A. obtusilobum from the New Hebrides does not belong to the above section, but is a hanging-basket plant too. It is a little creeping fern. From the base of the plant between the fronds grow some runners, which take root and produce plants which again produce other runners, until the whole is a network of runners and little plants. The fronds, six inches long and two broad, are finely cut, of a bright, shining-green color.

The section growing bulbils all over the fronds is represented by a few species only: A. bulbiferum from New Zealand and Australia is the best known and most widely cultivated. It is of rapid growth, has much-divided fronds of a dark-green color, and is very resisting. A. b. Fabianum is of the same appearance, is more finely divided, and richer in foliage. A. b. laxum is dwarfed, very leafy, and finely cut. A. Colensoii from New Zealand is a diminutive of bulbiferum. The fronds very crowded, six to eight inches long. At maturity they are all covered with young plants.

A. viviparum is from Mauritius. This fern has broad fronds, one to two feet long, three and four times divided in very fine segments. With its feathery appearance, it is certainly one of the nicest ferns. A. v. nobilis has fronds cut the same way, only the segments are longer and habit more drooping.

Amédée Hans

(To be continued.)

Bridesmaid's Hat

These hats were particularly appropriate for the gowns that were worn at an early spring wedding, and to be most effective should be carried quite carelessly. Some people thought the Japanese plum blossoms, for this arrangement, were even better than roses, carnations, violets, or lilies of the valley.

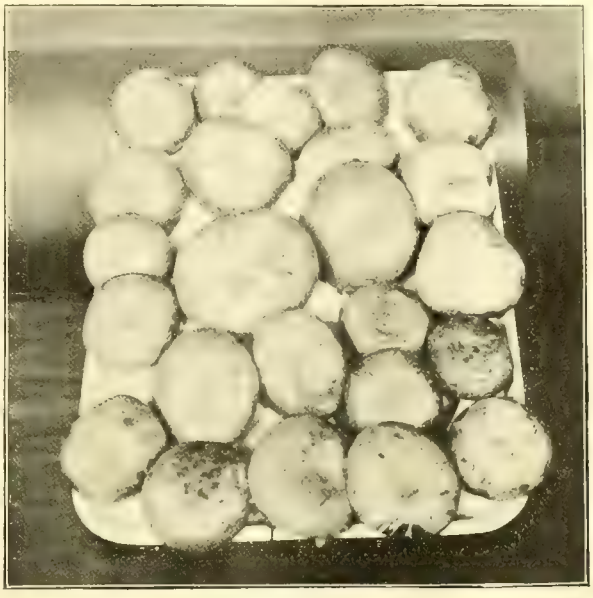
W. H. Battles,

A Practical Help

We hope you will like HORTICULTURE and recommend it to your friends in the trade. We want to see on the list of subscribers every one identified with any horticultural industry. We draw no lines, but *invite you all* to help by your subscriptions, your contributions, and your approving words to make HORTICULTURE the best known and the best liked professional journal in our country. Every $1.00 subscription sent in is a *practical help* to this end.

Please Appreciate

A special advantage given to advertisers in HORTICULTURE, *without charge*, is the Buyers' Directory which tabulates the advertisers in each issue of the paper under the respective heading of the goods offered. This is a convenient ready reference for buyers, and its value to advertisers is obvious, being in fact a *double* announcement without extra cost.



Mushrooms

As we are all painfully aware there are many fungi which are injurious to crops, as carnation rust, violet-leaf spot, rose mildew, and a host of others too numerous to mention; but, as in nearly every large family of the vegetable world, there are members which are distinctly friendly to man, and the edible mushroom (Agaricus campestris) is one of these.

From September to January is the best time to start a bed, but it is not too late to make one up even now, which will give fair returns before hot weather. Of course the best markets will pay a smaller price.

The material for the bed is fresh horse droppings, free from long straw, sawdust, shavings, or material of a similar nature. This is put in a pile under cover, with one part good meadow loam to four parts of manure, and turned every day for ten days By that time it should be ready for the beds. These are made under greenhouse benches, in caves, cellars, or sheds where the temperature doesn't fall below fifty degrees at any time. The least desirable place is under the benches, because of the drip, but still good results can often be obtained there. We have one bed of about 60 square feet, from which over forty pounds have been taken, and this is under a bench. The beds are made 12 inches deep by putting layer after layer of the prepared material, packing each layer firmly into place. A thermometer put into the finished bed will run up to 100 degrees or more in the course of a day or two, and then begin to fall. After the temperature drops below 75 degrees the planting may be done.

The mushroom is propagated from mycelium or threads which correspond to the roots of higher plants, these filaments being grown in horse manure, which is in flakes or pressed into bricks. This is spawn. One kind giving great promise is Columbia, of American manufacture. The grower breaks these bricks up into cubes about two inches in size and puts these into the bed 2 inches deep and 10 inches apart, pounding manure firmly down upon them. No further care is required until by digging up a chunk, white threads are to be seen running into the surrounding bed.

Prize-winning Mushrooms

Grown from Pure Culture Spawn, by Stevens & Co., Dedham, Mass.

"Casing" follows this appearance of the threads, and consists of covering the bed with an even layer of good, light, garden-soil to the depth of one inch.

In six weeks the first mushrooms appear, and from now on the bed will bear steadily for several weeks, if the conditions are favorable. The temperature should remain at 55 degrees, both day and night, if possible, and the whole bed darkened from the first. After the bed begins to bear it may become so dry as to necessitate watering. If the water is at 90 degrees, no harm will result.

Mushrooms are plucked when the frill opens, showing the gills by gently twisting the cap. They are not washed, merely the base cut off, and then all packed in receptacles holding one pound and shipped to market.

Telephone, Oxford, 292 BOSTON, MASS.

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The meeting and exhibition of the American Rose Society at Boston is now only three weeks away. Much quiet but effective work on behalf of this event has been done by the friends of the society and the queenly flower to which its allegiance is pledged, and assurance is now given of an exhibition and enthusiasm which cannot fail to awaken renewed ardor and materially advance the interests of rose cultivation as a pastime or as a profession. Boston is prepared to make good her promise of an exhibition such as has never been seen in this country, and she is also eager to extend to the visitors who may honor her with their presence on this occasion a hearty welcome.

The *Florists' Exchange* comments approvingly, as did Horticulture in an earlier issue, on the evidences of increasing activity and interest in club and society work at the present time, and observes further that prosperity in these organizations depends largely upon the selection of men for office who are willing to work. To this proposition we heartily agree. When you hear of a club run down and unable to secure a quorum at its meetings, the cause will almost invariably be found as above indicated — in the incompetency or neglect of its responsible officials. A man imbued with the right spirit and willing to do unselfish work, can make a success of any club or society. A club encumbered with the other kind is to be pitied.

Conceding that a large proportion of the funeral designs carried daily through the thoroughfares leading to the cemeteries in the big cities are a humiliating end for good flowers to come to, yet so long as the custom continues of sending these funeral tributes, undertakers and others handling them should be forced to accord them better care than they do in the majority of cases. Floral pieces are gathered up by armfuls, thrown haphazard into open vehicles, often in a winter atmosphere, and, carried through the streets in this condition, are not the least pitiable part of the sad procession. Without considering the tender sentiments these offerings are supposed to voice, the florist should, for the credit of his own profession, insist that they receive decent treatment. The abuse complained of is on a par with the "crepe chaser" nuisance and the use of second-hand wire frames from the cemeteries. All three are live subjects for florists' club attention.

The news of the death of John Spalding, the grand old man of New London, Conn., brings with it a flush of sadness, for the passing of such a man, even though at the ripe age of 91 years, comes always too soon, and we realize that horticulture and humanity are poorer because of an inevitable loss. Mr. Spalding was a true representative of the highest type to which the gardener may aspire, — a man full of kindness and sunny disposition, whose life was a blessing to all who came in contact with him. The story of his long and useful life, — from his infancy in Woodside, Scotland, until the last two years during which he has sat, cheerful and resigned, in utter blindness; of the many pathetic struggles, especially of his early days; of his love for the work, inherited from a father who must have been just such a man as himself, — was always profoundly interesting as he told it and loved to tell it. He never was known to speak an uncharitable word of his fellow-man His was one of simplicity and loving service, the life of a noble man.

Among the complaints regarding market values heard this season, the Lawson carnation figures prominently, disappointment being freely expressed by growers because this flower did not reach the prices of former years. The cause of the decline is undoubtedly due to the growers themselves more than to any other agency. Growers are too often influenced by current prices in planning for their next year's crop and plant heavily of that variety which is the most profitable for the time being, overlooking the certainty that other growers will think and do precisely the same thing with the result that, as has been the case with Lawson, the quantity of one variety is away out of proportion to the necessities of the market, and the inevitable follows. Certain flowers we have in mind are reputed to have turned in the best profits the present season. For the reasons above alluded to the wise grower will think twice before planting heavily to those varieties. The habit of imitation is apt to prove a costly one, for because of it many growers are always one year behind the best prices. He who thinks for himself — who thinks ahead rather than backwards — and who has the courage of his convictions is the one who gets the cream usually.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

Horticulture is certainly a great paper, and I wish you all the success you deserve. — H. T.

Enclosed please find my check for $1 to cover the cost of your most valuable Horticulture for the year 1905. I sincerely hope that success is with you every day. If I can do anything for you in this town just sing out. — G. A.

After Adjournment

'T were better to send a cheap bouquet
To a living friend, this very day,
Than a bushel of roses, white or red,
To lay on his casket when he is dead.
Anon.

The Philadelphia Cut Flower Company's blotter, "A Message For You," with its adornment of arrow-pierced hearts and busy Cupid, was a piece of good advertising, well directed, intelligent, artistic, and useful.

The Eastern Nurseries, Jamaica Plain, Mass., are sending to their patrons a beautiful little calendar, hand-painted in colors, the Rhododendron maximum being the decorative subject. This useful evergreen shrub is a leading specialty with the Eastern Nurseries.

Mrs. Anne Weightman Walker added $2 to her fortune of $60,000,000 by winning prizes for the best beans, primroses, and mushrooms displayed at the annual meeting of the Pennsylvania Horticultural Society, in Horticultural Hall.

J. Vaughn Merrick, a millionaire, likewise won $1 for cultivating to perfection the modest primrose. — *N. Y. Herald.*

Who said there was no money in growing flowers?

The florist's clay pig which you could make into a porcupine by growing grass spikes on it, has been improved on by a Broadway dealer. He sells a head made of terra cotta, furrowed on top and over the eyes. Soaked in water until thoroughly wet, fine grass seed is put into the furrows. In a few days a fine crop of green hair and eyebrows will appear. From the varied assortment of physiognomies astonishing results may be obtained. — *New York Sun.*

Fix up a few for St. Patrick's Day.

THE HOME OF THE GARDENIA

The home of the Gardenia as a cut flower in this country may safely be said to be located at Sharon Hill, Pa., a suburb of Philadelphia, where Robert Scott & Son have many houses devoted to its culture. William K. Harris, Robert Craig & Son, and a few others have gone into growing this fragrant, popular favorite in a limited way; but the Scott firm was the first and is now the most extensive. They started some four years ago, and after various and vexatious disappointments with varieties and methods of culture at last succeeded, and are now recognized as the leaders in this specialty.

Pot culture seems to be preferred, although we observed that one of the houses was benched. The explanation seems to be the ease of handling pots, for forwarding or retarding growth as occasion demands; they can be so easily shifted from one place to another, and just the right conditions given to produce results. Besides this there is some little demand for the plants in bloom at Christmas and Easter. A seven-inch pot plant well done has from ten to twenty-five flowers; a ten-inch, from thirty to sixty. A variety called Grand Duke is regarded by Mr. Swartz, who has charge of this department, as very promising. It has larger foliage, larger flowers, and is altogether more robust and vigorous.

"In regard to the treatment of Gardenia," Mr. Scott says, "we have no special culture for them; we just grow them strong in the summer, let them go dormant for a month, and then start them up at a temperature of 60 to 65 degrees, and flower them at 70 degrees, giving them feed when the buds show."

Other features of interest at the home of the Gardenia were a fine lot of Crimson Rambler roses in pots for the Easter trade; house after house of American Beauty and Liberty roses; houses of Brides, Bridesmaids, and Kaizerin, the latter just planted, being intended for a pre-Easter crop; many houses of young stock for the mail trade such as geraniums, roses, carnations, violets, chrysanthemums, and so forth; and last, but not least, an immense lot of grafted roses — young stock on the propagating benches, — especially noticeable among same being American Beauty, which looked very strong and flourishing.

Charles D. Ball, who accompanied us, was particularly interested in two things — (1) a house of Adiantum Croweanum and (2) the pile of hard coal. Mr. Ball does not now grow ferns to any extent, and he has used soft coal since the strike. We are promised a declaration of independence, facts and figures, whys and wherefores of this soft coal proposition at an early meeting of the Florists' Club, and we will all be glad to hear what this close observer and reasoner has to say on the subject.

We did not see the usual house of new Irish roses this year. As is well known, the Messrs. Scott are American agents of Alexander Dickson & Sons of Newtonards, and have handled most of their notable introductions of the last ten or twelve years. The only new thing we noted in the rose line was one called Admiral Dewey, or Admiral Schley — not sure which — but it is fine. About same color as the Lawson carnation, exquisite in the bud, which is long and pointed, shows a bit of the Testout style when full blown, and looks promising.

In saying adieu we must not forget to pay our respects to Miss Gloster. Mr. Scott calls her "the best man on the place," and that's a fine compliment. Miss Gloster has presided over the office for a good many years and has done it well. We could say a good many fine things about Miss Gloster, but her employer's remark covers the ground so completely that it is impossible to improve on it. — G. C. Watson.

Personal

Joseph N. Lipman has resigned as gardener at the S. V. R. Crosby estate, Manchester, Mass.

John T. Withers has accepted a position as manager of the Shatemuc Nurseries, Barrytown, N. Y.

Thomas Knight, representing Julius Roehrs Company, Rutherford, is on a business trip to Manitoba.

Visitors in Boston: B. Suzuki, John Ringier, and L. B. Craw, New York City; Paul Berkowitz, Philadelphia.

J. R. Shield, who has charge of the estate of the late Mrs. J. B. Crane at Dalton, Mass., has been appointed to the superintendency also of the adjoining estate of F. G. Crane.

Martin Simmons, who has had charge of the greenhouses on the F. G. Tefft estate for several years, has resigned his position and accepted a similar position on the Capt. John S. Barnes place, Lenox, Mass.

The jury list of Ward 11, Boston, contains the names of Ed. Hatch and Prof. L. C. Elson. The former the Boston *Journal* calls "prince of bon-vivants and story-tellers," and the latter, "most humorous of musical critics." Both are pretty well known to a large section of the horticultural fraternity.

PHILADELPHIA PERSONALS

We hear of many of the craft on the sick list at present, among them the veteran, William K. Harris, John H. Dodds, C. E. Meehan, Edwin Lonsdale, John Nisbet, and D. T. Connor.

J. Wolff Moore, the Columbia Ave. retailer, has been coming rapidly to the front of late as a decorator for large affairs, not only in the city proper, but among the suburban four hundred. In thus branching out, Mr. Moore is now being ably seconded by Charles F. Edgar, who will be remembered as a figure in the commission business up to last fall.

NEWPORT PERSONALS

Seldom indeed have so many expressions of regret been heard as the death of Farquhar Macrae of Providence gave occasion to. Mr. Macrae was well and favorably known in Newport, being in former years a conspicuous figure at all the exhibitions of the Newport Horticultural Society, besides acting as judge on several occasions. He was much respected by all with whom he came in contact, and news of his death came as a shock to his many friends here.

Visitors last week were Henry T. Moon of the Glenwood Nurseries, Morrisville, Pa., who was here last week in the interests of the firm, and Frank E. Conine of Stratford, Conn., who seemed to be pleased with the appearance of outdoor roses in Newport. There are many dead ones. Dead roses are sometimes of passing interest to those who have good, live ones for sale. Also Fred W Smythe, of Wadley & Smythe, who came to look over the work his men are engaged in. He is very optimistic with reference to the coming summer in Newport.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ROSE SOCIETY

Complete schedules for the approaching rose exhibition at Horticultural Hall, Boston, have been mailed to all members of the American Rose Society, and inclosed with each schedule an entry card. All others not members of the Society can have copies on application to the secretary. The number of special premiums is large and an exhibition of unprecedented diversity and beauty is assured. M. H. Walsh's display of Rambler roses alone will be worth crossing the continent to see, and every one interested in the rose, commercially or otherwise, should take advantage of this opportunity to see a superb exhibition and meet the foremost rosarians of America. Come yourself and bring an exhibit with you.

Exhibits may be sent, prepaid, care of William Nicholson, Horticultural Hall, Boston. For the convenience of exhibitors at a distance, Messrs. Welch Bros., 15 Province St., Boston, have generously placed their refrigerators and other conveniences of their establishment at the disposal of exhibitors who may, if they so desire, ship their boxes in advance to Welch Bros.' care, giving explicit instructions by mail as to what disposition they wish made of them, — whether the boxes are to be kept unopened, or whether the flowers are to be taken out and placed in jars of water until required. All instructions will be carefully complied with.

WM. J. STEWART,
Secretary.

11 Hamilton Place, Boston.

HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY

The annual carnation exhibition of this Society, February 21st, at the Court Room, was a very fine exhibit, and had a large attendance. In the competitive classes awards were made as follows: —

25 Lawson, F. Boulon & Son, 1st; Walter Shaw, certificate. 25 light pink, Robert T. Hillock, 1st; F. Boulon & Son, 2d, both Enchantress; J. N. May, 3d, with Phyllis. 25 White, F. R. Pierson, 1st, White Lawson; H. T. & A. H. Funnell, 2d, Queen Louise, J. N. May, 3d, The Bride. 25 Scarlet, F. R. Pierson, 1st, J. D. Cockcroft, 2d, both Flamingo. 25 Crimson, F. R. Pierson, 1st, Daheim; H. T. & A. H. Funnell, 2d, Harlowarden. 25 any other variety, Thomas Eccles, 1st, Prosperity; F. Boulon & Son, 2d, Mrs. M. A. Patten; F. R. Pierson, 3d, Variegated Lawson. For roses Walter Shaw took 1st for 12 Bridesmaids and for 12 Liberty. Double violets, H. T. & A. H. Funnell, 1st, William O'Hora, 2d. Single violets, F. Boulon & Son, 1st, Walter Shaw, 2d. Certificates were awarded to the Cottage Gardens for Lieut. Peary and for Robert Craig; also specials for Octoroon, Ethel Ward, and Enchantress. Certificate to James D. Cockcroft for splendid seedling crimson. A vase of White Lawson, not for competition, was exhibited by Charles H. Allen.

The committee very much regretted that, probably through an error, the Cottage Gardens vases contained but 20 flowers instead of 25, as called for by the schedule, and so were disqualified from competing. They were very fine specimens and made a table not soon to be forgotten. Lieut. Peary is a most beautiful white and Robert Craig a splendid scarlet. John N. May's exhibit suffered a little in shipping, so The Bride did not show its full beauty. Other exhibitors who received awards were: —

Fred Keiffer, for mignonette; George Ashworth, for roses, carnations, and antirrhinum; Robert T. Hillock, for daffodils; F. Boulon & Son, certificate for tree violet plants; William O'Hora, for pot plants; H. T. & A. H. Funnell, for specimens Phœnix and Anna Foster fern.

A. H. FUNNELL, *Secretary.*

ST. LOUIS FLORISTS' CLUB

Our annual rose meeting takes place March 9th, 2.00 P.M., and in view of the success of our carnation meeting of last month we are looking forward for a tremendous exhibit, and are making preparations to meet the occasion.

The club has offered fifty dollars in prizes, and growers of new varieties are solicited to show their stock. Blooms must be grown by exhibitors. Growers of other flowers or novelties (plants included) are especially invited, and their product will be cheerfully accepted. Competent judges will be in charge. Roses will be judged according to American Rose Society scale of points. All stock becomes the property of the club, unless otherwise specified. Send all stock, prepaid, care of C. A. Kuehn, 1122 Pine street, H. G. Berning, 1402 Pine street, or F. M. Ellis, 1316 Pine street.

Classes	Prizes 1st	2d
1. 12 American Beauty	$7.50	$5.00
2. 25 Bride or Kaiserin	3.50	2.75
3. 25 Bridesmaid	3.50	2.75
4. 25 Chateney	3.50	2.75
5. 25 Gates or Ivory	3.50	2.75
6. 25 McArthur, Liberty, or Meteor	3.50	2.75
7. 25 Any Variety not mentioned.	3.50	2.75

In order that we might more display the meaning of "welcome" to our meeting, the committee has arranged for a jollification assembly to take place after our regular meeting, when we will follow our escort to a place where there will be good speaking and good others, "come," do your duty, and you will be given a full reward, as special orders have been issued; but before you leave home get permission to stay out after dark just this one time.

OTTO G. KOENIG,
J. J. BENEKE,
F. H. MEINHARDT,
Exhibition Committee.

Regular meeting second Thursday of each month, at 2.00 P.M., at 810 Olive street, 10th Floor, Odd Fellows Hall No. 2.

Members always expected to be present.

The latch string hangs on the outside.

NEW HAVEN CO. HORTICULTURAL SOCIETY

The New Haven Co. Horticultural Society at its regular meeting had as its chief feature a carnation exhibition. A very fine exhibit came from Frank Kimberly, florist of Townsend avenue. The exhibit from Mr. Murray, gardener of the Yale botanical gardens, especially of two very fine new seedlings, was excellent. James Bruce, florist of Kensington street, made a fine exhibit of carnations and roses. A. J. Thompson exhibited a fine collection and also his new pink seedlings. The collection from E. J. Morse, florist of Townsend avenue, was another pretty one. A very fine cinerara came from the Yale botanical gardens. A very fine specimen of asparagus was exhibited by F. Duffy. Frank Kimberly read an interesting paper on carnations, covering his experiences of various kinds, which he finds give best satisfaction.

Charles Kern, assistant superintendent of parks, gave a very interesting talk relating to the earliest appearance of the carnation which was known to the ancient Greeks, about 300 years before Christ.

WASHINGTON FLORISTS' CLUB

An exhibition of carnations will be held on March 7th, and exhibits are requested from all growers who have new or interesting novelties. All exhibits should be sent to the secretary, Peter Bisset, "Twin Oaks," Washington, D. C. prepaid and shipped to reach Washington not later than Tuesday morning, March 7th. At the same meeting new officers will be elected.

PETER BISSET, *Secretary.*

A bill authorizing the appointment of a master builders' examining board in the District of Columiba, and providing for the examination and licensing of persons as master builders and for other purposes, was prepared and forwarded to Congress by the Commissioners of the District, with a request for its passage. Its intent was to insure better building construction and a license fee of $25 was provided for; but unfortunately it covered repair work, as well, and its operation would compel the hiring of a master in all cases where repairs were required, and consequently a protest was entered by the Florists' Club of Washington, and with such success that the commissioners have recommended to Congress that no action be taken on this bill at the present session. As the position taken by the Washington Club will, doubtless, be of interest to the craft generally, we append a copy of their communication, in full.

WASHINGTON, D. C., Feb. 8, 1905.

The Honorable Board of Commissioners of the District of Columbia,

GENTLEMEN: — At a meeting of the Florists' Club of Washington, D. C., held on the 7th inst., the secretary was requested to write to your Honorable Board, and protest in the name of the Florists' Club against the passage of the Master Builders' License bill. If this bill becomes a law it will do great injustice to the florists of the District of Columbia, as they do most of their own repairing, building of greenhouses, setting up of boilers, etc. This they will not be permitted to do if this measure becomes a law. In greenhouse building the florist is better qualified to do his own work than are the master builders, who are advocating this measure, as the work requires a knowledge not possessed by the ordinary builder. And if the florist should build a greenhouse on contract, it would be sure to be built by a horticultural builder from some other city, as there is no such builder in Washington. Should this bill become a law, before such a builder could do any work he would be compelled to secure the master builders' license, and the cost of the same would have to be borne by the florist. It is the earnest desire of the Florists' Club that your Honorable Board shall do your utmost to defeat this measure.

Very respectfully submitted,
PETER BISSET, *Secretary.*

CHICAGO FLORISTS' CLUB

There was a good attendance at the meeting February 23, including a number of ladies. The special attraction was an address by E. G. Routzahn, of the Bureau of Civic Corporation, on "How to make Chicago Beautiful," illustrated by stereopticon views. He cited what others are doing to advance the love of plants, instancing the Cleveland schools, where the children can order flower seeds at 1 cent per packet, are taught plant arrangements, how to care for lawns, flowerbeds, and window boxes, etc., also the good work inaugurated by Mr. Patterson of the National Cash Register Co., and their boys' garden, where the youngsters can work off their surplus energy with a reward for their accomplishment. The billboard nuisance and neglect in our alleyways, with suggestions on improving by growing a few vines, beginning with morning-glories, the substitution of wire fence for board fences,

and window boxes for the slum districts were all touched upon. The florist, he said, should follow up the work of the improvement clubs, and make suggestions, and, above all, show the public the effect of simple planting around his own place.

MASSACHUSETTS HORTICULTURAL SOCIETY

On Saturday, March 4, A. Herrington, Madison, N. J., will deliver an address on "Some Aspects of Hardy Flower Culture," at Horticultural Hall. At the same time there is to be a notable exhibition of orchids, comprising upwards of thirty species, and varieties of dendrobiums in flower, by Peter Murray, gardener for W. P. Winsor, Fairhaven, Mass., also phalænopses and others from N. P. Craig, North Easton.

BUFFALO FLORISTS' CLUB

On Wednesday, February 22d, the Club had a successful meeting in Wm. F. Kasting's hall. The following gentlemen were nominated for the respective offices: —

Pres., L. H. Neubeck; Vice-Pres., C. T. Guenther; Cor. Sec'y, D. B. Long, and W. J. Peake; Financial Sec'y, E. C. Brucker; Treas., Charles H. Keitsch; Executive Committee, all the members in good standing. The election will take place in March. Wm. F. Kasting, Charles H. Keitsch, and Wm. A. Adams were appointed a committee to make arrangements for a little "blow out," and a good time is anticipated. We invite as many out-of-town florists as can join us on this occasion.

There was an excellent show of all the new carnations. Guttman & Weber showed Victory, scoring 87 points. W. J. Palmer & Son, Lancaster, red Lawson, 88 points. R. Witterstaetter, Cincinnati, J. A. Valentine, 87 points; Aristocrat, 94 points; Afterglow, 88 points; F. R. Pierson Co., Tarrytown, Variegated Lawson, 89 points; Daheim, 84 points. Their White Lawson and Enchantress showed up fine. J. Murchie, Sharon, Pa., Fred Burki, 85 points; also a few red seedlings, very good. Patten & Co., Tewksbury, Mass., Mikado, 84 points; undoubtedly would have scored much higher if the flowers had reached here in better shape. Charles Rooney, Jamestown, N. Y., Gladys, 87 points; it is a very good promising commercial white variety. C. W. Ward, Robert Craig, 93 points; Lieut. Peary, a fine commercial white, 89 points; J. D. Thompson Carnation Co., Robert Craig, 91 points; H. Weber & Sons, Oakland, Md., My Maryland, not in first class condition on account of being so long on the road, 87 points. Chicago Carnation Co. sent some White Lawson and Lady Bountiful, but they came too late for judging.

The judges were William Scott, H. J. Wise, and C. T. Guenther. All are well known to the trade, and we know they did justice to every exhibitor.

It is very interesting to the local craft to have these gentlemen respond so liberally as they did to our request for this special privilege of seeing these new varieties, — as Mr. Scott said in his last writing, for the sum of one dime (car fare). In behalf of the Buffalo Florists' Club, thanks are extended to all these gentlemen for their kind consideration in sending these novelties, and we also hope they will benefit by same mutually and commercially.

I also wish to mention that a few of the local growers, especially one private gardener, Mr. Venneman, who grows for George Urban, Jr., made a fine showing of 30 or 35 varieties of all the different types of carnations, demonstrating what some of these private gardeners can do with only a few plants of each kind.

F. G. Lewis, of Lockport, N. Y., also showed some nice Red Lawson, and some very fine Enchantress.

NOTES

The annual banquet of the North Shore Horticultural Society took place at Manchester, Mass., on the evening of February 24.

At the Germantown (Pa.) Horticultural Society on last Monday evening, John T. Morris gave an address on the gardens of Japan, illustrated with lantern slides.

Mr. P. J. Lynch, secretary and treasurer of The Dingee & Conard Co., West Grove, Pa., will deliver a paper on "Some Notes on the Newer Roses," at the meeting of the Florists' Club of Philadelphia, to be held Tuesday evening, March 7, 1905.

On Saturday, February 25, at Horticultural Hall, Boston, J. Woodward Manning opened a general discussion on the subject of flowers. Mr. Manning gave a very interesting talk on the exquisite products of the florists' work, giving in detail the flowers blooming in each month. A. A. Hixon, E. O. Orpet, W. N. Craig, T. D. Hatfield, W. H. Spooner, D. Finlayson, and others participated in the discussion.

CHICAGO JOTTINGS

The Howe & Taylor Mfg. Co. has leased a large section on the floor of the flower growers' market as a salesroom and factory of florists' wire work.

An important deal of much interest was the purchase by J. E. Jensen, formerly foreman at the J. D. Thompson Carnation Co., Joliet, Ill., and J. S. Dekema, from Matson & Kron, 631 W. Foster Ave., their establishment consisting of about 48,000 feet of glass, built less than two years ago. The 6 houses are each 26×260, excepting one house, which is 30 feet wide. The entire plant is devoted to carnations of the best varieties in charge of Mr. Dekema, who was the grower for their predecessors. The site is of considerable area and will allow for future expansion and sufficient space for planting. Messrs. Jensen and Dekema are graduates of Peter Fisher. Mr. Jensen recently returned from a business trip west, visiting Denver, Salt Lake City, Ogden, San Francisco, Seattle, Spokane, and St. Paul, and returned with a fat order book. Everywhere he heard compliments for HORTICULTURE.

Hon. Dennis E. Gibbons of Lake County, Illinois, introduced a bill in the legislature to provide an appropriation of $20,000 to be used in 1905 and $10,000 in 1906 for the use of the agricultural experiments station of the University of Illinois, the appropriation for 1905 to include the bill for greenhouse construction at the above experiment station, and recommending an advisory board of five to be appointed by the Illinois florists to help. The Chicago Florists' Club delegated the following committee to the legislators to support the bill which came up before the appropriation committee of the house on Wednesday, March 1.: W. N. Rudd, P. Foley, Leonard Kill, J. Hartshorne. Other Illnoiis representatives are F. Ammann, Edwardsville, Ill., G. Kuhl, Pekin, Ill., and H. W. Buckbee, Rockport, Ill.

A PRIVATE PLACE BECOMES COMMERCIAL

The greenhouses of Walter P. Winsor, Fairhaven, Mass., were opened to the public from February 22 to February 26, inclusive. It has been Mr. Winsor's practice for several years past to offer this treat to the public, and from 5,000 to 7,000 visitors have annually enjoyed it.

Among the attractive features are, a fine bench of cinerarias, several benches of amaryllises, hyacinths, and other bulbs, arranged with crotons and other foliage plants, and many other things to be found in a well-appointed greenhouse collection. The drawing cards were, the Winsor Pink, raised by Peter Murray, gardener, and which will in due time be marketed by F. R. Pierson Co., and the fine collection of orchids. Five first class certificates of merit, four silver medals, three gold and one bronze medals, granted by the Massachusetts Horticultural Society, testify to the quality of the orchid collection. Mr. Murray also received honorable mention for a seedling fern — Adiantum Murrayanum. In addition, in the potting house may also be seen a long string of first and second premiums won at the annual shows held at New Bedford.

Mr. Winsor has from his youth been an enthusiastic lover of exotic plants, and lovers of horticulture will regret to learn that he is disposing of his valuable collection, and giving up his greenhouses; also, that Mr. Murray, who has, for nearly thirteen years so successfully managed the greenhouses, has abandoned the pursuits of horticulture as an art, for the pursuits of commerce, he having leased the greenhouses from Mr. Winsor, and will grow high-class goods for wholesale market.

THOMAS WHITE.

CATTLEYA SUSANNÆ

From the Report of Committee of the Gardeners' and Florists' Club of Boston

This new hybrid cattleya exhibited by E. O. Orpet of South Lancaster, Mass., is the result of crossing the two-leaved Cattleya Skinneri with C. Warneri, the aim having been to increase the size of blooms in the former and give added flowers to the latter. Your committee believes that this has been accomplished, and for the first time in either Europe or America, there being no knowledge of its having been shown before, hence the recognition given.

In habit the plant is exactly intermediate between the two parents, the bulbs being two-leaved as in Skinneri, and having the peculiar bronzy tint of Warneri on bulbs and leaves. The flower spike is stout and carried well above the leaves, producing at the first flowering five to six flowers per scape. The individual blooms are about double the size of C. Skinneri, but a trifle paler in color, the color being uniform through the petals without any accentuation in the lip, as might have been expected from the use of C. Warneri as a pollen parent.

OBITUARY

Ferdinand Mangold, superintendent of the Gould estate at Irvington, N. Y., died on February 18, aged 77 years. He was a gardener of the old school, a plantsman of highest ability.

Outdoor Art and Craft

Allan Chamberlain has declined renomination as tree warden of Winchester, Mass.

A bunch of web and leaves at the tip of the branch is the winter nest of the brown-tail moth. Cut them off and burn them at once. A fuzzy, yellowish patch on the rough bark, on the sheltered side of a stone or other object is, in all probability, the egg-mass of the gpysy moth. A brushful of creosote will finish it. All so easy, all so simple, if only everyone would do his share.

The exigencies of the moth plague have developed a new industry in the neighborhood of Boston, whereby contracts are taken for the clearing of property from the brown-tail nests by expert tree climbers, equipped with spurs and all the latest machinery for climbing and clipping the nests from the highest trees. The company furnishes all the equipment and also insures the men against accident. The charge is $10 a day for a gang of three men.

News Notes

It is reported that good samples of asbestos have been found in the country west of Lake St. John, Province of Quebec.

The old Clinton market in New York City has again been placed at the disposal of the plant growers for the spring season.

The boiler in the greenhouse of E. A. Brigham, Grafton, Mass., exlpoded on February 18th, doing a damage of between $400 and $500.

The funeral of Farquhar Macrae, whose obituary appeared in our last week's issue, was held on February 24th, at his late home, in Providence, R. I. The house was well filled with relatives and friends, among the latter being numbered a goodly representation from the Florists' and Gardeners' Club of Rhode Island, and the Horticultural Society.

The casket was surrounded with a wealth of floral tokens of esteem and affection, nearly all from floral concerns, in this and other cities, with which Mr. Macrae had been associated in business. Among others was a very large wreath from the Rhode Island Florists' and Gardeners' Club.

The bearers were Alexander Rennie, William E. Chappell, Thomas J. Johnston, and Michael Sweeney. The body was entombed in Swan Point Cemetery, where the new receiving tomb was lavishly decorated with pot-plants by superintendent Timothy McCarthy.

"It is an ill wind that blows nobody good."

The wind, ill or otherwise, blew down a nectarine house on the William Waldorf estate at Newport about a month ago. Now the Lord & Burnham Co. have received the contract to build a new one, — an up to date structure; the old one was not up-to-date. This applies to the structure, and not to the fruit grown there. Many a good nectarine had its being in that little old house.

Westville, Conn. — T. C. Benedict, one house.

Chicago. — Jacob Philipp, five houses, each 20 x 150.

Mamaroneck, N. Y. — C. J. Schelling, range of conservatories.

De Haven, Pa. — A. T. Lorch, range of houses for fancy carnations. Three, 150 feet long each; two, 200 feet long each

J. Henry Bartram, Lansdowne, Pa., has awarded the contract for the material for two new rose houses, 35 × 200, to the Lord & Burnham Co. Dennis T. Connor, who secured the order, reports business in this section as excellent and prospects bright.

LIST OF PATENTS

Issued February 14, 1905

782,292. Vegetable or Fruit Slicer. Waldemar Walter and Frank Walter, Philadelphia, Pa.

782,461. Lawn-Hose Support. Henry S. Parker, Elreno, Okla., assignor of one half to James F. Matthews, Elreno, Okla.

782,561. Greenhouse or Other Structure. Edward W. Hitchings, Montclair, N. J.

782,754. Fruit-Picker. George W. Merker, Belleville, Ill.

Issued February 21, 1905

783,182. Means for Heating Hotbeds. Amand De Meyere and Charles De Meyere, Brussels, Belgium.

783,241. Truck for Use in Transplanting Trees. Peter Bisset, Washington, D. C.

783,267. Blast-Controlling Device for Seed-Cleaners. Jonathan Harris, Cleveland, O.

783,324. Pruning-Hook. Ernest D. Snyder, Mercer, Pa.

783,359. Asparagus-Cutter. James O. Bowden, Wilmington, N. C.

783,387. Broadcast Seeder. Luther E. Roby, John L. Jones, and Harvey V. Gibson, Peoria, Ill.

The new British patent law, passed in response to a long-standing and urgent demand for reform, came into full operation on January 1, 1905. It is a matter of considerable importance to American inventors, as for many years past about one fifth of the patents issued by the British office have been to Americans. In 1903 the total number of patents granted by Great Britain was 15,718, of which 3,466 were to Americans.

GLASS-WORKERS' STRIKE IN BELGIUM

(From United States Consul Roosevelt, Brussels, Belgium.)

In February, 1904, manufacturers of glass in the district of Charleroi combined for defense and for the reduction of wages. Conditions were placarded in their respective works May 1, 1904, and became fully operative September 1.

Workers in cold glass (cutters, packers, box makers, and helpers) decided to boycott certain manufacturers, and on May 1, 1904, a partial strike was declared in the window-glass industry, which, except at five works, became complete on September 1. All negotiations toward a settlement of the difficulty have been fruitless. The one insurmountable obstacle to an amicable settlement of the strike and resumption of work on the conditions placarded May 1 now seems to be — at least so it is asserted — the rivalry between the head of the union of workers in hot glass (blowers, flatteners, stretchers, and helpers) and the head of the union of cold-glass workers. The strike affects about 10,000 men.

PITTSBURG MARKET REPORT

As is usual at this season of year, Pittsburg has been enveloped in fog and smoke. The sun made a poor attempt at showing itself on only part of two days. It has been very trying for local growers, and with the exception of bulbous stock, everything is coming in very slow. The market during the past week has remained much the same as previously reported; the supply is still large, and plenty of good stock is obtainable at all the wholesale houses, with the exception of best fancy Beauties and Liberties. General stock of carnations are plentiful, with exception of good whites.

Several shipments of flowers to this city of late have arrived in bad condition; some boxes during the severe cold spell had only, for protection, one layer of paper. The writer on one occasion saw a box of Beauties being opened, and they were frozen so hard that they had to let them remain in the box rof several hours to thaw out. I understand they immediately wired condition to shippers. Year after year we have the same complaint from commission men and retailers who receive large shipments, and especially during holidays from growers not over-scrupulous. The damage done to the trade by this carelessness is incalculable, besides destroying the confidence and friendship which ought to exist amongst the craft.

David D. Howells.

NEWPORT MARKET REPORT

The condition of the market is quiet. The stock is good and there is a fair demand for this season of the year, but Newport is a peculiar place in this respect, and people unacquainted with it would hardly credit the fact that the aggregate sales of the past two months would not much exceed the amount spent in one day for flowers in the summer. For this reason florists are in no wise worried, neither are the commission men and growers in Boston and New York, who know they have Newport to fall back on in the summer. Scarcely a third of the flowers used here in the summer are grown in Newport.

On account of an accurate prediction of a cold and protracted winter, many grape growers are thankful they did not start early, as the prices received in recent years do not seem to have made up for the enormous amount of coal necessary for very early grape forcing. James McLeish, however, has three graperies well under way. One will soon be in flower; even at that he is much later than has usually been the case with him.

CINCINNATI MARKET REPORT

Business for the past week was good. The stores did a good lot of funeral work, this line of trade constituting nearly all the business done, as the weather conditions have remained very bad all through the week, thereby killing the usual transient trade. Bulbous stock is now coming in with more than enough to supply the demand. Roses and carnations remain a little short, there being a good demand for the white sorts.

PHILADELPHIA MARKET REPORT

Beauty and Liberty market past week, healthy and brisk. Stock good, but scarce. There is some outside demand in addition to local requirements. Boston has been calling for good stuff, notwithstanding the fact that fancy Liberties are twelve there to thirty here. Brides and Bridesmaids are in grand shape and plentiful. Prices a shade easier, if anything. Quite a few Golden Gates are coming in and are selling very well. Carnation market in pretty fair shape, last week demand not quite so brisk, but supply shortened up considerably, which prevented any extensive break. The notables for quality recently seem to be Flamingo and Adonis — the latter, however, not in large supply. Mr. Haines of Bethlehem has a good scarlet. S. S. Pennock thinks it will be a winner if it keeps as good as what he has been receiving from its raisers recently. Violets not going much better. Orchids scarce, but enough for demand. Lily of the valley moving in fair shape, but quality at present not quite up to standard. Roman hyacinths shortening up, and not extra quality. Daffodils very plentiful. Tulips going better, especially the choice varieties, like Couronne d'Or, Tournesol yellow, Vermillion Brilliant, and Kaizer Kroon. Other regular lines going fairly well, except callas, which are slow. On gardenias, prices have sagged on account of big receipts. At rates now ruling, this item should come into more general use.

CHICAGO MARKET REPORT

Liberal receipts gave to the market a downward impetus last week, from which it could not wholly recover, although there was considerable change for better by Friday and Saturday. American Beauties, although of inferior quality, are holding to the top prices of the last two weeks, especially in the select grades. The quality is not good, this fact being a contributing factor toward stiffening values. Brides and Bridesmaids, on account of the increased supply, are tending downwards. Quality is very good, and some growers report the season's cut averages 50 to 60 per cent in favor of the select grade. Liberty, Meteor, and Mme. Chatenay are slow, and showing effect of the strong sunlight. Carnations are increasing in supply, with a fair market, and the demand for white is now easily met. On roses, carnations, and violets, values are such as to give satisfaction to street venders generally. Some of the wholesalers called last week's market 25 per cent better than the previous week, and cited sales to prove their contention, while many declared the advance would not be over 10 per cent.

NEW YORK MARKET REPORT

General trade in cut flowers is only fair, and, as supplies are increasing, prices tend downward all along the line. Roses are more plentiful and prices are receding. Carnations are in more than sufficient supply. Violets are selling, but at low figures, the bulk of the stock finding its outlet on the street. Lilac, tulips, daffodils, and miscellaneous flowers are abundant. The stock most easily sold at present is smilax, asparagus, and adiantums.

BOSTON MARKET REPORT

A reaction has set in and the flower market is weakening rapidly, with the prospect of a slump next week when Lent moves in. Growers bringing their flowers to the early markets find it sometimes necessary to carry them home again, and stock is accumulating in refrigerators. The increase in supply applies to all lines.

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

April 1st is the date of the Parcels Post convention between the United States and Great Britain.

PHILADELPHIA, Feb. 27. The mail seed trade, taking the country over, is reported to be 25 to 50 per cent. behind last year for the season. The bitter winter is having its effect. "The rush" will be a terror when it does come. We hear of a local house that had an order for eight thousand pounds of sweet peas the other day for Chicago. Looks as if those supply houses were at least *expecting* to do some business.

SEEDS IN SOUTH AMERICA

As compared with the average seed catalogues, as we know them, a South American seed catalogue, which I happen to have before me, seems to be a not so very large one. Nevertheless, considerable "getting off" of seeds is done in South America by European firms, and sold by the local seedsmen. Speaking of the South American seed trade in general, it must increase rapidly, as these states are coming more into the sphere of higher civilization with all its refined wants and necessaries, such as flowers and vegetables, and this at a rate which will increase rapidly, as the northern countries are getting filled up by settlers. Another reason is the low price of the tropical and subtropical products — coffee, for instance, — since the agricultural development of Africa and tropical regions in other continents. Again, the cities, formerly the abode of a feudal class in close connection with extensive plantation interests, are being transformed rapidly into manufacturing communities with a modern urban civilization and taste. These causes hasten the transformation of tropical plantations around the populous towns and cities into modern vegetable and fruit-growing farms, and our seed merchants will do well to give their attention to this growing market.

Although northern-grown seeds will produce average good plants, flowers, and fruit, even in the high temperatures of the subtropics and adjoining countries, it is a fact that these will not produce seeds again, which, on their part, will produce plants of any quality. The degeneration seems to be so rapid as to allow not even the use of the first seed crop matured in these climates. Some European firms have taken notice of these facts: T. C. Schmidt in Erfurt, Germany, for instance, is putting up special seed-boxes for tropical uses, grown and warranted as to good keeping and reasonably sure germination. And I understand that some English and French firms are doing the same.

GERHARD BLEICKEN.

CATALOGUES RECEIVED

Archias' Seed Store, Sedalia, Mo. "Garden, Farm, and Poultry Annual" with wholesale prices. Full of illustrations. Colored cover.

J. G. Harrison & Sons, Berlin, Md. Eighteenth annual spring catalogue of strawberries and fruit trees. Looks like a business getter.

Forest Nursery & Seed Co., Irving College, Tenn. Wholesale trade lists of ornamental deciduous and evergreen tree and shrub seeds and collected seedlings.

Charles Black, Hightstown, N. J. Wholesale catalogue of fruit and ornamental trees and plants. Includes the Ward Blackberry, "A New Jersey Wonder."

Nathan Smith & Son, Adrian, Mich. Descriptive catalogue of the latest novelties in chrysanthemums, carnations, cannas, geraniums, begonias, and hardy perennials. A valuable pamphlet that every florist should send for.

Thomas Meehan & Sons, Inc., Germantown, Philadelphia, Pa. "Hardy Plants Worth Having." A book, more than a catalogue. Handsomely illustrated and full of interest for everyone who appreciates the hardy garden.

Sander & Sons, St. Albans, Eng. List of hybrid cattleyas, lælias, and lælio-cattleyas. About two hundred and fifty registered crosses. These to be followed by later offers from some thirty houses of hybrids which are constantly coming into flower.

BUFFALO MARKET REPORT

The market in cut flowers has been fair. Roses are getting plentiful enough to supply all demands; so are carnations and violets. Bulbous stock, as always, enough for everybody.

Recent callers in Buffalo were W. Hageman of New York, Robert Fulton, of Henry & Lee, New York, Mr. Scott, of Vaughan's Seed Store, Chicago, and Charles Loechner, of Suzuki & Iida.

BUSINESS CHANGES

W. J. Good is about to start a bulb-farm at Seattle, Wash.

N. R. Swan has opened a retail flower store at Lima, O.

The Cleveland Floral Company of Cleveland, O., has gone into receivers' hands.

The California Carnation Company, Loomis, Cal., has been sold to Johnson & Taylor.

F. E. Keyes succeeds to the business of his father, the late C. A. Keyes, at Worcester, Mass.

Leifer Bros Co., has been incorporated as seed and implement dealers at Little Rock, Ark.

Sigmund Geller, dealer in florists' supplies, 108 W. 28th street, New York, has made an assignment.

Keene & Foulk of Flushing, N. Y., have dissolved partnership. The Bloodgood Nurseries will be continued by Mr. Keene.

CHICAGO TRADE TOPICS

The American Peony Society will hold an exhibition at Chicago, about June 15, 1905. J. B. Deamud was selected to superintend the show. Meeting place has not yet been decided upon.

Daily consignments of gardenias are now offered on the Chicago market. Orange blossoms can be secured on two days' notice at McKellar's and E. F. Winterson Co.

LOUISVILLE MARKET REPORT

Business conditions the past week were more encouraging. The supply of and demand for carnations and roses is satisfactory. Violets have been called for very heavily.

The carnation and rose show, to be held in connection with the next regular meeting of the Kentucky Society of Florists, will be held March 7th, at Nanz & Neuner's store.

ARTHUR COWEE
MEADOWVALE FARM, BERLIN, N. Y.

CLEMATIS MONTANA GRANDIFLORA

Clematis Montana Grandiflora

A variety of Clematis which, when better known, is destined to become as popular as Clematis Paniculata, its main value being in the fact that it flowers in advance of all other hardy climbers, frequently beginning to expand its flowers as early as the last week in April, continuing well through May. These flowers are from 1 1-2 to 2 inches in diameter and of a pure white color, and are produced in such masses as to completely hide the plant, which is of remarkably strong vigorous growth and insect and disease proof.

JOHN G. ESLER, Saddle River, N. J.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

Hot-House Grape Vines

ALICANTE, berries large, round, large bunch. Late keeping.

APPLEY TOWERS, fine black sort, following Black Hamburg. Excellent flavor.

BLACK HAMBURG, the most popular grape in cultivation. Berries large, roundish-oval, juicy and rich.

GROS COLMAN, monstrous, round berries, juicy and sweet. Not good until fully ripe in late autumn.

GROS GUILLAUME, Barbarossa. Berries large and round, juicy and sweet but rather flat flavor. Very late.

MADRESFIELD COURT, berries very large; of true muscat flavor. Rich and excellent.

LADY DOWNE'S SEEDLING, large oval berries of rich aromatic flavor. Dark purple. One of the best late sorts.

MRS. PEARSON, large oval berries, transparent golden color. Luscious and juicy.

MUSCAT OF ALEXANDRIA, generally esteemed the best white grape. Berries large, amber yellow. Delicious flavor.

Strong Planting Canes; each $3.50

Lily of the Valley

Selected Berlin Pips

Amorphophallus Rivieri

Commonly known as "Devil's Tongue." This is one of the most remarkable plants in the vegetable kingdom. It is a native of Cochin China, where it was discovered by M. Riviere, in whose honor it is named. It is a member of the aroid family — a family in which are found so many curious and interesting forms of plant life.

The bulb-like tuber is large, — so large, in fact, that the supply of food it contains is sufficient to produce a wonderful flower without any artificial application of plant food. The illustration shows a tuber growing in a saucer, in the East India house at the Missouri Botanical Garden. Flowering the plant in this manner is certainly novel and elicits much comment among visitors. The so-called flower is not unlike a calla, though much larger. The spathe is deep red or maroon, with a long projecting spadix. I have never seen it used in quantity as a decorative plant, but it should prove valuable when planted for subtropical effect. The finely cut decompound leaves that stand umbrella-like present a striking appearance when used with other plants. The petiole is dark colored, lightly mottled with red. The leaves are deep green, and from three to four feet in diameter.

It is advisable to start the tubers in the greenhouse toward the latter part of March. A rich soil is necessary, and when growing it requires an abundance of water. A slight protection from direct sunlight is beneficial. In this locality the tubers are lifted after frost and stored in a cool-house — underneath a bench is an excellent place — with a temperature of about 50 degrees. Farther north it is necessary to lift and pot the plants before frost and ripen off in the house. Propagation is by offsets and by seed.

F. K. Balthis

Grapes under Glass at Whitinsville, Mass.

Two recent articles in HORTICULTURE on grape-vines grown on borders, all inside, are very interesting to gardeners who grow grapes that way. Calling lately at Mr. George M. Whitin's establishment, I found Mr. McWilliam busy getting his grapery borders ready for starting the growth for this season. There are two houses here for grapes, and the borders, made twenty years ago, are all inside, two and a half feet in depth, on concrete bottoms, with ample drainage to take all surplus water away. The vines were started from eyes, and in May next will be twenty years planted. These are the same vines that, a few years later, produced the grapes that took many prizes, and the only gold medal ever given for grapes in Boston, and are now each year giving fine crops. Mr. McWilliam has never used any cow manure in the borders, as his method of fertilizing, he thinks, is all right without it.

After pruning and cleaning the canes, all the old top-soil is very carefully loosened, so as not to break off any of the fine roots which are near the surface. This is all taken away, and a new compost is put on over the fine roots, to about two and a half inches. After the fruit is thinned, a mulch of fine stable manure is put on, which is about all the borders get, but in all the waterings some fertilizer is mixed in the tank. The compost used is rich loam from a heap that has been used for roses, the sod all rotted, mixed with bone of several grades of fineness, and wood ashes.

Some few years ago Mr. McWilliam could see that the growth on the vines showed a lack of vigor. After studying and trying to think what could be lacking in the feeding, he concluded that the lime formerly used in the making of the borders had lost its virtue, and so at the next year's top-dressing a barrel of fresh lime was used in each house, water enough only being used to powder the lime, which was mixed with half of the compost, and the same amount of lime is now used each year. This is different from old-time methods in grape-growing, but as the vines are now in full vigor and bear each year full crops of excellent fruit, both in size of bunch and berries, it shows that lime (fresh) is a great factor for producing gratifying results. This is not surprising, as most hardy-fruit growers know that trees grown on a limestone soil are always more healthy and keep in vigor longer than those where no lime is in the soil; likewise the fruit is generally finer also.

About December 1st the bunches left on the vines are preserved in the fruit-room. Enough of the shoot is left with the bunch on, so that the lower end

is let down into a bottle of water, and where the top has been cut off the cut is sealed with grafting-wax, which prevents any evaporation, and the berries keep fresh and plump till all are used. The sealing of the end of the shoot is Mr. McWilliam's own idea, and is a good one. At this date, February 15th, I saw many fine bunches preserved this way, and a sample of some proved they had lost none of their flavor. The varieties grown here are as follows:

Early house: Black Hamburg, Maddersfield Court, Mrs. Pierce, Gros Maroc, Diamond Jubilee; late house: Muscat of Alexandria, three varieties; Alicante, Lady Downs, Gros Colman, Gros Guillaume, Mrs. Pearson, Appley Towers, Lady Hutt.

Mr. McWilliam does not think much of Gros Maroc for an early sort, and will inarch some other variety on the vine. Lady Hutt, he thinks, is one of the finest white late grapes. Appley Towers, black, and Lady Hutt were raised from the same seed pod.

This proves that the finest grapes can be produced from vines grown on inside borders if, besides the proper experience, all the other essentials are at command. It should be stated that half the compost, with no lime, is put on over the first half at the annual top-dressing.

Wm Swan

Whitinsville, Mass.

Ferns for Every-day Use

Continued from last week's issue.

A Belangerii or Veitchianum from Borneo and Java is a plant of very elegant habit, and is quite popular in Europe. Its plume-like fronds, finely and regularly divided, are from 1 foot to 1½ feet long and narrow, of a grayish-green color.

A diversifolium or dimorphum from Norfolk Island is a good plant, with fronds two to three feet long and very broad. They are of two different kinds, all bipinnate. The fertile ones have the divisions narrow, and in the barren ones they are larger and bluntly toothed. A Mayii is an elegant plant, in outlines much resembling A. bulbifera, but of a much stronger growth. The stalk is as long as the leafy part, the pinnæ all the same length and deeply cut in narrow divisions. These divisions are dentated, especially near the base, where they are larger. The top of the fronds and pinnæ are blunt.

Another section, which our common maidenhair spleenwort belongs to, is composed of dwarf plants that grow on rocks, old walls, or tree trunks.

A. resiliens and A. monanthemum, both from Jamaica, are much related to our A. trichomanes, of a more robust nature. The first has the pinnæ nearly round; the second has them oblong, and grows a young plant at the base of the frond. Both have the stalk black and wiry; both make bushy plants.

A. formosum from Jamaica has a black, wiry stalk, like the preceding, and grows in bunches. The fronds, about one foot long, and clothed with pinnæ, set close together, deep and irregularly dentated at the upper edge, and of a light-green color.

A. bisectum from West Indies resembles the preceding in habit and growth. The upper divisions of the two- or three-inch dentated pinnæ are long and narrow.

A. cicutarium from West Indies is of erect growth, the fronds about one and a half feet long, with a black stalk, edged with a narrow paper-like wing appendage. The leafy part is long, spear-shaped, and two and three times divided in narrow, crowded sections, overlapping each other. We received from Jamaica a form pinnato-partita, which is dwarfed, has the pinnæ shorter and a shorter stalk. It is a compact, very nice plant.

The Aspleniums with forked spore masses are of thick, succulent texture, and are among the big-growing species. They have the fronds only once divided, the divisions more or less deep-blunt-dentated or simply undulated. Some of them grow bulbils along the stalk. A. celtidifolia from Jamaica, A. compressa from St. Helena, A. decussatum from Polynesia, and A. marginatum from West Indies and Central America are some of those that belong to that section. They all are heavy growers, the last one with fronds attaining as much as six feet long.

In another section, with fronds only once divided and of heavy texture, there are some very hardy species that grow sometimes bulbils at the end of the fronds.

A. abscissum from West Indies and Central America has fronds about one foot long, on a six-inch stalk, and the division ovate, two-inches long, regularly dentated. A. arboreum from Jamaica grows a bushy head of fronds about 1½ feet long, clothed with spear-shaped pinnæ, sharply dentated, with a little ear-like division at the base.

A. obtusatum from New Zealand has leaflets fan-shaped and deeply toothed. The frond is about one foot long, and is terminated by large pinnæ the same size as the lateral ones. There are a few forms—A. o. lucidum is the best, the fronds being of a graceful habit, about two feet long, with pinnæ six inches long, tapering to a point, deeply toothed and of a shiny-green color.

A. serra from West Indies and Central America, has fronds over two feet long and nearly one foot broad, of an arching nature. The pinnæ are long, not large, spear-head shaped, sharply toothed, and the spore masses are parallel with the midribs.

A. Shepperdii from Central America, is a plant well furnished, with fronds over one foot long, light, glossy green, the pinnæ about four inches broad and roundly dentated.

Diplazium is a section nearly all the species of which are evergreen, some with luxuriant growth, and can be used with good advantage.

A. Franconis, A. gracilescens, A. grandifolia, and A. radicans from Central America, A. latifolia, A. maximum, and A. polypodioides from India and Himalaya, have all fronds from three to five feet long, nicely divided and well furnished.

Athyriums are more deciduous, but nevertheless, in their growing period, there are some imposing plants among them.

A. Achillæfolium, from Mexico, A. aspidifolia from South Africa, A. decurtatum from Brazil, A. umbrosum from Himalaya, and A. Woodwardioides, from the Philippines, grow fronds from two to three feet long, broad, and are noble plants when well cultivated. There are over 350 species of Asplenium known. Among them are many nice and useful plants not mentioned in this short list. Some of them can only be seen in botanical, or some private collections. The time is not here yet, but soon will come, when these beautiful plants will be asked for, not only by a few fern-lovers, but by the general public. I did not mention, either, the hardy Asplenums and Athyriums, with their numerous forms. We shall find them later in looking over the hardy fernery.

A. S. Hitchcock

British Horticulture

An English Carnationist

Mr. A. F. Dutton, who has taken a leading part in popularizing the American carnation for market work, is an enterprising young florist on the right side of thirty. His enterprise has been rewarded, for he is now able to take a larger nursery in Buckinghamshire. Here he has two houses, 54 by 200 feet, filled with American tree carnations. These are grown on eight benches in each house, and the chief varieties included are Mrs. T. W. Lawson, Enchantress, Fair Maid, Harry Fenn, Floriana, Governor Roosevelt, etc. He is now trying, among others, Mrs. Theodore Roosevelt, Flamingo, Harlowarden, and Lady Bountiful. Other kinds have been tried and found unsuitable. Mr. Dutton secures blooms all the year round. Those with long stems are sent to the Covent Garden market in batches of 2½ dozen. The average supply is 50 dozen a day, while in June and July the total works out at 600 dozen blooms a week. He finds the demand for good samples increasing.

Mr. Dutton's Methods

Mr. Dutton finds that Enchantress holds a high place in public favor as regards color and size, but for tint alone Fair Maid takes the first place. His method of culture is to propagate cuttings from January to April, in a cool greenhouse. The cuttings are inserted in 48's or 32's, in fresh loam, with one third sand. The plants are shaded until they are rooted, and potted into 60's before the roots get entangled. They are shaded again the first week, and afterwards given plenty of light and ventilation. They are stopped once in the 60 pots, and re-potted before becoming pot-bound. As to disbudding, all except the crown-bud are removed, and any side-shoots, until the length of stem required is procured. This experience has shown him that it is the individual flower, not the stem, that takes vitality from the plants. The houses are kept clean and healthy, and attacks of green-fly averted by judicious fumigation. The many prizes secured at the London and provincial shows are proofs that Mr. Dutton's methods produce good results.

Carpet-Bedding as an Educator

There is a tendency among the superintendents of the London parks and open spaces to discard the stereotyped forms of carpet-bedding, and to adopt some novel designs. Recently I interviewed Mr. W. Waller, who is in charge of a South London recreation ground, and an enthusiast in this branch of horticulture. His great aim is to make the beds topical delineators of historical events. When the excitement on this side of the Channel was highest over the chances of Sir Thomas Lipton "lifting" the American cup, the racing-flag of the owner of *Shamrock* was outlined on the lawn. In the South African war period, Baden Powell's scouts' flags were presented in carpet-bedding, and in the Coronation year the King's crown and flags. Mr. Waller's last success was the design of the Japanese flag. In this work the sun was composed of Alternanthera versicolor, and the rays of A. amœna. The space between was filled with antennarias, surrounded by a deep band of yellow spergulas, the latter forming a framework for the picture. In the Union-Jack design the tints were provided by iresines, antennarias, and lobelias. "I always think that a design illustrating an event of the day is better than a geometrical one. That is, in fact, what I aim at. There is too great a similarity in mere carpet-bedding, representing only carpet, lace, or hearth-rug, to please the public."

Exit the Potato Boom

American readers were no doubt made acquainted with the remarkable "record" prices in new seed potatoes prevalent some months ago. One variety was sold at three times its weight in gold. These high prices stimulated a spirit of speculation, with the result that numerous new varieties have been launched on the market, and the business was completely overdone. The inevitable "slump" has taken place, and it is now possible to buy the very best and latest kinds at a low figure. Trade has reached a more normal channel. There were about 150 new varieties shown at the National Potato Society's exhibition at the Crystal Palace last autumn. A keen competition is existing between the rival claimants for supremacy. The American introductions are also being brought to the front, including Vermont Gold Coin, Carman, and Uncle Sam. Mr. H. J. Jones, a potato specialist, writing of the last named, states, "I can recommend this as one of the best potatoes I know. It is an enormous cropper, healthy grower, resists disease, and when cooked is a fine white, floury ball." Mr. Jones is offering prizes for this variety, in an exhibition he is arranging at his nursery at Lewisham.

Trade at Covent Garden

The flower trade at Covent Garden opened badly in the New Year, owing to the severe frosts in South France. Supplies were short and prices prohibitive. Trade has now settled down to usual prices, steadier supplies being available. The season has now opened in the Scilly Islands, where tons of bloom from the bulb farms are being sent to London. The Guernsey supplies have also commenced, and as the weather has proved favorable some heavy consignments are anticipated. The chrysanthemum season has just concluded, and this has been characterized by heavy supplies and moderate prices. An increasing attention is being given to this popular autumn flower by the market growers.

W. H. Adsett.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE

Telephone, Oxford, 292 BOSTON, MASS.

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

We are sorry to see the U. S. Senate voting to exclude flowers from the Senate Chamber. It looks rather suspicious in that no reason for this harsh rule is given. Can it be jealousy on the part of the members, one of the other, or jealousy of the flowers themselves?

Fortunate for that revenue collector who attempted to assess import duty on shamrock seeds from Ireland, that he lived in Philadelphia and not in Boston. How Faneuil Hall would have rocked! Glad to find that the Board of Appraisers knew their business, and promptly reversed the ruling. Hire another band for next Friday, and never mind the expense!

Judging from the columns of our English contemporaries, the recent "potato boom" in Great Britain has had one good result in calling attention to the need of improvement in the method of preparing and placing cooked potatoes before the public. In this country we can heartily sympathize with our cousins across the water. The hunks of yellow soap, handed out as potatoes in the average restaurant, are a serious handicap to the prestige of the humble tuber which, properly served, has no rival as a palatable and useful food.

It must be apparent to all that rose development on certain lines has about reached its limit. The questions of American Beauty, Bride and Liberty culture have become threadbare, and outside of an occasional isolated instance of increased vigor and finer finish, the entire gamut has been played. The time is now ripe for the opening up of new and unexplored avenues for the rosarian's best thought and enterprise. This must be done if the rose is to retain its time-honored position in the floral kingdom.

Unless all signs fail, the approaching meeting and exhibition at Boston in the interests of the rose will stimulate increased attention to the Queen of Flowers, and from a standpoint that has thus far been much neglected in this country. There are lines hitherto almost untouched on which the florist may work with a certainty of future advantage. The public can be depended upon to respond to anything calculated to bring the rose nearer to them — not as the pampered blossom from the hot-house, but as the growing plant, blooming in the garden or the window, or garlanding the porch. On these lines rather than that of the long-sought "Yellow Mermet," which would be a short-lived sensation at best, lies the greatest interest and profit for the florist of the near future.

The impression of the florists' business commonly current with the public is that is is an exceedingly remunerative employment. This idea is due largely, no doubt, to the style which a few of the "Tiffanys" of the business put on, and the exaggerated tales that are told into the receptive ears of trusting newspaper reporters. The most remarkable feature of the public's attitude, however, is its reluctance to admit that the flower dealer has any right to his profits. Should he be smart enough to get rich, he becomes a target for comment not unlike that made on the Standard Oil, the Beef Trust, and similar examples of heartless voracity. The buying public apparently regard the florists' wares as something that is "growin' while you're sleepin'," and consequently inexpensive of production, and so find it hard to concede to the flower-grower comforts and profits comparable to those gained in other occupations.

The season is now with us when choice flowers of every hue are brought to the city markets in such unweildy over-abundance that the sight of them seems of no interest to the public, and a stand of American Beauty roses, carnations like peonies, gardenias, daffodils, and violets of high degree, makes little more impression than would a pile of bricks, a peanut stand, or any other familiar street-corner object. A few years ago, when such material as is now becoming so common, was an impossibility, or available only for the very wealthy, much was said in advocacy of cheaper flowers and the desirability of bringing them within the reach of all. Now that this condition has been attained, we may well inquire whether it is well that it is so. In so far as the presence of flowers may serve to soften the sordid harshness and the incessant grind of business life, their abundance may be regarded as a public good, even if the grower has to go hungry; but if by reason of their commonness the charm no longer works, and "familiarity breeds contempt," even in the rabble, then are we confronted with a phase of flower production not pleasant to contemplate. How to popularize cut flowers without degrading them, is a problem of paramount importance to the flower-growing fraternity.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

Your issue for March 4th is to hand, and I congratulate you on the excellence of its contents, and attractive "make-up." I trust that your enterprise will meet with its proper reward. — W. H. A.

MR. WILLIAM J. STEWART,
Editor HORTICULTURE.

Dear Sir: — Let me take this opportunity to say that I find HORTICULTURE a live and interesting magazine, and I wish you much success.

Very truly yours,
F. A. WAUGH.

Mass. Agri. Coll., Amherst, Mass.

After Adjournment

The preference given to Adiantum Croweanum as a cut frond for florists' use, and the extra price realized for that variety wherever offered, should make W. F. Kasting's offer in last week's issue of HORTICULTURE an interesting item for all who grow adiantums for cut fronds. We learn from Mr. Kasting that the stock offered is going rapidly.

After seeing the illustration of Miltonia vexillaria in the February 9th issue of the *Journal of Horticulture*, we feel like hiding away in humiliation, for never have we seen anything in this country approaching the specimen illustrated. A group of Primula obconica, however, further on in the same issue, restores our nerve. Our Boston gardeners can give them lessons in obconica growing, if the illustration depicts their best.

The New York *Herald*, Boston *Advertiser*, and other highly dignified journals devote valuable space and pay for "special dispatches" from California chronicling the notable exploit of a Californian who has "after trying for six years," succeeded in producing a green carnation. Very naturally, the great man "refuses to explain how he did it," and since the poor carnation is not able to tell, it seems we must try to worry along as best we can without learning the great mystery.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

The House of Representatives has turned down the mountain laurel as a proposed state floral emblem The vote thereon was 65 to 60.

The appropriations bill providing for the needs of Amherst agricultural college has been unanimously passed by the Massachusetts legislature, the objections thereto by market gardeners and florists having been withdrawn.

Leonard of Ward 23 undertook to have a little fun with Keefe of Fall River on the question of making the mountain laurel the floral emblem of the commonwealth, asking him if he would give the house a little information concerning the flower, and especially its botanical name. Keefe retorted that he would not undertake to give Boston members any such information, when they could go out in "their beautiful public gardens, maintained at such expense by the city of Boston," and obtain it. — *Boston Advertiser.*

CONCERNING YOUNG GARDENERS

"Accordin' to a theory of my owd grandfeyther, who had a nasty habit o' continually puttin' it inter practis, whenever you meet a lad you should always hit 'im, 'cos, if he ain't in mischief at that partiklar moment, he's sure to be afore very long. Of course, this is puttin' it very strong, but I've 'ad lads under me as no mortal 'uman bein' could 'elp hittin', so aggrawating were they. Companionship is sweet to lads, and to put one of 'em to work by hisself is about the greatest punishment you could inflict on 'im, but it's one o' the ways o' tellin' wot he's made of. If he tackles th' job, spite of th' loneliness, and gets it done, you may 'ave 'opes of him; but if he is continually dodgin' off to 'ave a drink o' water, see wot time it is, or fetch another lad to 'elp 'im to do somethin' he could very well do hisself, you may depend that he wants a bit o' shapin'.

"In conclusion, I may say that if anybody interviewed me as to the advisability o' puttin' a lad to gardenin', I should be inclined to give th' same counsel as 'Punch' did to them about to marry — 'Don't' — 'cos I ain't seen gardeners come and go wi'out knowin' somethin' of th' ups and downs of a gardener's life, to say nowt o' th' worries and poor pay; but if yer want to make a gardener o' your lad, be quite sure fust as he's got a taste for it. If he has, theer's a chance on him gettin' on; but, if not, it's like tryin' to fit a square peg inter a round hole, and it's th' misfits wot is th' failures in th' gardenin' world. Finally, let 'im begin by learnin' 'ow to work first. He can fill hisself as chockful o' sience as he likes arterwards, but remember as you can't get much out of a garden unless you know 'ow to swing a spade. It's fashionable now to call lads as is learnin' gardenin' students. Call 'em wot you like, but for goodness sake don't pretend to teach 'em gardenin by lettin' 'em look on while somebody' else does th' work. — OLD JIM, in *Journal of Horticulture and Cottage Gardener*, London.

A NEWPORT SENSATION

An attachment has been placed on the property of Mrs. Mary F. Jacobs, a wealthy summer resident of Newport, as the beginning of a suit brought by James T. Donovan, an assistant gardener, to recover damages in the amount of ten thousand dollars for injuries received by him in falling from a tree on the premises. The suit is quite a novelty, distinct from the usual novelties of the seedsmen's catalogues ordinarily claiming the attention of gardeners at this time of the year. This fact, together with a certain amount of mystery attached to it, makes it a topic bordering on the sensational at present. It appears to some persons that John ought to have ferreted out the treachery of the tree or any part of it while on his way up its dizzy heights, and not have waited until his perilous ascension had been completed and an equally (as events have sadly proved) perilous descent entered upon. Others again claim that some one else and not John ought to have been reasonably sure that this particular tree was a fit object for John to climb. However, on this occasion it was John Donovan that was hurt, and not the tree; but likely the tree had been hurt some time, and therefore, the tree having been hurt at one time, was at least a contributory cause of a man's being hurt at this time. Mrs. Jacobs will probably be the next to get hurt, $10,000 or less.

PERSONAL

Everett Fillow of Westport, Conn., has gone on a two-months' visit to Florida.

Visitors in Philadelphia: B. Schoenhut Buffalo; W. A. Prosser and H. A. Bunyard, New York, on the way home after a successful business trip.

Mr. J. N. May sailed on a voyage to southern climes on the steamer *Apache* on March 7. His health is improving, and it is hoped that the trip will complete his recovery. In his illness the greenhouses at Summit, N. J., and the business, have been under the direction of his son, Harry O. May, the results of whose management throughout the past winter have been exceedingly creditable.

Our Pittsburg correspondent thinks that city can give Chicago cards and spades in politics, for, while it is true they carnationed Peter Reinberg into an aldermanic job, the Pittsburg florists have just elected John Bader to Councils, without the aid of carnations or booze — but it is not known how much John has promised the residents of Dutchtown in the fall as material for kraut.

Louis Gudinchet, twenty-six years old, a French landscape gardener, and who came here from abroad recently to pursue a course of study in American horticultural schools, attempted suicide February 25th in his room at the Ivy Leaf Hotel, Second avenue and Thirty-fourth street, New York, by shooting himself. One shot was fired, the bullet entering the abdomen. Gudinchet was hurried to Bellevue Hospital and immediately operated upon. The bullet was removed, and the man's condition was pronounced critical.

NEWPORT PERSONALS

George A. Weaver has returned much improved in health, after a month's sojourn in the South.

V. A. Vanicek has returned from his European trip, taken for the two-fold purpose of pleasure and purchase.

John Marshall is cutting some elegant Enchantress. He contemplates greatly increasing his planting of carnations next year, and as he is not the only one, it is safe to say that a great many will have to be bought from out-of-town growers, as there is not in Newport a single grower of carnation plants for the market.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY

Two displays of orchids were made at Horticultural Hall on Saturday, March 4, one being a magnificent collection of dendrobiums, exhibited by Peter Murray of the W. P. Winsor estate in Fairhaven, and the other of phalænopsis and other varieties from the F. L. Ames estate in North Easton (W. N. Craig, gardener). The dendrobium collection included forty plants, of twenty-five different varieties, all showing splendid bloom, the result of superior cultivation. Of the D. nobile, there were no less than thirteen varieties with well differentiated colorings and markings. The varieties of D. nobile shown were Oakwood, 'Burfurdensis, virginalis, Dominianum, Ballianum, Sanderianum, Manheimeanum, Victoria Regina, Sanderæ, albiflora, Dominii, Cooksonii, and nobilis. In addition to these there were several beautiful hybrid varieties of dendrobium, among them being Schneiderianum, Cybele, Cassiope, Ainsworthii, crassinoidæ, Rolfæ, Venus, and chrysodiscus.

The plants from the Ames estate were remarkable for their profusion of bloom, and being among the most attractive varieties of orchids, made a beautiful exhibit. There were five plants of the delicate pink P. Schilleriana, probably the finest specimens ever seen in the hall. An Odontoglossum Wilckeanum albens showed two spikes, and there was a Miltonia Bleuana virginalis with exceptionally large blossoms. A specimen plant of the true Cattely Trianæ alba was also shown.

Special Notice to Exhibitors

On account of the great demand for space at the Spring exhibition of the Massachusetts Horticultural Society and the annual exhibition of the American Rose Society, scheduled for March 23–26, 1905, intending exhibitors are advised to file their entries at least one week prior to the opening of the exhibition.

Preference will be given to such entries, if the conditions require it.

WM. P. RICH, *Secretary.*
Horticultural Hall, Boston.

NEW JERSEY FLORICULTURAL SOCIETY

The regular monthly meeting of this society was held on March 3 in Orange, N. J. The various exhibits in contest for the society's annual prizes were of the usual high order of cultural merit, and included roses from Peter Duff and William Reid, carnations from D. Kindsgrab, W. Bennett, William Reid, Peter Duff, and M. Hornaker, orchids from Edwin Thomas and A. Bodwell.

William Turner of Oceanic was the essayist of the evening, his subject being Fruits Under Glass. Mr. Turner made claim to the superiority of fruit grown under glass over the open or that imported, and asserted that when this was known it would be more extensively employed. This was the first essay under the new committee of which Edwin Thomas is chairman, and was received with great favor as an earnest of what is still to come.

J. B. DAVIS.

LONDON FRENCH HORTICULTURAL SOCIETY

Translated from the Revue Horticole by J. F. Huss.

The London French Horticultural Society, on the 14th of January, celebrated the sixteenth anniversary of its foundation. The banquet was presided over by M. Philippe de Vilmorin, on invitation of its honored president, George Schneider. Many notable horticulturists participated, among those present being Messrs, Ed. Sherwood, M. Watterer, R. C. Tucker, of Hurst & Son, M. Ingamells, and Collingridge, Editor-in-Chief of the Gardeners' Magazine, Drast Hiehle, S. Harman Payne, B. Wynne, and other members of the National Chrysanthemum Society, Ed. Seve, consul-general of the United Royal Belge, and P. Huguenet, director-editor of the French journal, the "Chronique," published in London. M. Geoffray, counsellor at the French legation, who presided at the banquet four years ago, being unable to be present, sent his regrets. Doctor Masters and Messrs. W. Robinson, Harry Veitch, and George Nicholson were also unable to be present. The toasts were responded to by M. Ph. de Vilmorin, Messrs. Schneider, Harman Payne, Serra, and Gordon, and the sentiments expressed were applauded with great enthusiasm, and many songs were rendered which added to the great gaiety and happiness of this delightful family festival which will long be remembered by the participants.

NORTH SHORE HORTICULTURAL SOCIETY

The annual banquet of this society was held in Lee's hall, at Manchester, Mass., on Friday evening, February 24th. President P. R. Sanborn presided and over one hundred members, with their ladies and friends, partook. After due justice had been done to the good things set before them, Mr. A. Akerman, State Forester, made an address, thoroughly explaining the aim of the department of which he is the head, with suggestions as to fighting insect pests, guarding against forest fires, etc., and also spoke very entertainingly along the lines of forestry as related to agriculture and horticulture. A fine program of vocal and instrumental music, followed by recitations, was thoroughly enjoyed, after which the floor was cleared for dancing with which the very enjoyable affair was brought to a close.

GARDENERS' AND FLORISTS' CLUB OF BOSTON

The next Field Day will be held on Saturday, March 11, 1905, at the greenhouses of Warren W. Rawson, Arlington.

Members and friends will take Arlington electric cars, leaving Park Street station at 1 o'clock, and leaving the cars at Medford Street, the nearest point to the greenhouses.

This should prove a most interesting and instructive Field Day, and a large attendance is hoped for.

W. N. CRAIG, *Secretary.*

TARRYTOWN HORTICULTURAL SOCIETY

The February meeting of the Tarrytown Horticultural Society being the quarterly social meeting, little business was transacted. The dates of the November (Chrysanthemum) show were decided upon, being October 31st and November 1st and 2d. The prize of the evening for the best vase of assorted roses wasa warded to John Featherstone, Greystone, Yonkers. L. A. Martin of Irvington gave him a hard run, but his roses were slightly lacking in stem. Mr. Featherstone also exhibited some fine plants of cyclamens and Cineraria Feltham Beauty. This cineraria is the result of a cross between C. creanthus and C. stellata, being a considerable improvement over the latter variety. In color the varieties of this cross run mostly to pink.

The secretary, E. W. Neubrand, was presented with a gold locket, suitably engraved, by his fellow members as a token of respect and appreciation of his valuable services in the interests of the society. Light refreshments were served, and several of the members entertained the company with songs, recitations, etc. Altogether a very pleasant evening was spent.

WM. SCOTT, *Cor. Secretary.*

NASSAU COUNTY HORTICULTURAL SOCIETY

The Nassau County Horticultural Society held its regular meeting March 1st. H. F. Meyer, gardener for George R. Sheldon, read a very interesting paper on the growing of mushrooms. The first exhibition of the Society being carnations, some very fine flowers were on exhibition. Special mention was given to W. Willisen, gardener for H. F. Noyes, for sport from Enchantress, several shades darker than the latter, and measuring 3¾ inches across; also to F. Boulon for sport from Lawson. Many others were represented in the exhibition, including F. Mense, with his beautiful white seedling "Dosoris."

S. J. TREPESS, *Secretary.*

AMERICAN ROSE SOCIETY

Additional special prizes are offered for competition at the annual exhibition to be held in Boston on March 23 to 26, as follows:

Pierson-Sefton Company, Jersey City, N. J., a $50 silver cup for the best vase of fifty blooms of teas or hybrid teas, not less than three varieties.

Welch Bros., Boston, a $25 silver cup for the best vase of roses in the show.

Peter Crowe, Utica, N. Y., a gold, silver, and bronze medal for the best, second best, and third best pair of vases containing twenty-five Brides and twenty-five Bridesmaids.

WM. J. STEWART, *Secretary.*

CHICAGO FLORIST CLUB

The Chicago Florist Club will hold an exhibition of Easter stock at their meeting room, Handel Hall, Thursday, March 23d, 1905. This exhibition will not be limited to club members, but a cordial invitation is extended to outside

growers. It is hoped and expected to see Turnford Hall begonia, The Baby Rambler rose, Azalea Indica and Mollis, Deutzia grœcilis, arrangements of hyacinths and tulips, Easter lilies, hydrangeas, and Primula obconica, etc Mr. Grower, right now is an opportune time to start your sample stocks for this exhibition. A special invitation is extended to bring your Easter novelties.

LENOX HORTICULTURAL SOCIETY

At the meeting of this society on March 4, Pres. Schmid read a very instructive paper on Carnations, from which arose a long discussion. This was carnation night, and a very good display of flowers was there. F. R. Pierson Co., Tarrytown, N. Y., exhibited some of their new varieties. They were awarded first class certificates for Victory, White Lawson, and Variegated Lawson, and a vote of thanks for Daheim, which had already received a first class certificate from this society. The principal exhibitors in the schedule classes were A. J. Loveless, J. Dallas, and Elm Court Farm. E. J. Norman was awarded a diploma for a very well-flowered piece of "Cypripedium venustum spectabile."

George Foulsham, *Secretary.*

CHRYSANTHEMUM SOCIETY OF AMERICA

Announcement of Special Prizes.

The following special prizes have been offered, to be competed for at the next annual meeting of the C. S. A., to be held in Philadelphia.

F. R. Pierson offers silver cup for 36 blooms, — 6 blooms each of 6 varieties introduced here in 1904 and 1905.

W. Wells & Co., Earlswood, England, offer a gold medal, a silver-gilt, and a silver medal for 6 flowers of chrysanthemum Mrs. Wm. Duckham.

Fred H. Lemon, *Secretary,*
Richmond, Ind.

FLORISTS' CLUB OF PHILADELPHIA

Lynch in the Lion's Den.

He came, he saw, he conquered! The man from West Grove we've been growling at these many years had the temerity to come down into the Lion's Den in Philadelphia March 7th, and meet us, tooth to tooth, and claw to claw, and talk roses and nomenclature, Balduin and Philadelphia, grafted and own roots, truth and fiction; yea, and to his glory be it said, he came out without a scratch!

Never, since the day that Edmund Burke assailed the ministry of Lord North in April, 1774, on the Boston Tea Question, has such marvellous eloquence, suave diplomacy, keen analysis, and masterly summing up greeted the ears of an astonished and admiring audience: wincing one minute and glowing with self-satisfaction the next. Oh, how he did go for us! Lathered us with taffy now; carved us into mincemeat the next instant. It was a peach! You can read it all for yourselves in this week's issue, and if you read it carefully and know the true significance of the points, you'll say with me "A Peach"!

This preamble refers of course to the appearance of P. J. Lynch at the monthly meeting of the Florists' Club of Philadelphia, and, all jokes and mock heroics aside, it was a very fine effort, and will be widely copied both here and abroad, wherever people are interested in the rose. Jacob Becker told me it was worth five dollars to come to the club to hear that talk.

Myers & Samtman exhibited their new seedling rose, a cross between American Beauty and Safrano. The color is rose pink, stems long and stiff, bright foliage, showing tea blood, form much better than Testout, although resembling it somewhat, but quite double and showing strongly its Beauty parentage.

The special feature for the April meeting will be "The Truth about Coal," a discussion which will be opened by Charles D. Ball, and in which a number of other growers are expected to give their views. A musicale under the auspices of the club will be held in Griffith Hall, March 30th.

NOTES

M. H. Walsh of Woods Hole, Mass., delivered a lecture on the rose and its culture in the garden, before the Holyoke (Mass.) Horticultural Society on the evening of March 1.

The annual dinner of the New Bedford (Mass.) Horticultural Society was held on the evening of February 28. Among the visitors were Thomas J. Grey and J. K. M. L. Farquhar of Boston. Mr. Farquhar made an instructive address.

A. Herrington of Madison read a very interesting paper before the Massachusetts Horticultural Society on March 4th, his subject being "Some Aspects of Hardy Flower Culture." We expect to present it for our readers' perusal in our issue of next week.

On the evening of February 28th the bowling team of the New Haven florists was entertained at Hartford by the Hartford Florists' Club. Three games were rolled, for the purpose of facilitating digestion, of which the New Haven aggregation captured two.

The New London and Groton Horticultural Society has changed its name to the New London County Horticultural Society. Three shows will be held — a rose show in June at Norwich, Conn., an August show, and a chrysanthemum show in New London. A ladies' night will be held at New London on March 21.

The first exhibition of the Worcester County (Mass.) Horticultural Society was held on March 1. H. F. A. Lange, E. W. Breed, George McWilliam, F. A. Blake, M. J. Whittall, George Melvin, and L. C. Midgley were among the prominent exhibitors; carnations, orchids, roses, primulas, violets, and potted plants in variety being shown in profusion.

The struggle between the New York and Hoboken florists' bowling teams waxes hot. On last Saturday night the New Yorkers visited their opponents' bailiwick and three games were played, the first two being won by the visitors; but the haggis and frankfurter combination turned the tables in the third by a margin sufficient to tie the series, the scores standing 23,530 for each. Next Saturday, March 11, there will be another set-to — this time on the New York alleys.

ROSES: THE NEW AND PROMISING VARIETIES

A Paper read before the Florists' Club of Philadelphia by P. J. Lynch, March 7.

In responding to the invitation of the chairman of the committee having charge of the evening's program, to give a "short" talk upon the new and promising roses, I think the polished diplomacy of the gentleman overcame my better judgment, for I know of no particular act of my life that justifies the honor thus paid me. Your club has ever been in the front rank in furthering the popularity of the rose, while the fame of your growers is world wide. For a slow town like Philadelphia, sending safely to England's Queen, as one of your growers did, a bunch of that beautiful rose of Philadelphia origin, Queen of Edgely, savored of a pace rather difficult to overtake. Then, too, while the origin of the ever popular American Beauty (or as has been claimed Mlle. Ferdinand Jamain) is somewhat obscure, yet it first attained prominence as a commercial variety through the foresight of a Philadelphia grower. Liberty, now so thoroughly established as a forcing variety, came into prominence through the efforts of a Philadelphia grower. Even that much discussed variety that to-day for amateur cultivation is perhaps the leading rose of its color, achieved notoriety through one of your local growers. Though gallantry was at stake as to whether it should be named for the Bishop or the Lady, the Bishop won. I refer to Balduin — Helen Gould. I might mention a host of now famous varieties, such as William Francis Bennett, Souvenir de Wootton, Golden Gate, Princess Bonnie, Pink Soupert, Marion Dingee, and many others whose rise of fame and popularity came through the intelligent efforts of growers of Philadelphia and its environs. With these facts in mind I approach this subject with considerable apprehension.

I am conscious of the fact that in the brief limitations of this paper it will be impossible to cover the subject completely and accurately. I shall therefore give you my observations as they have occurred to me in the daily contact with over a thousand different varieties of roses, coming as they have, from all parts of the world. I shall speak only of roses now in commerce, and while some varieties may be mentioned that are not entirely new so far as recent origin is concerned, yet it is to be borne in mind that there are a great many roses "Born to blush unseen and waste their sweetness on the desert air"; many for years remained unnoticed with their latent beauty undeveloped, until through sheer force of worth they rose to fame and glory. We have notable instances of this fact in Golden Gate, and more lately that Irish beauty, Killarney. I shall also give equal prominence to varieties that are undoubtedly valuable, not only for forcing purposes, but those varieties appealing to amateur growers, whose ranks are constantly increasing. Of this class, for whom I feel better fitted to speak than from a strictly professional standpoint, I can say that it is a gratifying indication of the rapidly increasing love for the queen of flowers, that the average amateur enthusiast — and there are thousands of them in all sections of the land — is keenly alert to the improvements of the rose, and not infrequently has a knowledge of va-

rieties as accurate as that of the professional grower. This growing interest of the masses bodes well for the future of the rose, and should prove a stimulus to American hybridizers, who may feel assured if their creations have merit, that the rose loving public will be quick to give them deserving recognition.

It seems fitting that I recommend at the outset that sensational new rose, Mme. Norbert Levavasseur, or Baby Rambler. This vivacious French débutante is the rose that blooms every day in the year. Growing in its full vigor 20 inches high, with finely polished dark-green foliage, with which it is abundantly supplied, it forms a compact bush, which with ordinary care is a mass of shining crimson beauty. For every purpose from the florist's standpoint it possesses the highest value, and for the amateur it is equally valuable. It is indeed a perpetual blooming, dwarf Crimson Rambler.

In the Rambler class may be also mentioned a variety that does not seem to gain the recognition it deserves as a rose of splendid worth — Dorothy Perkins. It is a true Rambler, particularly valuable for Christmas work, and equally as valuable in the open ground; thoroughly hardy, bearing in large clusters beautiful clear, shell-pink flowers, of excellent substance. Philadelphia Rambler, a recent introduction, bears out all that is claimed for it, and in some respects is an improvement over the old reliable Crimson Rambler.

One of the most unique and valuable of the newer roses is Soleil d'Or, the first of a new race, a cross between Persian Yellow and Antoine Ducher. It forms a strong, sturdy bush, very robust in habit, with foliage that emits the true sweetbriar fragrance. The flowers are sunset yellow or reddish gold, and are highly fragrant; hardy everywhere; splendid for single specimens or for hedges. In this same class of hardy roses of the Rugosa and Sweetbriar type may be mentioned Sir Thomas Lipton, a Rugosa rose. The flowers are large, very double, pure white and fragrant. It is freer blooming than any other Rugosa, and will prove a splendid variety for hedging puproses. From Germany comes another great new hardy rose — Frau Karl Druschki. The flowers are almost at large as American Beauty, deliciously fragrant, full, deep, and double. This variety may be called a free-blooming hybrid perpetual, being a cross between Merveille de Lyon and Mad. Caroline Testout. The color is snow-white. Apart from Margaret Dickson, we do not have a really great white rose in this class, and this variety may be considered one of the best, if not *the* best hardy hybrid perpetual rose of its color.

Among the newer hybrid teas of prominence and merit we have Bessy Brown, a really wonderful rose, with large, double, deep flowers, borne on strong, erect stems, after the style of President Carnot, which it resembles in growth and somewhat in flower, but is distinct enough to deserve a place at the head of the list. We hear but little of the rose that bears the honored name of Admiral Schley, which as a pot plant possesses rare value. The color is rich, glowing, velvety crimson. The flowers have unusual substance, a valuable point, are delightfully fragrant, and borne in great abundance; a clean, healthy, dwarf grower, with splendid foliage. Since Killarney has become recognized as a rose of more than ordinary merit, such roses as Mad. Julez Grolez, its counterpart in color and almost equal in flower, remains unnoticed. A splendid grower, and with proper management should prove a strong competitor of Killarney. The list is incomplete without Lady Joy, a cross between American Beauty and Belle Siebrecht, a royal parentage; flowers large, cup-shaped, almost double, with enormous shell-like petals of good substance, highly fragrant; the color is new — lively crimson. Mrs. Robert Garrett is of the same type, but not as free blooming; immense bright, clear pink flowers. We cannot omit Winnie Davis, one of the fairest of the newer hybrid tea roses. Very free blooming, of good habit of growth, with immense, long heavy buds, splendidly formed, developing into unusually large flowers. Color, bright apricot pink, shading flesh tint at the base of petals.

Right here I wish to compliment our American rose growers upon the splendid results achieved in producing new roses of merit. Fully conscious of what our brothers across the sea have done for the rose, for which we are indebted to them, I would say naught against the magnificent work they have done, and are doing. Unlike our American growers, however, who hesitate to offer a rose unless it be of pronounced merit, from my own personal experience, each year hundreds of varieties are produced in Europe, many of which have little or no merit to commend them. I know of nothing that is so fraught with pleasure, as well as disappointment, as the trying out of new roses, and it has been the practice of our company up until recent years to try out the new roses of Europe as they have been introduced, and I can say that the large majority of these new varieties of foreign origin have been disappointing. Therefore our American growers are to be not only congratulated, but also commended upon the work they are doing, and the precaution shown in introducing any and every seedling they originate.

I need not call attention to Mr. Hill's splendid new rose, Richmond. It has spoken for itself, and as a candidate for popular favor in the class of red forcing roses, it seems to be a decided improvement over any we have at this time. Rosalind Orr English is another promising hybrid tea. Mr. John Cook, to whom we doff our hats as one of the veteran introducers of meritorious new roses, contributes Cardinal, a beautiful crimson hybrid tea, and Enchanter, an extremely free-blooming variety with large, clear, bright pink flowers. Mr. Cook selects this variety as the best of over five hundred seedlings. Let me recommend Souv. de Pierre Notting as one of the best roses for all around purposes introduced in many years. It will take front rank, if not surpass from every standpoint, white and pink Maman Cochet, the best roses for summer flowering in the open ground. This new variety is a splendid grower, throwing up beautiful flowers on long, stiff, erect stems. The bloom is large and double, opens easily and possesses unusual substance. Difficult to describe, apricot yellow, tinged with golden, mixed with orange yellow while the edge of the petals are shaded carmine. Every florist who has a foot of ground for summer roses should have this rose. Mad. Derepas-Matrat has established itself as a companion to the Cochet roses, which it resembles in every particular, except the color is deep yellow.

The following varieties are also among the most promising of the newer sorts: Canadian Queen is an improvement over Mrs. J. Pierpont Morgan; Mad. Cusin and Mrs. Oliver Ames, the latter which it resembles in color; General MacArthur, a vivid crimson hybrid tea; Red Chatenay, deeper in color than the parent; Uncle John, more pronounced in color than Golden Gate; Beauty of Rosemawr, rich carmine red, valuable for outdoor purposes; La Detroit, distinct and valuable, shell pink, good for forcing; Saxonia, worth trying as an improvement over Golden Gate; Mrs. B. R. Cant, unusually valuable for amateur cultivation, better than Papa Gontier; Aurora, an improvement over Hermosa; Franz Deegen, an immense, deep, double, yellow rose, alike in habit and growth with Kaiserin Augusta Victoria, and far superior to Perle von Godesburg, sent out as Yellow Kaiserin; Florence Pemberton, a strong-growing hybrid tea, large shell-pink flowers, good for open ground work; Maddalena Scalarandis will rank with the Cochet roses outdoors; color rich, dark pink, on yellow ground.

Ideal ranks with Bridesmaid and La France, pink in color. As an example of an exceedingly rare rose, I mention the variety York and Lancaster, which dates back to the War of Roses between the royal houses of York and Lancaster, said to have originated when these warring factions became united, its colors representing the white of the Yorkists and the red of the Lancastrians, the flower being a combination of red and white blotched and striped. Magnafrano is a free-blooming hybrid tea, with large, double, pink flowers. Wellesley is a remarkably free flowering forcing variety. The color is bright pink; a good keeper. For greenhouse men doing a local trade there is always a demand for a hardy ever-blooming climbing rose. To meet this demand there is no better variety than Climbing Clotilde Soupert.

GREENHOUSES BUILDING OR PROJECTED

WEST MILAN, N. Y. — Allen Traver, violet house.

CARROLTON, Mo. — Kennedy & Farham, three houses.

OBITUARY

Mrs. Fred R. Mathieson died on the evening of Wednesday, March 8. Mrs. Mathieson has been a great sufferer for years. Her illness took an alarming turn last Saturday, since which she has been unconscious most of the time. Mr. Mathieson has the sympathy of a wide circle of friends in his bereavement.

Outdoor Art and Craft

The Massachusetts Highway Commission, Boston, is advertising for 4,000 trees of various kinds, offers to be made up to noon, March 16.

The Boston & Maine railroad has organized a department to exterminate the gypsy and brown-tail moths on the trees and shrubs at its stations and all along the route from Boston to Portland.

Arboriculture for March gives a beautiful colored plate of several species of its favorite, Catalpa. A number of half-tone illustrations, showing the waste of the loggers in the great forests of the West furnish food for reflection. The wanton waste of timber in the past and at present is most deplorable, and *Arboriculture* is doing good work in sounding the alarm.

There are at present approximately three millions of acres of woodlands in the State of Massachusetts, or sixty per cent of its total area. The greater part of these woodlands is in private holdings, and will always remain so. It is believed that the wealth of the State can be greatly increased if these owners can be induced to practice improved forestry methods. The State Forester is therefore giving a considerable part of his time to talks and lectures before farmers' clubs, granges, and kindred organizations.

AMERICAN APPLES IN ENGLAND

The reports from local markets as to the condition of the pack of American apples put on the English market are exceedingly creditable to the packers. It is seldom that the standard varieties popular in the English market have turned out so much in favor and to the taste of the buyers, the fruit being of that firm mold and solid condition generally required in this market.

In 1903 the enormous amount of 11,000,000 bushels of American and Canadian apples was sold in the English market, and from present appearances that record will be nearly, if not quite, equaled from the crop of 1904.

There are several fine varieties of English apples, produced in a small way in local orchards, which it would be well to test in the more temperate zones of the United States, for they are a very superior fruit in flavor, are long keepers, of fine size, and of most inviting color. However, quoting an English authority, "The American fruit grower knows how to attract the purchaser by uniformity in size and quality in a way which English growers have hardly begun to learn. And so, in the big towns, the English product hardly finds one purchaser at 2 pence (4 cents) a pound, where the American fruit finds ten at double the price."

There has been very little change in the market methods touching apples in a local way in the past quarter of a century. I have observed these methods personally in 1878 and in the past two years, and so they continue.

ALBERT W. SWALM,
Consul.

CHICAGO TRADE TIPS

The finest tulips seen on the local market this season are White Hawk, a single beautiful pure white, long sharp pointed bud. Its habit of growth is perfect, the immense large bloom carried erect on a long, stiff stem, well above the foliage. In a novelty color, all the rage now, single tulip Thomas Moore, takes the lead. Shape of flower somewhat like La Reine, but longer. The color might be called burnt orange. This being the elite shade of the season, we attribute this variety's popularity to that fact. Salvator Rose is a fine double-pink bloom, as large as Murillo, full double, and of a beautiful warm pink. This variety promises to crowd Murillo for first place. Some well-grown Murillo, the standard double pink, are seen with fine finish. Imperator Rubrum is a good double red. Compared to the cut of former seasons, La Reine is of good quality, not so much rouge strain prevalent this year. It seems to respond quicker to the pink finish so desirable in this sort. Kaiser Kroon, as grown by Stollery Bros., certainly belongs in the novelty class, stems 14 to 18 inches long, supporting a fine, long pointed bloom. All the above-mentioned varieties are good forcers, and my next week's tip will tell you the best single red, single yellow, and a good double to force.

CUT-FLOWER NOVELTIES IN CHICAGO

E. H. Hunt is receiving a fine strain of English wallflowers. White and double-pink stock is another of McKeller's head-liners. The finest sweet peas in Chicago are to be found at Vaughan & Sperry's. A. L. Randall Co. are the exclusive white lilac firms, also the first purple lilac offered this season was seen here.

Cut Flower Market Reports

BOSTON. — Down goes the market with a dull thud on Ash Wednesday morning. Values not only cut to about half, but stock unsalable and without prospect. This applies to about everything in the list. The demoralization was not unexpected. At present there is nothing to be done, but to wait patiently for things to assume a new level.

BUFFALO. — Flowers of every description are rather plentiful — more than are needed — and prices are somewhat low in general. Roses, which have been selling at fair prices, will be cheaper from now on; carnations also. Violets and bulbous stock are very plentiful. There will be a general slump after the opening of Lent.

CHICAGO. — A sharp expansion in receipts, occasioned by the spring-like weather, has marked the cut-flower trade this week. The bright weather has improved the inferior quality in American Beauties somewhat, however, the much-sought-for new crop is not yet on. Bride and Bridesmaids are in heavy supply with a slight decrease in values on the best grades. Meteor and Mme. Chateney move slowly. Liberty are in shorter supply and this is especially felt on the better grades. Golden Gate and Perle show an improved quality. Uncle John is in grand shape. Sunrise is grown in smaller quantities, but a standard sort hereabouts. Carnations are on in full crop, and the discounts necessary to unload would bring blushes to the cheek of Halsted Street. A local house saved the market from a further decline, shipping an order of 30,000 fancy on Friday. Violets are in heavy supply, the quality of singles being superb. Lady Campbells are hard to move. There has been a disappointing demand on all bulbous stock, Harrisii and callas suffering most. The tulip situation is not much better, only the better grades reaching market quotations. There was some hope that Mardi Gras at New Orleans would be the factor in giving strength to this market, but local houses report orders were not up to last year.

LOUISVILLE. — Business conditions for the past week are reported as very satisfactory in all respects. All staple flowers are available in satisfactory quality and full abundance. Violets are selling exceedingly well, but quality is not quite up to standard.

NEWPORT. — The market has decidedly improved since the beginning of last week; the stock coming is very good in quality and equally good prices are obtained. Funeral work is not perhaps the most congenial part of florists' work, still it is occasionally quite profitable, especially if (as has been the case here this week) on Monday morning quite a surplus of certain kinds of stock is on hand from last week, five or six funeral orders come in to use up this surplus stock, which otherwise might be hard to dispose of.

NEW YORK. — Just now, as a last Ash Wednesday puts its extinguisher on social gaiety, after a winter of unusual rigor and the prospects of an overwhelming crop from tardy houses, grower and wholesaler alike are filled with apprehension regarding market conditions for cut flowers in the immediate future. Values all through the season have not kept on a proper level as compared with the cost of the unprecedented quantity of fuel consumed, and demoralization now will mean that it will be up-hill work to bring the average of the entire season's product to a point where the grower will realize any fair return for his investment and labor. Retail dealers are not particularly jubilant over the season's record, either, most of them conceding that the months of January and February fell away behind record and expectations. All varieties of flowers are being received in increasing abundance and it is extremely doubtful if prices as given in our quotations for first half of the current week will continue beyond Wednesday. All are hoping that misgivings are unfounded, and that a brisk demand may characterize the Lenten season and be followed by a record-breaking Easter business.

PHILADELPHIA. — The cut flower market last week was in pretty fair shape: good demand all along the line, except for some items, such as lilies, bulbous and miscellaneous stock. Beauties are still scarce; but prices remain unchanged. "First time on record that $7.50 has been realized for Beauties in March;" that is the assertion of one of the largest and oldest of the Philadelphia wholesalers. Lent seems to have largely lost its terrors, as there is no anticipation of any great slump. People are not as strict as ten years ago, apparently.

PITTSBURG. — Local growers are not boastful of any phenomenal success with roses and carnations. In fact, everything is very slow. We have had an exceptionally good demand for fancy Beauties and the same may be said of carnations, of which some very fine grades are also coming in from out of town. One shipment from Columbia City, Ind., deserves to be commented on. In a box of about 1,000 carnations not one was broken or bruised. The flowers were not tied in bundles of 25, but each bloom placed singly.

Good violets are coming in by the thousands and are easily disposed of. As to daffodils and tulips — it would seem that every farmer in Allegheny County has been exchanging apples or corn for daffodils, the way they are coming in. There is no call for orchids and gardenias. Pot plants are in demand and quite a shipment of cyclamens and Primula obconica arrived in town this week. Some obconicas in 6-inch pots were well grown and the various shades of color made quite a pleasing display; by Saturday noon none could be bought.

ST. LOUIS. — Last week closed with an unwieldy glut on all kinds of stock The present week opens somewhat more briskly, but the improvement can hardly be expeceted to last.

IT TAKES $20,000 worth of postage stamps to mail THE MAULE SEED catalogue for 1905. It contains 152 large pages, full from cover to cover of illustrations and descriptions of the best and newest things known in horticulture. As the original introducer of Prizetaker Onion, Nott's Excelsior Pea, Davis' Wax Bean, etc., I know what I am saying when I make the statement that never before have I offered so many novelties in flower and vegetable seeds of real merit. No gardener can afford to be without this book, which will be sent free to all sending me their address on a postal card.

WM. HENRY MAULE, PHILADELPHIA, PA.

In writing to advertisers, kindly mention HORTICULTURE

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

W. C. Tabor of New Bedford, Mass., who has made careful records for many seasons, reports that the first crocus bloomed this year on February 27, this being twenty days later than last season and the latest for over twenty years, February 24, 1896, being the latest previous record.

Clucas & Boddington Co., whose canna trade has always been very extensive, report an unprecedented demand already this season from all quarters for dormant roots. Whether this indicates revived interest in the canna, or that stocks generally have not kept over well is not apparent, but in either case this firm is well stocked with good material to supply all demands.

On Wednesday evening, February 22, Washington's Birthday was recognized fittingly by a visit to New York city by a delegation from the fertile districts of Long Island, including C. Bertanzel, Jack Everett, the two Dunebroskys, John and Steve, Ed. Johnson, and Jimmy Bell, and an old-fashioned protracted bowling contest was indulged in, the intermissions being well filled in with vocal selections by the Rickards Bros.

CATALOGUES RECEIVED

Andrew Jackson Norton, Boston. Old Hickory seeds. A very well-prepared catalogue, with attractive cover in colors.

Burpee's Prize Supplement. Tells of the winnings of the past year by the seeds sent out by this hustling Philadelphia seed-house.

W. W. Hunt & Co., Blue Hill Nurseries, Hartford, Conn. Calatogue of fruit and ornamental trees, shrubs, and garden plants in choice selection.

Bay State Nurseries, North Abington, Mass. A comprehensive list of hardy trees and shrubs, ornamental evergreens and herbaceous plants, Contains the cream of this class of material.

Ross Bros., Worcester, Mass., Annual Catalogue of Seeds and Implements. Resplendent in a scarlet cover, appropriately adorned. Comprises a big list of seeds and garden requisites.

Dreer's Hints and Suggestions for the Garden is an illustrated folder, listing some interesting and valuable novelties in flower and vegetable seeds for 1905. Among them are the hybrid delphiniums which won a gold medal at Boston last year.

Business Changes

Whittle & Riggs has been incorporated at Albany, N. Y.

Adams, Morgan & Co., succeed Andrew Peterson at Paxton, Ill.

The Egg Harbor City (N. J.) Cut Flower Company has started business as a retail flower establishment.

The Universal Horticultural Establishment has been incorporated with capital $125,000 at Jersey City, N. J.

J. I. Gurney, Dorchester, Mass., has filed a petition in bankruptcy. Liabilities are given as $1,708 99; assets none.

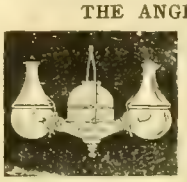
The Green Mountain Conservatory opened for business on March 1 in a store in the Times Block, Bellows Falls, Vt.

H. F. Littlefield, Worcester, Mass., has opened a new store at 407 and 409 Main Street. This is a very central location and well adapted for transient trade.

The wholesale cut flower interests in New York are gradually closing in on West 28th street. Ford Bros. will remove from West 30th street to 48 W. 28th on or about April 1, and will have a spacious and well-appointed establishment. Joseph S. Fenrich is also to remove, either April 1 or May 1; from W. 30th to 37 W. 28th, the store formerly occupied by the Kurzman-Dacre Company. This will make fourteen concerns located between Nos. 37 and 57 West 28th street

News Notes

In the New York cut flower market, the white lilac Marie Le Graye is seen in goodly quantity, and in so fine a grade that it has displaced all other white sorts in favor.



Charles Simons, who left Montpelier, Vt., on January 7th, charged with embezzlement by Emslie & Broadfoot, has been arrested in Boston, and sent to Montpelier, where he will be given a hearing later.

The opening auction sale for the spring season of 1905 will take place at 54 Dey street, New York, where the voluble Wm. J. Elliott will once more face the customary audience of distinguished buyers, on Tuesday, March 14.

Both the Wabash and P. R. R. are making a schedule of excursions for visitors from out of town to visit the great display at Phipps Conservatory, Schenley Park, Pittsburg, which opens much earlier this year, owing to the lateness of Easter Sunday.

Frank Millang puts Bertha Rath in the first rank as a commercial white carnation. This variety is grown by E. Nicol of West Somers, N. Y., with such good results that he will continue to devote his entire establishment to it the coming season, building additional houses for it.

THE ANGLE LAMP

No article advertised in our columns could be more serviceable to the florist located where neither gas nor electricty are available for lighting purposes (and there are very many such), than the Angle Lamp. Its peculiar construction throws the light downward with no under-shadow, which is true of no other kerosene burner. This advantage, as well as the fact that it makes no smoke or odor, is lighted and extinguished like gas and gives a remarkably abundant steady light, renders the Angle Lamp a value in the work-rooms, potting-shed, or office that will be quickly appreciated when once it is used.

CLEMATIS MONTANA GRANDIFLORA

Clematis Montana Grandiflora

A variety of Clematis which, when better known, is destined to become as popular as Clematis Paniculata, its main value being in the fact that it flowers in advance of all other hardy climbers, frequently beginning to expand its flowers as early as the last week in April, continuing well through May. These flowers are from 1 1-2 to 2 inches in diameter and of a pure white color, and are produced in such masses as to completely hide the plant, which is of remarkably strong vigorous growth and insect and disease proof.

Stock limited. Strong two year old plants

35c. each; $3.50 per dozen

Clipper Lawn Mower Co. DIXON, ILL.

The Mower

that will **Kill all the Weeds in your Lawn**
If you keep the weeds cut so they do not go to seed and cut your grass without breaking the small feeders of roots, the grass will become thick and the weeds will disappear.

The Clipper will do it. Ask your dealer for them. If they have not got them, below is the price: No 1—12-in. Mower, $5; No. 2—15-in. Mower, $6; No. 3—18-in. Mower, $7; No. 4—21-in. Mower, $8. Send draft, money order or registered letter.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

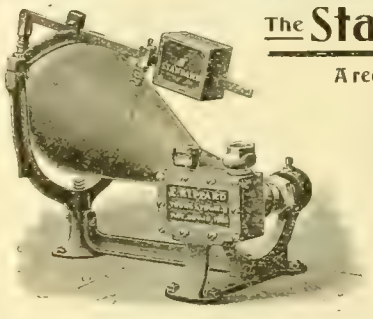
FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅜- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.



Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

ASK FOR SPECIAL WORLD'S FAIR CATALOGUE No. 554.

Exterior view of "U" Bar greenhouse designed and erected for Mrs. A. A. Anderson, Greenwich, Ct.

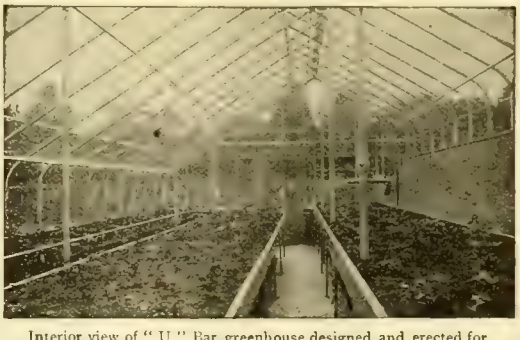
We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water



have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Lachenalias

Botanists tell us that the genus Lachenalia contains about forty-two species, but to cultivators or horticulturists they may be all eliminated to six good kinds. They are natives of South Africa, principally the Cape of Good Hope, and are called Cape Cowslips. They are bulbous plants, and belong to the lily family, blossoming in late winter or early spring in the cool greenhouse.

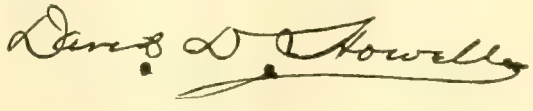
They have been favorites with me since away back in the '80's, when in Kew, I had, under the direction of Mr. John Garrett, collaborator with Nicholson in his great work "The Dictionary of Gardening," a splendid lot of Lachenalia tricolor to look after. There in Kew we grew them in a cold frame all winter with only a mat to protect them from the cold. The secret in growing this kind of plants is to keep them cool, and give them as little fire heat as possible. In fact, this holds good with most plants coming from the Cape of Good Hope.

The cultivation of these beautiful little plants is very simple, and they can be grown either by the professional or amateur with the greatest of ease. As an illustration of this, the first and best hybrid, Lachenalia Nelsoni, was raised by a clergyman in his window. Lachenalias have to be potted every year, and early in August is the best time. We have had the best results by using shallow, six-inch pans. Good drainage is necessary, and the compost consists of two parts loam and one of leaf mould, with a dash of sand and a little sheep manure. In a six-inch pan we usually plant nine or ten bulbs, covering them with about half an inch of soil. After this the plants are given a good watering and placed in a cool frame with a shutter over them. No water is given again until they start to grow and then they can be given all the light necessary. They are left in the cold frame until danger of frost, when they are removed to a cool greenhouse, where the temperature runs from 40 to 50 degrees Fahrenheit. Plenty of light and air is advisable at all times to secure a sturdy growth. As soon as the flower spikes appear, a little artificial manure may be given. Clay's Fertilizer is good.

As to the lasting qualities of the flowers, outside of some orchids, I know of none better. Two to three months is no uncommon time for the flowers to last. The batch of plants of L. Nelsoni that I exhibited at the Massachusetts Horticultural Hall on Saturday, February 11th, was in bloom two weeks before Christmas.

No doubt but this plant would make an excellent novelty for florists at Christmas, but the bulbs are expensive, costing from twelve to fifteen cents each. It is very strange they are so expensive, because they increase more rapidly than freezias and are just as easy to grow.

The two kinds that are most popular are Lachenalia tricolor and Lachenalia Nelsoni.



Harvard Botanic Garden, Cambridge, Mass.

Cineraria Stellata as a Florist's Flower

Quite a novel feature in decorative groups was exhibited in the window of A. W. Smith, Pittsburg, Pa., during the latter part of last week, a large assortment of Cineraria stellata being on exhibition. The numerous varieties of this flower seem to be the offspring, by various crosses, of C. malvafolia, lanata, populifolia, and probably some others. This class of cinerarias has been grown quite extensively by Mr. Smith the past winter, one entire house being devoted to their culture. He uses them both for decorations and cut flower. An immense pyramid of Lilium longifolium rises on the side of one of his windows; at the summit of the pyramid is a towering specimen of cineraria stellata, and between the lilies are arranged many colored plants of cinerarias, which gives a charming effect, and commands the admiration of all passers by.

These plants can also be used successfully by knocking four or five out of pots and bunching them together in a jardinere, either as one color, or mixed, which are equally pretty and useful. If grown in 5- or 6-inch pots in a temperature of 40 to 45 degrees, allowed to become pot-bound, and kept well watered, they will stand a lot of knocking around, and can be used in decorations two and three times. They are also very useful for cut flower purposes, lasting as long as some carnations. The white varieties are a valuable acquisition for funeral work, especially when mixed with lilies. Used in this way, they are quite as pretty as the combination of lily of the valley and Primula Forbesii.

Some varieties attain a height of five feet and over. These are used to advantage among tall palms and give life to the monotony of so much green. Cineraria stellata is taking its rank as a useful commercial plant — as is Primula obconica over Sinensis — and is destined to play a prominent part in the future of decorations.

Dahlias

Although the dahlia has been in cultivation in this country for many years, it has probably never been so popular as it is now. Its present wave of popularity started in England a few years ago, when some of those charming varieties of the cactus class which we have now, were produced, and like many other extra good things, they soon found their way into American gardens, where the work of improving was continued, with the result that we have now an almost endless number of varieties that are far superior to anything we had about ten years ago. And many very large collections have been grown in different parts of the country the last few years, especially in Newport, R. I., where they have been in great demand for table decorations. Solid colors of white, pink, yellow, and red being, of course, most in demand, with the "Catherine Duer" well in the lead as a red. This was raised in Newport by William Allen, gardener at the Travers place. It is a decorative dahlia of a very pleasing shade of red, with long stiff stems, and is an excellent keeper, which makes it very valuable for "making up," although it is not so graceful in form as many of the cactus class.

The cultivation of the dahlia is very simple, and with their wide range of height and color, and long season of flowering, are very good subjects for decorating grounds in many different situations; but when extra good flowers are wanted, they need a good deal of attention, and I would advise the following system of cultivation:

Select an open, sunny situation. Manure the ground well, and spade in deep. Use strong plants from spring cuttings, or small old roots. Plant not earlier than June 1st in rows 3½ feet apart and 4 feet between the rows. Allow only one shoot to grow up from the root and pinch when about one foot high, so that three or four strong branches will come from near the ground. Tie each separately around the stake, cut out all weak, or unnecessary shoots as they come, so as to prevent from growing into large bushes and exhausting themselves. Disbud, leaving strongest one only to each stem. Keep all old flowers cut off. Stir up the ground often with a spading fork, but not deeply after roots come near the surface, and when they show signs of hunger by their foliage turning lighter in color, give liberal doses of liquid manure about once a week. A sprinkling of bone meal worked lightly into the surface of ground is also good. Water thoroughly when dry. Keep a sharp outlook for enemies, and destroy them as soon as possible.

Any varieties which cuttings are wanted from should be started now without delay; a greenhouse is the most satisfactory place for this. The roots should be put in shallow boxes, and covered with any light kind of soil and placed in a sunny position — not under a bench, where they are too often found — and with a temperature of about 60 degrees, the shoots will be about two inches long and ready for cuttings in about four weeks. The strongest only should be taken and put in an ordinary propagating bench, where many of the varieties will root in ten to twelve days. Others take three to five weeks. They should be potted in small pots and kept growing till well established, then old stools and plants removed to a cooler place and water gradually withheld to check growth till planting time. Propagation by seed is also very satisfactory and fascinating, especially with the famous Luther Burbank seeds, with which a large percentage of excellent varieties may be depended on. If seeds are started by March 1st, many of them will flower early in summer.

Good clear white and pink varieties in the cactus class are still rather scarce. Among the best in white are, Winsome, Lord Roberts, and Keyne's White, and I consider Kriemhilde the best pink I have seen. Good yellows are John H. Roach, Hobbie's Yellow, Jealousy, Volka, and Mrs. Charles Turner, which is considered by some growers to be of decorative type, but is certainly a true cactus when in its best and true form, and the reason it sometimes comes in irregular forms is probably caused by excessive propagation. Then among the best reds I have seen are Galliard, Mars, Hunold, Porcupine, Strahlein Krone, Mrs. Bennett, Uhland, Gloriosa, Progenitor, Captain Broad, and Imperator.

There are many excellent varieties in other colors. Some of them are Beatrice, Britannia, Countess of Lonsdale, Earl of Pembroke, Lady Edmund Talbot, Berenice, Lovely Eynsford, and Village Maid.

There are also many good varieties for cutting purposes in the single, the decorative, and the show classes, especially in the singles, since we have got several varieties of the 20th century type.

James Robertson

Roses! Roses! Roses!

Next week at Horticultural Hall, Boston, will be displayed the most remarkable exhibition of roses ever seen in this country. Rose growers, rose buyers, and rose lovers generally will attend. HORTICULTURE honors the occasion with a rose issue for that week. Everybody will read it. If you are looking for business with the rose people, advertise in this issue of HORTICULTURE. Mail copy at once, *otherwise you're too late!*

If you have orders to give for any flowers, plants, or horticultural material of any kind, do not fail to give HORTICULTURE's advertisers a chance. The best houses are represented in our advertising columns.

South American Horticulture

III. SAO PAULO

It was on the first carnival day, in February, 1903, that I got on the Sao Paulo train at the Santos depot. A heavy thunder-shower was floating down on Santos, and odd enough the dominoes and clowns looked, as they dodged into doorways, coffee-houses, and street cars, with shouts and tin horns. Still intoxicated with the beauties of Santos harbor, I felt this farewell, amid a big masquerade scene, under palm archways and thousands of paper flags and lanterns, as a beginning of the second act in a continuous "dulce jubilo," in which the land seemed to enjoy its deliverance from all revolutionary outburst of passions. In fact, the whole scenery of the mountains, railroad station, train, and all, I might easily have imagined as belonging to the general carnival temples and decorations. But I had been warned, and told in Santos, that I was going through the clouds on this cable train, and, no matter how bright and sunny it was in that city, it would be foggy and rainy on the mountains. Sure enough, so it was, on all three times that I went over the road: sunshine on both ends, and rain and clouds on passing the summit of the mountains, which forms the edge of the high plains of the state Sao Paulo.

By the time we had left the level shores and entered the first cañon of the mountains, the thunderstorm of the afternoon had entirely cleared away, and behind us Santos and its surrounding harbor and islands had perfect summer weather; but no sooner had we been pulled up several miles by the combined cable and steam engines, when fogs and clouds descended, and we could hear the dropping of water on the car-tops. Sometimes it would for a few minutes clear off, and we had below and overhead the view of grand mountain walls of bare granite or steep slopes descending in an angle of 70 to 80 degrees to the wheels of the cars, covered with palms, ficus, oleos, and other tropical trees to the very top, only leaving space and spot, where it was impossible for any vegetation on blank, bare rock, to start. From most every mountain side you see a creek — *riveron* — shooting its waters 50 to 100 feet into the valley below, where palms and ferns and water-plants border the basin, which the constant fall of water has scooped out. How they ever built the railroad through this weather-hole, or how it can be kept intact, when a tropical thunder-shower swamps the cañons, I didn't try to think out. Enough that we got up and the other train, — the counterweight on the cable, — got down safely. In another hour's ride we were in Sao Paulo.

As soon as the train stopped in the new big depot, I entered the main entrance of the park, which is located just beyond the tracks, where a sign tells you that you can't get in unless you wear decent clothes and shining boots. I strolled in and had a look around among the palms and the flower-beds, went through the half-shaded rock scenery, and stood at the side of the artificial pond, where curious tropical birds stalk around, or stand on one leg.

The thing which impressed me most at the time was the general neatness of the whole grounds. The walks were covered with very fine colored gravel, black and white, perfectly smooth and clean, as if brushed by a handbrush; not a water-hole, not a rain-gutter to be seen; not a single piece of paper or a piece of a twig, or a faded flower-petal in sight. There was not a weed, not a broken plant, or bush waiting for the next day's clean-up. There weren't so many employees around as to be conspicuous. This latter fact was perhaps due to the climate, which requires, on account of its rapid-producing qualities, very little filling in of plantations. Furthermore, I believe it due in part to the absence of cold, sweeping rain- and hail-storms. During the entire twelve months I stayed in Brazil I never experienced a rain-storm with cold winds, nor a hail-storm. True, the tropical rains are heavy, but tropical trees have mostly thick foliage, especially adapted to withstand them, and also to shelter the more tender plants beneath. Either the winds, for some geographical or astronomical cause, lack velocity in the sub-equatorial zones in Brazil, or it may be due to the immense, all-covering forests, which give a general shelter to the valleys along the rivers; certain is it, that rain-storms come from straight overhead, as if out of an immense douche, and are never driven by furious winds across country.

On the following day I went to see Mr. A. W. Dietsch in his flower-store on rua de Sao Bento. Mr. Dietsch is a German by birth and gets his seeds, bulbs, and fertilizers from his native country, trading, in exchange, orchids which he has gathered by local woodsmen. The seed business is becoming of growing interest; all seeds not of tropical plants, for flowers as well as vegetables, are imported to Brazil. As yet nobody has been successful in growing to maturity seed-crops of northern plants in the tropics or subtropics. Of orchids, the lælias and cattleyas were in excellent condition for shipment, which was made in the usual large wooden cases, holding several hundred each, with big air-holes cut in all sides, as leaving no space larger than half a foot square unventilated; the packing consisted of dry moss. There is no fixed price in Sao Paulo on wild orchids, the gatherers simply coming in with a load to the stores or nurseries of the florists and bargaining for the same, the value being according to variety and quantity of plants, the largest number bringing the highest prices, while small lots are hard to sell.

Carnival at this time was at its height, and the flower-stores were busy, as many private picnics and excursions took place. The main resources of the florist for decorations and bouquet work were dahlias — cactus variety — and camelias, while the chrysanthemums were just budding into fair-sized buttons, and roses were not plentiful after the two warmest months of mid-summer. For greens were used mostly Asparagus Sprengeri.

The nursery of Mr. Dietsch was situated in the suburb heights, south of the city. The soil is a very mellow red loam, similar to that in parts around the bay of San Francisco, Cal. The soil would get, during the day, as warm as a hot-bed, yet I was told by experienced gardeners that it would never burn any plants, making it, however, necessary to have all watering done by half past eight A.M., or after sundown. Tea roses and chrysanthemums were grown, as if under glass, with average results. Cosmos gave good results as a new introduction in that country, sowing itself again from a few stalks left after the main crop of flowers had been picked, thereby making it only necessary to pull out the big stalks, rake the bed over and thin out, where the self-sown seed had dropped too heavy.

The Editor Has His Say

The Queen of Flowers holds a reception at Boston next week. Come, one and all, Don't miss it.

Why is rose Killarney not grown more generally? In those markets where this handsome light pink bud is regularly in stock, it is a favorite and is worthy of being such.

Our frontispiece this week shows part of a flower cluster of the Farquhar rose. No American rose of recent introduction has received a greater welcome, or given better satisfaction in the garden, or for spring forcing than this splendid climber, the product of Jackson Dawson's genius. In this section it is well established as a standard variety.

The annual spring exhibition of the Massachusetts Horticultural Society, with its gorgeous display of spring-flowering bulbs, cyclamens, orchids, carnations, forced shrubs, and hard-wooded greenhouse plants, is always a notable affair, and always well worth seeing. This year, in connection with the American Rose Society's exhibition added to it, this event should, and doubtless will, draw an immense attendance of visitors from far and near.

Our reports from the leading cut-flower markets indicate that the heavy spring over-production is on in earnest, and that for the next few weeks the dealers' ever-present problem will be, not what prices he can get, but how to unload at any price. Over-production at certain times is unavoidable, and its effect on the market is not pleasant. Anything that will tend to minimize it should have the united support of growers, dealers, and reputable retailers. A scrutiny of the markets reveals the fact that the same proportion of low-grade material is being received as in periods of scarcity. Why not discard this stuff before shipping? It is bound to be a loss anyhow, and its presence in the market necessarily affects values on all qualities, encourages the speculative street buyer to assume the offensive, and to assail successfully established values. Cut out the scrubs.

Once in a while we are called upon to listen to a story of competition — competition which, in the eye of the aggrieved one, is of course always ruinous and unfair. Yet, with all its irritations, business rivalry is not without its benefits. It may disconcert us for a time, but it is a wonderful eye-opener, bringing us to a realization of our dormant abilities, and developing resources which otherwise would never have been drawn upon. It sharpens our intellect and quickens our activities. The very suggestion of a lower market value on any article we produce throws us into a spasm, but after we have put our wits to work to meet the situation, we find that we are still a long way from "going to the poor house."

Is bulbous stock, so-called, as forced for the cut-flower trade, unprofitable? The forcers tell us that it is and from our knowledge of the first cost of the bulbs, the possible shrinkages in forcing, and the expense of forcing and marketing as compared with the wholesale market values, we cannot see how the growers can come to any conclusion other than that the business is an unprofitable one. Some varieties there are, of tulips, daffodils, etc., which can usually be depended upon to yield a fair return on their cost, but, of late years, these would seem to be the exception. Were these sturdy blossoms left out of the regular market offerings, however, we should miss them sadly, yet it is not to be expected that growers will continue to devote their time, money, and effort year after year to an unremunerative specialty. How can the first cost be reduced, or the market value raised? One or the other would seem to be in order.

The Spring Feeling

We are told by a native of the green isle that on St. Patrick's Day the warm side of the stones turns up. The time will be opportune for our readers, under the genial influences of approaching spring, to turn the warm side of their hearts to the advertisers in this issue of HORTICULTURE. Please look over the Buyers' Index, and see what is offered there that you should have. Then write at once to the advertiser and say you did it on HORTICULTURE's advice. The advantage will be mutual and HORTICULTURE *will continue to grow.*

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Many claim that the time is approaching when the carnation grower will cultivate largely the varieties of his own origination, and there is much to be said in favor. If one hybridizes a flower and watches it carefully as it matures its seed, plants the seed and observes it until it blooms, he cannot but become acquainted with its peculiar requirements and be better able to grow it intelligently and profitably. On the other hand, he reads of a new variety just about to be introduced elsewhere. Possibly he sees it growing and likes its habit or general appearance, and orders a thousand or so at fancy figures. In his estimation it is a good investment. But when he tries it for himself and makes a study of its habits, it is often a whole season or more before he can decide whether there is any money in it or if it is one more gold brick. Donald Carmichael of Wellesley has a seedling which he designates the "Scarlet Gem." It is a cross between Red Bradt or Chicago, as seed parent, and another scarlet seedling. The flowers are not of the largest size, but its free blooming and quick developing qualities make it the greatest money-maker Mr. Carmichael ever grew. From about 500 plants he has cut, on an average, of over a thousand a month since October. Mr. Carmichael has also a fine white seedling from Prosperity, as seed parent, crossed with another white seedling. It has many of the habits of the seed bearer, but blooms much earlier. Another of Mr. Carmichael's seedlings of great promise is a light pink from Lawson crossed with a pink seedling. It is designated as No. 2093.

J. W. Foote, Malden, has a large white seedling which he calls No. 6. It is a cross from Fair Maid and a white seedling, Fair Maid being the seed bearer. Mr. Foote describes it as being very large and free and a fine keeper and shipper.

George Ayer of Reading has a crimson under cultivation which promises well. The seed bearer, Roosevelt, is crossed with a yellow seedling. It is a shade lighter than Harry Fenn, very free and does not split.

C. E. Dickerman of Dorchester has several seedlings of merit. One, a white, designated as No. 9, is a cross between Prosperity, as parent plant, and Apollo. It is a clean, vigorous grower, and a bursted calyx is yet to be seen. Another is a fine yellow, a cross between Lawson and Crane, Lawson being the parent.

John McFarland is bringing to the market some exceptionally fine Ulrich Brunner roses. Mr. McFarland was first in the field this season with this variety, having been cutting for the past three weeks at prices ranging from twenty-five to fifty dollars per hundred.

STATE FLOWERS

Here is some late information on the subject of State flowers. The following have been settled by a vote of the schools: Alabama has chosen the goldenrod, Arizona the cactus, California the California poppy, Colorado the purple columbine, Delaware the peach blossom, Florida the japonica, Georgia the Cherokee rose, Idaho the syringa, Illinois the rose, Indiana the corn, Iowa the wild rose, Michigan the apple blossom, Minnesota the moccasin, Mississippi the magnolia, Missouri the goldenrod, Montana the bitter root, Navada the sage brush, New Jersey the sugar maple, New Mexico the crimson rambler rose, New York the rose, North Carolina the chrysanthemum, North Dakota the goldenrod, Oklahoma the mistletoe, Oregon the Oregon grape, Rhode Island the violet, and Utah the sego lily. The State Legislatures have adopted flowers for the following States: Arkansas the apple blossom, California the golden poppy, Florida the orange blossom, Louisiana the magnolia, Maine the pine cone, New Hampshire the oak branch, Nebraska the goldenrod, Ohio the carnation, Oklahoma the mistletoe, South Dakota the anemone, Texas the blue bonnet, Vermont the red clover. In Kansas the sunflower is known as the State flower, and the women's clubs of Washington have adopted the rhododendron. Now that some of the Legislatures have adopted the flower voted for by the children, it is likely the other Legislatures will do the same. — *Boston Transcript.*

THE WAY TO DO IT

The city of Marlboro has taken the brown-tail moth nuisance by the horns — if such a mixed figure will be permitted us — by declaring the "critter" a menace to health and sending out a notice which reads: "All owners of trees and shrubbery shall keep the same free and clear of all moths and their nests. If the above nuisance exists on your premises you are hereby ordered to remove the same on or before March 13. Should you fail to do so, this board will proceed to act under chap. 75, sec. 67, of the revised laws of Massachusetts."

That is business-like and praiseworthy. People can rid themselves and the community of a pest of this sort if each will attend to his own particular domain. Those who are too lazy to do the work themselves or too mean to hire it done, should be given a taste of the $20 per day fine for permitting nuisances to exist on their premises. We shall watch the Marlboro crusade with interest. — *Boston Journal.*

PLEASE APPRECIATE

A special advantage given to advertisers in HORTICULTURE, *without charge*, is the Buyers' Directory which tabulates the advertisers in each issue of the paper under the respective heading of the goods offered. This is a convenient ready reference for buyers and its value to advertisers is obvious, being in fact a *double* announcement without extra cost.

Personal

J. M. Keller and Julius Roehrs have returned in good order to New York from their Cuban trip.

A. Dimmock was due to arrive in New York, Saturday, the 18th inst. on the Lucania, fully equipped for Sander's spring campaign.

We learn that the Lucania was obliged to put back into Queenstown for repairs and will be several days late in consequence.

Mrs. T. O. Richardson, who has been absent from Newport for two years, will occupy her beautiful place on the Cliffs this summer. Mrs. Richardson is an enthusiast in horticulture. Besides taking a great interest in her own estate, she was a liberal contributor to the Newport Horticultural Society.

On Wednesday evening March 15, occurred the wedding of James McHutchison of New York, to Miss Grace Elizabeth Edgar, at the home of the bride's parents at Waverly, Mass. There was a large attendance of friends of the happy couple, whose esteem for both bride and groom was evinced in a glittering array of beautiful presents. May the spirit of happiness and geniality that prevailed on this joyous evening continue with Mr. and Mrs. McHutchison through a long, fruitful, and prosperous home life.

TWO NEW WINTER-FLOWERING BEGONIAS

Translated by G. Bleicken.

Begonia gigantea elegans is a cross of B. Sharffiana and Pintaviensis, resembling the first in habit, being strong and bushy, with large leaves, dark-red underneath and strongly haired, upper side olive green with thickly white haired, leaves, and flower-stems alsoh airy. The flower stalks rise above the foliage, branching in two above, the umbel being bell-shaped. The flowers are white, red-haired underneath, making a charming color contrast.

Begonia Credueri compacta robusta is a cross between B. Scharffiana and metallica; it is a dwarf begonia and on this account to be recommended. The originator is Mr. E. Benary, Erfurt, Germany. — *Die Gartenwelt.*

OBITUARY

Mrs. Coolidge, mother of the Coolidge brothers of South Sudbury, Mass., died on March 8.

Charles T. Siebert of Pittsburg, once proud of the title of "the restless and sleepless florist" has at last come to rest and sleep, after a long illness, on March 7, at the age of 53 years. Mr. Siebert was a favorite with the members of the profession and a loyal supporter of the local club and the Society of American Florists. A widow and three children survive him.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ROSE SOCIETY

Boston Exhibition, March 23, 1905.

Intending exhibitors are respectfully notified that the judges have been instructed by the executive commitee that they must adhere to a strict literal interpretation of the schedule. The staging of one flower over or under the number called for, or the placing of an H. T. in an H. P. class, or the reverse, will positively disqualify the entry. *So Please Be Careful.*

President Montgomery has appointed the following named gentlemen to act as judges of the exhibits entered for the society's regular and special premiums. W. F. Sheridan of New York City, Peter Crowe, Utica, N. Y., J. F. Huss, Hartford, Conn. All of these gentlemen have accepted.

The office of the secretary on Thursday, Friday, and Saturday, March 23, 24, and 25, will be in Horticultural Hall, Boston, where members may pay their dues and, after signing the members' registry book, be provided with tickets for the banquet to be given by the Horticultural Interests of Boston to the American Rose Society, on Friday evening, March 24, at the Thorndike Hotel.

The annual meeting of the American Rose Society will be held at Horticultural Hall, Boston, on Friday, March 24, at 11 A.M.

An additional special prize is offered for award at the Boston exhibition, March 23 to 26, by A. H. Hews & Co., Incorporated, North Cambridge, Mass., of a silver cup, value $25, for the best specimen pot-grown rose in the exhibition, ramblers and climbers excluded.

Wm. J. Stewart,
Secretary.

TO ROSE SOCIETY VISITORS

The new Horticultural Hall, Boston, where the meeting and exhibition will take place is situated in the Back Bay district, corner of Huntington and Massachusetts Avenues. Visitors coming over the N. Y. N. H. & H. R. R. and wishing to go direct to Horticultural Hall should leave the train at Back Bay station, walk north a short distance on Dartmouth Street to Huntington Avenue, and take a car going west. All Huntington Avenue cars pass Horticultural Hall. The corresponding station on the B. & A. or N Y. Central R. R. is known as Huntington Avenue and the same directions apply.

All elevated trains for subway connect in the subway at Park Street or Boylston Street station, with Huntington Avenue cars. Hotels conveniently reached from Horticultural Hall are the Lenox, Copley Square, Brunswick, Victoria, Vendome, and Thorndike.

Visitors may have their mail addressed in care of Horticulture, 11 Hamilton place, and arrangements will be made for its prompt delivery.

BUFFALO FLORISTS' CLUB

The regular meeting of the Buffalo Florists' Club will be held on Tuesday evening, March 21. An entertainment and banquet will follow and a general good time is expected.

CHICAGO FLORIST CLUB

The smoker of the Chicago Florist Club on March 9, was a great success. About forty members were present. Messrs. Amling and Howard of the entertainment committee are to be congratulated on their success. Des Plaines, High Ridge, Joliet, Blue Island and Rose Hill were represented. Previous to the entertainment a short business session was held and action was taken on the Easter plant exhibition to be held March 23. Also great enthusiasm was awakened over the prospects of the Illinois State Florists' Association, many club members joining the new association. There was music and song galore. Master of Fun Rudd is warranted to cure the blues. Johnny Degnan's "Loidy" was a hit. The Balluff Brothers songs were good, and the old rusty Chicago Florist Club quartette opened a new field for the implement men. (Apologies to Asmus, Winterson, Degnan and Balluff.) Altogether a pleasant evening was spent, and it closed with a hope for another.

On exhibition by A. Frey of Lincoln Park were some magnificent hybrids of Cineraria stellata. The Chicgao Carnation Company sent a fine vase of White Lawson, also one of Cardinal. The committee on exhibits reported as follows: Your committee have examined the exhibit of Cineraria plants grown by A. Frey and find them well-grown specimens of a cross between Cineraria stellata and Cineraria hybrida. The plants while not producing such large flowers as hybrida type partake of the slim branching character of the stellata, thus forming a happy medium. We consider these plants meritorious and worthy of honorable mention. We beg leave to report on the two vases of carnations exhibited by the Chicago Carnation Company that the White Lawson flowers are borne on good long stems of a stiff character, the color pure white and beautiful in every respect; the Cardinal vase is equally fine and worthy of honorable mention.

E. A. Kanst,
W. H. Kidwell,
A. H. Schneider,
} *Committee.*

FLORISTS' CLUB OF WASHINGTON

At the annual meeting of this organization last week officers were elected as follows: President, W. F. Gude; vice-president, Charles Henlock; secretary, Peter Bisset; treasurer, W. H. Ernest. The club presented secretary Bisset with a handsome silver bread-plate in recognition of his valuable services to the organization. S. A. F. matters were discussed. A very fine exhibition of carnations was made by local and distant growers. F. R. Pierson Co., Tarrytown, N. Y.; J. N. May, Summit, N. J.; J. L. Dillon, Bloomsbury, Pa.; H. Weber & Sons, Oakland, Md.; Guttman & Weber, New York; W. J. Palmer & Son, Buffalo; A. B. Davis & Son, Purcellville, Va.; J. E. Haines, Bethlehem, Pa.; Cottage Gardens Co., Queens, N. Y. J. R. Freeman and F. H. Kramer were among the prominent exhibitors.

NEW YORK FLORISTS' CLUB

The meeting on Monday evening, March 13, was attended by sixty enthusiastic members, and the paper presented by Robert Kift was enjoyed exceedingly. The following inquiries taken from the question-box were assigned to the next meeting:—

"What is the most valuable plant introduced in the memory of any member of the club?"

"Why are carnation growers more progressive than rose growers?"

"Is horticulture in the United States as far advanced as in Europe?"

Resolutions were read on the death of the mother of H. Hentz, Jr.

New rules governing the exhibition management were adopted. The expected rose show did not materialize to any great extent. There were on exhibition, La Detroit rose and antirrhinums from J. Breitmeyer's Sons, a new rose from Peter Bisset, White and Varigated Lawson and Daheim, also Killarney rose, from F. R. Pierson Co., and the Scott Fern from John Scott. The house committee again did nobly, and supplemented their usual attentions with choice ballads well rendered by J. B. Nugent and Alfred Bunyard.

KENTUCKY SOCIETY OF FLORISTS

The carnation and rose meeting held Tuesday night at the store of Nanz & Neuner was a very successful one. Those favoring us with exhibits were the Chicago Carnation Co., Joliet, Ill., a very large and fine exhibit of the Cardinal, Lady Bountiful, Enchantress, White Lawson, Mrs. M. A. Patten, Harlowarden and other favorites. The J. D. Thompson Carnation Co. showed some very good Robert Craig, also Enchantress, Mrs. M. A. Patten, The Belle, and Nelson Fisher. John E. Haines, Bethlehem, Pa., showed Mrs. John E. Haines, which promises to be a very good one, also the Star of Bethlehem. Davis Bros. Co., Bloomsburg, Pa., showed the Crisis and Mary Albert. A. Rasmussen, New Albany, Ind., Mrs. Lawson, Enchantress, and Hoosier Maid. The Indianapolis Flower & Plant Co. and John Hartje, Indianapolis, showed Candace. Baur & Smith, Indianapolis, showed Indianapolis and Flambeaut The Bride, last year's success, was exhibited by John N. May, Summit, N. J., and Red Lawson by W. J. Palmer & Son, Lancaster, N. Y. H. Weber & Sons, Oakland, Md., showed My Maryland. R. Witterstaetter, Cincinnati, O., sent the Aristocrat and Afterglow. Patten & Co., Tewksbury, Mass., showed Mikado and Pink Patten; and another shipment from a distance that arrived in good condition was that of the F. R. Pierson Co., Tarrytown-on-Hudson, N. Y., consisting of Variegated Lawson, White Lawson, Daheim, and Victory. Charles W. Rayner, Anchorage, Ky., showed Bride, Bridesmaid, Ivory, and Golden Gate roses. John Breitmeyer's Sons, Detroit, Mich., sent

La Detroits, also some of their fine Antirrhinums in three colors. Peter Reinberg, Chicago, Ill., showed Uncle John and Sunrise, and Jacob Schulz staged a lot of good seedlings. Nanz & Neuner showed some good stock of many varieties, as did also Charles W. Reimers and Leo. Zoeller. It was a show worth seeing.

MASSACHUSETTS HORTICULTURAL SOCIETY

The garden committee of the Massachusetts Horticultural Society and other guests visited the conservatories of George F. Fabyan in Brookline, on Tuesday, March 7. Here were seen the products of George Stuart who has had charge of this estate since its acquirement by Mr. Fabyan four years ago. The conservatories are really but one long house separated into four compartments, erected by Hitchings & Co. One can scarcely believe it possible that the superb exhibits of cyclamens, cinerarias, calceolarias, etc., that have so astonished visitors to the Boston exhibitions have all come from an establishment so limited in capacity. A visit to the conservatories only adds to the admiration for a gardener who can accomplish so much with such a variety of plants requiring diverse treatment as are here seen under one roof. The collection is very varied and comprehensive and everything in perfect health. Among the things calling for especial comment on this occasion is the Wootton rose which, with glorious blooms, five inches across, and two-foot stems, would scarcely be recognized by its originator, the rosarian of Baltimore.

NEWPORT HORTICULTURAL SOCIETY

Fortune smiles on the Newport Horticultural Society. Three years ago one of the best exhibitions ever given by this society was held in the Casino, but although successful in nearly every particular, the cost was so great that since then the society's exhibitions have been held elsewhere.

This year, however, a strong feeling was manifested in favor of the Casino for at least the mid-summer show, and a committee was appointed to ascertain what arrangements could be made. The result of their effort is that the members have been informed by superintendent Barrett that the governors of the Casino will gladly let the Newport Horticultural Society have the use of the Casino for all the exhibitions free of expense, the only conditions imposed being that every member of the society unite in an effort to make the exhibitions worthy of the Casino and of Newport. The full significance of this liberality can be appreciated only when it is stated that the Casino on a former occasion cost $100, in addition to half the gross receipts.

The executive committee have completed the schedule of premiums for this year. They are the most liberal and comprehensive ever issued by this society. Upwards of one thousand dollars will be offered in prizes, exclusive of specials which may come in from now until September 1. Every possible effort is being made to make this year's exhibitions record breakers, and with a view to this end all petty restrictions of former years have been wiped out, the society hoping thereby to receive many consignments of exhibits from out of town growers, commercial as well as private. Nothing pleases the gardeners better nowadays than to have the up to date florist show what can be done in special lines, and the florist will not likely be the loser if he brings a sample of what he grows to show to the people of Newport.

AMERICAN CARNATION SOCIETY

Registered by the Lakeview Rose Gardens, Jamestown, N. Y. "Gladys," a fine white with blooms three inches and over and stem twenty to thirty inches in length. It has never been off crop this season and has scored 87 points at the Buffalo Florists' Club on February 22.

Albert M. Herr, *Secretary.*

REGISTER YOUR NEW PLANTS

As soon as you have ascertained that a seedling has the requisite merit to entitle it to a permanent existence, and have given it a name, register name and description with the secretary of the national society. The record will then be published and your plant will be protected in its right to the exclusive use of the name you have bestowed on it. For registration blanks and all information write to the secretary,

Wm. J. Stewart,
11 Hamilton Place, Boston.

NEW FANCY-LEAVED BEGONIA HYBRIDS

(From Moller's Garten Zeitung)

Translated by G. Bleicken.

Our Queen, His Majesty Mrs. H. G. Moon — these three new begonias are the result of crossing Begonia Bowringiana and diverse Begonia Rex hybrids by Sander & Sons, Bruges and St. Albans, England. Begonia Bowringiana comes from northern China, seemingly a variety of Begonia laciniata in Nepal and Upper Burmah. This plant is related somewhat to Begonia Rex, but differs from it by its strong tendency to branch, its greater height and profusion of orange-yellow blossoms. The upper side of the leaves is moss green, interrupted by velvet purple-red veins, through which runs a soft, silvery-green middle zone. The underside and the stems are covered with purple-red hairs. Sander & Sons offer the above-mentioned three hybrids, each of which got an award of merit recently in London. The progeny have retained the superior branching habit of B. Bowringiana, thus surpassing the old Begonia Rex varieties.

Our Queen, of which B. Bowringiana is the mother plant, has leaves much more pointed than the parent. Color, dark, velvety olive green, and, between center and edge, a lighter zone, which is dotted with pink and silver spots.

His Majesty, of which Begonia Rex is the mother plant, approaches more nearly the Rex color, lilac-rose and olive green, toning into brown towards the center. The color is darkest in the proximity of the foliage nerves and on the edges.

Mrs. H. G. Moon comes from similar crossing as the last named. The color is dark olive green, running into brown; the intermediate zone is slate colored, with very bright red spots.

By the use of this new Begonia Bowringiana, a very desirable blood renewal has been introduced into the fancy-leaved begonias.

HARDY FLOWER CULTURE

A. Herrington of Madison, N. J., was the speaker on February 4th at the usual weekly lecture of the Massachusetts Horticultural Society. His subject was "Some Aspects of Hardy Flower Culture," and he spoke in part as follows:

"Notwithstanding all that has been written in the past about style and design, there is no garden so beautiful as that untrammeled by the application of needless geometry to its plan and planting. A certain formality may be necessary and right about the house, but those who tell us the garden as a whole should be a thing of formal design are enemies to true gardening. They are perhaps not so through wilful intention, but from lack of knowledge or inability to see and appreciate how their much-vaunted formality circumscribes or prohibits the possibility of good gardening by limiting us to the use of a few forms and types of vegetation adapted to the formal scheme.

"Hence, the floral poverty and meagr beauty of too many so-called gardens, wherein no place can be found for the planting of those beautiful flowers that tell the story of the year from the moment the frost relinquishes its grip of the earth till the time when vegetation again goes to its winter rest. In many gardens where place can be found for hosts of beautiful hardy flowers they are not to be seen there, because of the prevalent erroneous notions that the flower garden is a thing apart of itself, a set arrangement of cultivated beds and borders, formal or otherwise.

"Some attempt is made to display floral beauty and some good results are seen, but so long as our efforts begin and end there we are merely prospecting; we have not discovered the actual mine of floral treasure whose outcroppings are not thus localized. This is especially true of hardy flowers, and when we come to a right understanding of the subject ought we not to find in hardy vegetation the main source of garden embellishment, just as in our permanent plantations we use only hardy trees and shrubs. The purpose in view, therefore, is to suggest means and methods of widening the scope of our efforts, to suggest possibilities for growing and enjoying the beauty of more of the vast floral treasures garnered from many temperate parts of the globe, all these to be further amplified by the substantial additions to the original types that have been obtained under cultivation.

"The flower garden that is here advocated goes beyond the prim beds and borders, although admitting the propriety and necessity of these in their place. It advocates getting as near to Nature as the garden will permit, or, in other words, doing in many ways what Nature does, with a tolerable certainty of good results. It will give us flowers on the hillside, flowers in the valley, flowers in the open sunlight or in the shade, in the grass or in the woodland; in short, it will enable us to have flowers in hundreds of places that surround the home heretofore only devoid of them by reason of our neglect to plant; and, which is perhaps of great importance to many, at a minimum cost of future care and keeping after the original outlay.

"Most of the spring bulbous flowers need no cultivation at all, in the sense

in which we understand or apply that word. They are children of Nature, wild species, abounding still in grassy meadows or leafy woods. We, too, can plant them under conditions of similarity. Snowdrop and crocus, scillas and dog-tooth violets are perfectly happy and infinitely more at home planted in association with trees and shrubs. They often perish from disease, if not killed by disturbance in the deeply dug, manured border, yet associated with trees and shrubs and left undisturbed they will go on from year to year increasing and multiplying in numbers and beauty.

"As these early harbingers of spring fade away, the floral procession is continued with flowers of greater stature and more striking beauty. Of these there is the great group of daffodils. It is essentially a European family but they need not be strangers to our gardens. The home of the daffodil is in the grass; in fact, some of the prettiest species refuse to live more than a year or two in cultivated ground, yet in the same garden planted in the grass, continue from year to year with proportionate increase. All that you require is a grassy spot that need not be mown until midsummer. The smallest nook can be prettily adorned, and if you have an acre or two to devote to the purpose, the possibilities are immense. Planting is a simple matter of lifting the sod and underlying soil, dropping in the bulbs and replacing the sod, taking care to plant the groups in a natural or irregular way.

"A word concerning tulips. The familiar type is that of the garden varieties, of which there are hundreds — important spring flowers, too — but scattered through Europe and Asia are a score or more of beautiful and most variable species that can be semi-naturalized about the shrubbery and plantations and bring to the gardens new forms and types of tulip beauty. There is the sweet-scented yellow Tulipa sylvestris of Great Britain, a charming variety to naturalize, and others with branched stems bearing several flowers, novel in appearance to those who have seen only the solitary flowered, ordinary tulip. Tulipa præstans, from Bokhara is a fine species with sometimes as many as five flowers of a bright orange red on a stem twelve to fifteen inches high, and Tulipa Persica from Persia, is another branching tulip, with brilliant yellow, bronze-marked flowers. In all the tulip family, wild or cultivated forms, few can compare in gorgeous beauty to Tulipa Greigii. Besides these there are many others, and if you would take the species and make a tulip garden of them you would wonder why you had for so long been content with the ordinary garden tulip.

"The continuing of the floral procession brings next to view the taller plants, with larger flowers, and a veritable host is at our command. The massing of a collection of hardy herbaceous plants in a long mixed border is at its best a mere collection of units, yet collections more or less in number mainly represent the extent of hardy flower culture. The collection has its place, but it cannot be made a strong feature of the garden. If our aim is to create pictures in the garden landscape, effects of color, distinctive features in different parts, selections, not collections, must be the rule. As soon as we depart from the collective method and take up the selective, the availability of hardy flowers for garden decoration is enormously increased. For example, take some special class of plants suited to a chosen spot, both from the cultural standpoint and with relation to effect in the garden landscape. Thoroughly prepare the soil, and plant it, and you can create a flower feature that will stand for five to ten years with only the ordinary care of keeping free from weeds.

"The bulbs, numerous as they are, comprise only a part of Spring's contribution to the floral gayety of the earth. Another type of vegetation, of perennial characteristics, offers to the garden a wealth of beautiful material. 'Alpine flowers,' we used to call them, and a rockery, or rock garden, was considered an essential adjunct, in fact a necessity, before attempting their cultivation. Too often they perished from drought or starvation, when planted on ill-constructed rockeries. Many of these gems from the high mountain ranges of the world are just as happy if suitably planted and cared for upon the level ground such as the garden affords. Because they are indigenous to high altitudes, it does not follow they must be strangers to gardens. From these lowly types of high mountain life we can gather an assemblage of pretty, easily-grown plants, and make a spring garden of exceeding beauty. Here are some of the important families: Alyssum, arabis, phlox, sedum, saxifrage, sempervivum, iberis, epimedium, silene, pulmonaria, primula, armeria, and many others. To see and enjoy these to the fullest measure, we must not be content with them as units; we should have them in hundreds and thousands if room permit. Some of them are admirable for planting in broad masses as a fringe or margin to shrub plantations; they may even be used as carpet plants where choice shrubs stand widely apart, but beyond this they justify the making of a special feature, especially, where the topography or geological formations permit.

"Suppose we decide to make an iris garden. Here is a family worthy of ten times the attention it gets in the ordinary garden; and no matter how much space you have at command, you can plant half an acre or more, if the space justifies so extensive a planting, and yet show difference of variety in every square rod with fitness of association throughout the whole arrangement. Instead of a mixed medley of everything that flowers at iris time, consider irises only and see what the family has available for such planting. Do you know that you can have an iris garden that will give you profuse and unbroken succession of loveliness from April well on into July? and that, too, without using the family in its entirety, as some types like the cushion irises and the bulbous class need separate special treatment. An appropriate setting to and background for an iris garden is a belt or plantation of shrubs, planting the irises in bold groups in well-prepared soil in the foreground. The dwarf growers are the early bloomers, and height of growth and time of flowering are in such perfect harmony that there need be nothing incongruous in the arrangement.

"Peonies and lilies, happy in appropriate association, replete in variety, may be suggested for another special extensive planting, a garden of them, in fact. The peony needs no eulogism here, as it is one of the hardiest and best appreciated of hardy garden flowers — something you can plant and leave alone for a number of years. There is an unlimited choice from which to plant. A careful selection of the best should be made, not, however, forgetting some of the species like the Chinese Albiflora, with its great, single white flowers as large as a plate, and varieties in other colors that have been raised from it. Other single flowered species, natives of Europe, and their varieties are important too. The peony season is not a long one. While peonies are not averse to the open sunlight, it should be borne in mind that they do remarkably well in the shade, even quite near to large trees, so that a peony garden might be made a great success in a position where an iris garden, if attempted, would be a failure.

"With the passing of the peony bloom, nought remains for the balance of the year but their own great tufts of luxurious leafage, hence the suggestion to plant lilies with the peonies. To give ample room for development it is essential that we plant our peonies at least a yard apart, as by the time they attain full growth they will completely hide the ground, yet there will be much unoccupied ground beneath or between the great spreading leaves. This is just the condition desired by many lilies. They raise their heads of glorious blossom high in the air, much higher than the peony grows, while the peony foliage overspreading and shading the ground, furnishes comfort, shelter, and protection from burning sun to the lily roots. In this association of peony and lily we have practically adaptability, as well as artistic fitness, and the lily family suffices to continue the flowering interest in the garden almost to the end of the year.

"Numerous other groups of flowers have strong claims for consideration. Suppose you have a good, deep, fertile soil that will grow good delphiniums, why not plant a group of a hundred or more? In all Flora's fair family there are none more stately, and what a range of color they present in every conceivable shade of blue! Perhaps your ground is poor and shallow; then take the yuccas, filimentosa, and flaccida, and plant these in bold, broad masses. In New Jersey, and doubtless elsewhere, there are by the country roadsides great groups of the tawny day lily, Hemerocallis fulva, apparently wild, and gorgeous they look with thousands of flowers open at one time on a July day. Does not this suggest a similar free use of the other species of Hemerocallis in our gardens, in association with tree and shrub in a wild, free way? Bocconia, Crambe, Ferula, Echinops, and Polygonum are names that, to those who know the plants that bear them, recall those of great size and striking character, too coarse perhaps for the choice collection. But given a place in the tree and shrub plantations they will give the garden another aspect of beautiful, hardy vegetation.

"As summer verges into autumn, other great groups continue the floral story of the year. In short, hardy flower culture presents so many aspects, provides us with material suitable to every kind of soil, condition, and environment, with flowers for spring, summer, and fall in unlimited variety, as to make utterly inexcusable the generally prevalent monotony of so-called flower gardening. Instead of universal imitativeness in the display of tender summer flowers, we want original, adaptive plantings of those that are hardy and permanent, and this we must do with the knowledge that no garden can do justice to them all."

ILLINOIS STATE ASSOCIATION

The prospect of securing a state appropriation for experiment work for floriculture under the direction of an advisory committee of the Illinois State Florists' Association has awakened great enthusiasm in that organization. At a meeting of the Chicago Florists' Club on March 9, thirty new names were added to the already long list of members of the state society. Application to incorporate has been filed. In the endeavor to secure favorable consideration by the state legislature, the committee in charge has been surprised at the lack of realization of the importance of the greenhouse industry in Illinois. For educational purposes it has issued the following open letter:

By an act approved March 2, 1887, the national government appropriated $15,000 per annum to each state for the purpose of establishing and maintaining an agricultural experiment station, "to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture and to promote scientific investigation and experiment respecting the principles and applications of agricultural science."

The Agricultural Experiment Station of Illinois was placed under the direction of the trustees of the State University as a part of the University. From 1887 to 1901 the station was maintained upon the United States fund of $15,000. Its sphere and its activities were necessarily limited because the above sum had to be used for salaries, printing four bulletins a year, as required by law, labor, supplies, etc. When divided among four or five departments representing great agricultural interests, such as agronomy, animal husbandry, horticulture, dairying, together with the necessary investigation in botany, entomology and chemistry relating to these industries, it is a matter of wonder that the stations have done the great work they have. According to the provisions of the law, none of the money can be used for buildings, as it was supposed the states would make the necessary appropriations for them.

Four years ago the various agricultural organizations of the state, realizing that the appropriations received from the national government were inadequate, sought and obtained appropriations. The past two years appropriations were made as follows: Twenty-five thousand dollars for livestock investigations, $25,000 for the soil survey of the state, $15,000 for dairy investigations, $10,000 for corn investigations, and $10,000 for orchard investigations. Each of these appropriations was expended under the direction of an advisory committee of five from each of following associations: The Illinois Livestock Breeders' Association, Illinois Farmers' Institute, Illinois Corn Growers' and Illinois Corn Breeders' Associations, Illinois Dairymen's Association and the Illinois State Horticultural Society.

The sums mentioned are specifically appropriated for certain investigations and have been so used. The only reason the florists have not had similar appropriations is because they have not asked for an appropriation for experimental work.

According to the census figures for 1900 there was invested in floriculture in Illinois the sum of $4,648,056. Of this amount $2,096,652 was represented by buildings and $2,439,163 in land. The wholesale value of the flowers and plants sold in 1899 was $1,867,855. There were 8,414,541 square feet of glass. In addition to the above figures, which relate to the commercial florists, or those who derive the principal part of their income from the sale of flowers and plants, we find 1,199 gardeners using a total area of 8,744,020 square feet in growing plants.

Greenhouse building firms estimate the amount of greenhouse building material, including structural work, glass and pipe and heating apparatus, at $2,000,000 per annum of sales in the city of Chicago alone. Information obtained by builders, through the trade press, from wholesale plantsmen, and estimates from leading members of the trade, make it certain that the value of investment and the amount of annual output are now 50 per cent greater than the above quoted figures for 1900. Conservative estimates place the coal consumption of the greenhouses of Illinois at 150,000 tons per annum.

In Cook County we find the glass area of the florists to be 5,855,612 square feet; in Du Page County, 532,680 square feet; Kane, 195,563; Sangamon, 184,240; McLean, 150,265; Will, 110,455; Morgan, 96,000; St. Clair, 95,330; Peoria, 86,509; Lake, 73,487, etc. With few exceptions there is in every county of the state some glass devoted to floriculture, and if we include the glass used in market gardening, the industry is practically universal, so far as the state is concerned. Indeed, no other state has so universal an interest in floriculture as Illinois. The industry is common to the whole state, and if we remember that a portion of the appropriation asked for should be used for experimentation on the home grounds of the state, the fact is established that floriculture is an interest that affects every person who possesses even a few feet of land. From the foregoing it will be seen that the results of investigations will be far reaching.

New York, the only state which equals or surpasses Illinois in commercial floriculture, has provided greenhouses at its two experiment stations at Geneva and Cornell. Many experiments have been carried on for the benefit of this industry, particularly with vegetables under glass. In Illinois, with her great floricultural interests, not a dollar has been specifically appropriated for experimental work along this particular line, while other agricultural interests have been cared for and florists have paid their part of the state taxes without any direct benefit in return.

In Rhode Island an asking has been made of the legislature for the sum of $15,000 for greenhouses. They will get it because the florists and gardeners are supporting it. In Illinois there are single establishments with a greater glass area than there was in the whole state of Rhode Island in the census year.

The state of New Hampshire has to-day perhaps the most compact and serviceable little range of glass of any state agricultural college and experiment station, costing $7,000 and built under a state appropriation. Compared with the floricultural industry in Illinois, New Hampshire has not as much glass as Du Page County, to say nothing of Cook County, which surpasses every state in glass area except New York, Pennsylvania, New Jersey and Massachusetts. Is $10,000 too great a sum for Illinois to put into glass structures?

The lines of work under glass which most likely will be taken up are methods of combating insect and fungous diseases and investigations in the use of commercial fertilizers. Whatever is undertaken will be determined by an advisory committee appointed or elected by the Illinois State Florists' Association, and this committee will certainly see to it that only such problems are investigated as are of the most vital interest to the whole state. The law contemplates a fund of $10,000 a year to pay all operating expenses, labor, coal, supplies, printing, etc., as well as co-operative experiments carried on away from the experiment station. If an insect or fungous pest appears on ornamental plants anywhere in the state which cannot be readily determined, an investigator should be put to work at it to the end that it may be brought under control for the common good of all the trade. Under the law for orchard investigations almost all the work has been carried on away from the university. No one knows at the present time what this co-operative work will be, but there will necessarily be some such work done, and the appropriation must cover all possible contingencies, especially since there can be no profit in maintaining a range of glass for experimental work, as the work will be largely with diseased plants.

The movement for appropriations is favored by the Illinois State Florists' Association, the Chicago Florists' Club, and many other prominent florists of the state, but every florist in the state should co-operate, and this can best be done by urging your representatives and senators to vote for the bill. Interview them when they are at home, if possible, otherwise write them a strong letter.

J. C. Vaughan, President Society of American Florists, Chicago.
James Hartshorne, President of the American Carnation Society, Joliet, Ill.

MALUS SCHEIDECKERI

By G. Frahm, Elmshorn, Germany.

Accompanied by a good photograph, Moller's *GartenZeitung* gives the following notes on this handsome forcing apple: A forcing shrub of first grade is M. Scheideckeri. With but average culture is can be brought into full flower by January and in such a profusion of bloom as to give the impression of an entire flower pyramid. As a dwarf it is particularly effective and salable.

The flowers are well filled and keep very long. Every one who has tried forcing this variety has spoken well of it.

French horticulture has acclimatized a new tropical tuber for Europe. The Paris correspondent of the *Newcastle Chronicle* states that it is one of the sweet potatoes of Western Africa, of which a complete mastery has been obtained in the experimental gardens at Bordeaux. Excellent accounts are given of the agricultural value of the new tuber, which, besides cropping well, can be profitably used in all its parts. Even the leaves are said to be no bad substitute for spinach. As for the tubers, besides their high nutritive qualities as a food highly relished by cattle, they contain 17 per cent. of sugar, which is higher than that of beet root, and also alcohol. — *Boston Transcript.*

Business Changes

S. H. Forshaw has started in the seed business at Pendleton, Ore.

The Swan Floral Co. of Findlay, O., has opened a branch store at Lima.

The Quaker Hill Nursery Co. has been incorporated at Newark, N. J. Capital $5,000.

Mrs. Sutherland has sold out her business on Bromfield Street, Boston, to S. Hoffman.

Duffey & Petterson succeed C. S. Battin in the greenhouse business at South Charlestown, O.

W. C. Pucket has opened at Fort Wayne, Ind., in the nursery trade. Address, R. R. No. 8.

Slinn & Hughes, wholesale florists, New York City, have dissolved partnership, Mr. Hughes retiring.

Mellor & Saunders have opened a tasteful retail flower store at 30 Prescott Street, Lowell, Mass.

William H. Maher, Newport, R.I., has lately installed a new Scollay boiler, replacing one that has been in use for twenty-nine years.

C. A. and L. A. Royce have bought the Randall place, Palmer, Mass., and will erect a range of greenhouses on the property.

William Butcher, one of the oldest established florists in Providence has sold his place and will retire to a life of gentlemanly leisure.

John A. Scollay, Brooklyn, N. Y., has just completed some new lines of boilers and the firm is now making six styles and about seventy sizes.

The creditors of W. L. Rementer, florist, Lansdowne, Pa., have petitioned to have him adjudged bankrupt. He disappeared nearly two weeks ago and has not returned. Among the larger creditors are the H. F. Michell Company, Keller Pottery Company and George C. Watson. Rementer has been Chief of Police of Lansdowne for several years.

LIST OF PATENTS

Issued March 7, 1905.

784,029. Fruit-Slicer. William H. Boutell, Rochester, N. Y., assignor to Boutell Manufacturing Co., Rochester, N. Y.
784,346. Method of Cultivating Plants by Electricity. Eugene Pilsoudsky and Eugene Ragozine, St. Petersburg, Russia.
784,396. Lawn-Mower. John H. Hall, Patrick, W. Va.
784,458. Trench-Cutter. Leonard C. Wemple, Chicago, Ill.
784,527. Process of Peeling Fruit. Charles J. Vernon, Fresno, Cal.

Agents for HORTICULTURE are wanted in every community. Liberal commissions to active workers. Write for information.

NEW TRANSPLANTING TRUCK

Invented by Peter Bisset,
Washington, D. C.

This is an entirely new departure in the line of transplanting trucks, as the illustrations will show. It has a flat bed, having one end tapered to an edge, ante-friction rollers having their journals on the bed below the upper surface thereof, a pair of wheels on which the truck is supported intermediate its ends, permitting the truck to be tilted so that the uppermost plane of the bed may meet the ground, and a windlass mounted at that end of the bed opposite the tapered end and in close proximity to the surface of the bed, effecting a pull in a direction approximately parallel to the upper plane of the bed, a band adapted to pass around the ball of the plant to be transplanted, and winding connections between the ends of the band and the windlass.

Method of Loading and Unloading a Tree

This truck has now been in operation for almost a year, and has proved in every way satisfactory in transplanting trees, for moving large palms in tubs, tree stumps, and heavy stones; in fact it can be used to move anything that is too heavy or too large for men to carry; doing the work better, quicker, and with less men than by any of the older methods.

In transplanting, the tree is dug around in the usual way, and the ball undermined as much as possible, then the side of the trench is cut away the width of the truck so as to form a runway for the truck to get under the ball. The tapered end of the truck is then placed under the ball, and the belt that encircles the ball put in place. This belt is then attached to a chain from the windlass, and the whole is then wound up on the truck. As soon as the tree is pulled far enough up, the truck is balanced by the ball resting over the wheels, and then assumes a level position, when it can be pulled out and transported to the hole already prepared for the reception of the tree. To unload, the operation is just reversed, and the tree is allowed to slide slowly into its place.

With this truck a tree can be moved without fear of loss, if ordinary care is used to see that a proper proportion of roots are saved. The inventor has some very valuable trees that were moved on this truck last spring, that came through the past summer so successfully that no one could tell that they had been recently moved. They were moved with such good balls that no pruning or shortening of the branches was required. The truck can be made of various sizes to answer all purposes, from moving small shrubs up to large trees. In the larger sizes, four wheels are used instead of two, as in the one illustrated. With this machine a tree is moved in an upright position, and is moved and planted without breaking the ball, and with such ease that few men are required, the work being done so rapidly that the roots that are exposed have little chance to dry up.

Large Palm in Transportation

The invention is fully covered by patent rights.

Gold Medal Winner

At St. Louis

Did You See Exhibited at St. Louis the
NEW CRIMSON RED CANNA

MRS. WM. F. KASTING?

Height, 3 1-2 feet. Most brilliant in color, most prolific of all Red Cannas. Blooms all the time, and is exceptionally fine for conservatory decorations. You will need it in your business. **Awarded on its merits, a Gold Medal at the World's Fair, 1904**

PRICES for bulbs, ready for delivery now: $1.00 each, $9.00 per doz. $50.00 per hundred. Stock limited.

THE BEST WHITE CARNATION IS

Lieut. Peary (WARD)

CERTIFICATED 90 POINTS

PEDIGREE—White seedlings for several generations. **COLOR**—Snow white. **FRAGRANCE**—Very strong clove, decidedly fresh, and pleasing. **SIZE**—Large, averaging 3 inches in diameter on strong stiff stems, 18 to 20 inches in length. **FLOWER**—Full, broad petaled and high center and of a fine symmetrical form. **CALYX**—Long, strong and does not burst. Fine keeper and excellent shipper. **HABIT**—Strong and erect. **GRASS**—Medium width. **CONSTITUTION**—Very vigorous and free from disease. Cuttings root rapidly and will be sent out in the most perfect condition. Commences blooming October 15th and flowers continuously throughout the winter, affording an abundant crop. A first class commercial variety in every respect. NOW BOOKING ORDERS.

PRICE, $12.00 per 100; $100.00 per 1000.

Florists' Supplies and Letters

34 Hawley St. - BOSTON

CUT-FLOWER MARKET REPORTS

BOSTON The current week sees a stronge rmarket, but without any material change in values. High grade material finds a market, as a rule, and whatever stock remains unsold belongs in the refuse class. This condition is very gratifying, considering the outlook as it appeared one week ago.

BUFFALO Market has been glutted since the opening of Lent. All kinds of flowers are moving slowly and are sold at very low prices. Lilies and other bulbous stock are a burden, also carnations and violets. All social events are at a stand still, hence the above conditions.

CHICAGO No change from the depressed condition in the cut-flower market. Demand very light, and the street venders have had a better opportunity to pound values. Select Beauties are the scarce item, but the cull grades of this stock continue in number beyond trade requirements. Wieland & Risch are the first to come in with the new crop, which is of extra fine quality. Carnations are the weak spot of the trade, almost unsalable. Lady Bountiful is the best seller. White Lawson and Gov. Wolcott are close seconds, and Mrs. Lawson continues as the most popular pink. Violets are in over supply. Princess of Wales and single California are the favorites with local buyers.

There have been sharp fluctuations in bulbous stock occasioned by the enormous supply. Harrisii lilies of good quality are scarce. Only a small proportion of the total receipts are first grade. Callas are a glut; the lily of the valley market is affected similarly. Orchids, especially catteleyas, are difficult to get. White violets and gardenias are in fair supply.

CINCINNATI With plenty of flowers now coming in, and business a little on the quiet side, the wholesale houses find much trouble to clean out their stock at anywhere near a fair figure. Very little else can be said about the conditions of trade, as there is more stock than demand.

LOUISVILLE Business conditions last week were very favorable, there being a great demand for good stock. Carnations, violets, and roses are good in quality, and the demand and supply are excellent. The sale of bulbous stock, lily of the valley, etc., is very satisfactory.

PHILADELPHIA. Market the past week very draggy owing to Lent and other causes. Monday was about the only good day. Stocks were of good quality all along the line. Beautvs were a llttle more plentiful with demand light. Carnations hung fire and dropped in price 25 to 50 per cent. Violets have been going better on account of the good weather, but prices are still very, very low. Gardenias plentiful and good, and went fairly well. Lily of the valley and other miscellaneous stock were in good supply and demand normal.

PITTSBURG We have had a week of dull business. Social entertainments are practically suspended, and few demands exist except for occasions of mourning and solemnity. Last week the supply of roses was excessive (with the exception of fancy stock) and towards the end of the week they could be moved off only by liberal concessions in selling figures. The same may be said of bulbous stock which is overabundant. Carnations are plentiful, and they move fairly well, especially good whites and scarlets. Violets are dull, though the fashion amon gst the women of wearing great corsage bunches is revived. Lilies are showing themselves in great quantities and fine quality. Pot plants are coming in in good quantities and all that is wanted is a few fair days to stir up the plant buyers.

CHICAGO TRADE TIPS

Tulip Vermillion Brilliant, the leader in its color for many years, has a tendency to come black-tipped with some growers.

Belle of Lyons is the queen of reds. It can be had as early as Proserpine. This variety commands the best price in its color.

Yellow Prince was superior to King of the yellows this season, being an easy doer. It should come slowly; do not overforce this sort.

A tip on tulip forcing will not be amiss here. You cannot expect good blooms from stock grown under the benches. The successful specialists here give their stock the best place in their establishment, and after March 1 stop forcing altogether, allowing the crops to come on natural. Such as they wish to come later in the season are stored in cool cellar rooms. The best Easter tulip will be those stored this way.

R. H. Warder, a large, light pink gladiolus, and gladiolus Princeps, a rich crimson, were the novelties in this market last summer. The spikes brought 5 cents as the top price last year.

How to grow high-grade Narcissi will be my next tip.

NOVELTIES IN CHICAGO

White violets and gardenias are handled exclusively by McKellar. Long-stemmed Liberty roses is Wieland and Risch's long suit. Bassett & Washburn offer Rose. La Detroit. Chicago's popular red carnation "Chicago" is best grown by Wietor Bros. Lady Bountiful and Cardinal are the head liners of Chicago Carnation Co., at the flower-growers' market. Shasta daisies can be found at Winterson's; lilac plants, white and purple, at Stollery Bros; and the novelty for this week, True Shamrock, at Deamud's.

Agents for HORTICULTURE are wanted in every community. Liberal commissions to active workers. Write for information.

WOODCUTS and HALF-TONES of artistic floral designs, funeral, presentation, etc.

Needed by every retail florist as examples from which to take orders for design work.

CHEAP

Address N. Care HORTICULTURE
11 Hamilton Place, Boston

FOR SALE or LEASE

AN EXCEPTIONAL BARGAIN for the right party; greenhouse with 8000 sq. ft. of glass. Hot water heating plant with practically new boilers, 2½ acres of good land, in fine location, well established business in full operation.

Apply to ANNA W. KIDDER
Waltham, Mass.

FOR SALE—7-room house, 16,000 ft. of land and greenhouse near center of city of 30,000 inhabitants. Grand chance for gardener. Grow ferns, palms and bedding stuff for retail trade. Plenty of jobbing. Or could increase glass for wholesale growing. Fifteen minutes to Boston. Nine-cent fare. Five hundred dollars down; balance, easy payments, will make easier terms if right parties.

Inquire H. H., Care HORTICULTURE,
11 Hamilton Place, Boston.

SITUATION WANTED—As a gardener on private place by Englishman to grow a general line of stock. Good reference. Four years in present place. Massachusetts preferred. Refer to F. S. Moseley, Box 5234, Boston; Mass. Address F. G., care of F. S. MOSELEY, Newburyport, Mass.

SITUATION WANTED—As foreman on good-sized place where rose growing for cut flowers is made a specialty. Refer to Alex. Montgomery, Waban Conservatories, Natick, Mass. Address GROWER, care of HORTICULTURE, 11 Hamilton Place, Boston.

SITUATION WANTED—As Gardener to have charge of estate. Long experience in all departments, in fruit and plant growing all kinds; care of lawns, trees, shrubs etc.—for reference apply to Mr. W. J. Stewart, editor of this paper.

W. S., Care HORTICULTURE,
11 Hamilton Pl., Boston.

WANTED—By March 1st. Assistant Gardener for private place near Lenox; one who thoroughly understands Roses, Grapes, Orchids, etc. Wages $30.00 a month and board. Address stating age, experience, references, etc.

Care T. I. GREY, 32 So. Market St., Boston

WANTED—At once, two good men, must understand watering and potting of palms, ferns and bedding plants. Steady positions for the right men. State age, experience and wages wanted. V. LEUTHY & CO., Perkins Street, Roslindale, Boston, Mass.

WANTED—A young man to take care of Orchids; must be thoroughly competent, of good habits, and interested in his work. One with an English training preferred. Send references to

Wyndhurst Gardens, Lenox, Mass.

CATALOGUES RECEIVED

Blue Hill Nurseries, Julius Heurlin, South Braintree, Mass. List of specialties in herbaceous plants and coniferæ. Illustrations and press-work excellent. A superb collection offered by an expert and enthusiast.

Thadeus N. Yates & Co., Mount Airy, Philadelphia. Spring trade list of deciduous and evergreen trees, shrubs, vines, etc. A condensed list of good things offered in quantity.

Morrisville Nursery, S. C. Moon, Morrisville, Pa. A beautiful catalogue of the choicest garden ornaments. Berberis Thunbergii in colors appropriately adorns the title-page, and the illustrations throughout are gems.

Holton & Hunkel, Milwaukee, Wis., have distributed a unique calendar beautifully decorated with several species of daisies, on metal. It is a work of art. We have received one and wouldn't part with it for anything.

CLEMATIS MONTANA GRANDIFLORA

Clematis Montana Grandiflora

A variety of Clematis which, when better known, is destined to become as popular as Clematis Paniculata, its main value being in the fact that it flowers in advance of all other hardy climbers, frequently beginning to expand its flowers as early as the last week in April, continuing well through May. These flowers are from 1 1-2 to 2 inches in diameter and of a pure white color, and are produced in such masses as to completely hide the plant, which is of remarkably strong vigorous growth and insect and disease proof.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds. Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition. They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅜- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

Exterior view of "U" Bar greenhouses designed and erected for Mrs. O. Thorne, Millbrook, N. Y.

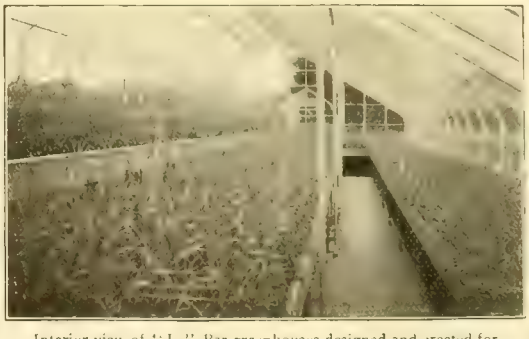
We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water



have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

NATICK, MASSACHUSETTS

Select List of Hybrid Perpetual and other ROSES

FOR OUTDOOR PLANTING

The Roses which we here offer are field grown stock either American grown or plants that have been imported from England and Ireland. We handle no Holland grown Roses.

These plants were all potted up into 5- and 6-inch pots, according to the growth of the variety, during December and January, stored in cold houses so that they break away naturally, making this the best possible stock for selling to the retail customer.

Roses with Long Canes

We can supply Marechal Neil, Cloire de Dijon and Crimson Rambler in 7-inch pot-grown plants with canes about 8 feet long at $1.25 each.

NEWER VARIETIES OF ROSES

FOR OUT-DOOR PLANTING

FRAU KARL DRUSCHKI

New White Hybrid Perpetual Rose

This new hardy Rose is of German origin, and was first disseminated in 1900, and has since won many prizes and made many friends. It is the IDEAL HARDY WHITE ROSE. Its flowers, which are very large, are perfect in form and snow-white in color, with large shell-shaped petals, forming a beautiful flower. The plant is a strong, vigorous, healthy grower.

Strong two-year-old plants, $3.50 per doz.; $25.00 per 100.

NEW RAMBLER. PHILADELPHIA

A cross between Crimson Rambler and the Hybrid Perpetual Victor Hugo, it differs from the old variety in being of a much deeper, brighter and more intense color which never fades out, perfectly double to the centre. It will not only prove a valuable addition to our hardy climbing Roses, but for forcing purposes for Easter we feel certain that it will entirely displace the Crimson Rambler.

Strong two-year-old plants, $3.00 per doz.; $25.00 per 100.

PAUL'S NEW SINGLE CLIMBING ROSE

Waltham Rambler

An unique and charming single flowering Climbing Rose with extra large clusters of deep pink flowers, with lighter centre and golden anthers as dainty and pretty as can be; it is of English origin, and has attracted much attention during the past two seasons at the various exhibitions at which it was shown. The plant is of strong vigorous habit, absolutely hardy, and a most excellent variety to plant wherever a strong climber is desired; the pretty single flowers produce a pleasing and brilliant effect entirely distinct from all other types.

Extra strong two-year-old plants, 50 cents each; $5.00 per doz.

NEW HYBRID TEA ROSE, IDEAL

A "sport" from the favorite La France, which it closely resembles in every way except color, which is a bright deep pink that does not become "washed out" even under the most unfavorable conditions. The plant is a strong, vigorous grower, very free-flowering, flowers of good size and deliciously scented, and we believe it will become even more popular than its famous parent both as a forcing variety under glass as well as for the open ground. An ideal rose in every respect.

5-in. pots, 30 cents each; $3.00 per dozen.

GRUSS AN TEPLITZ

The Famous Crimson-Scarlet Bedding-Rose

Introduced some five years ago, this reddest of all red roses has grown more in popular favor each year, and to-day is probably the most valuable high-colored, hardy everblooming rose we have. In color it is of the richest scarlet, shading to a velvety crimson as the flowers mature; of good size, very fragrant, a free grower, and most profuse bloomer, it being phenomenal in this respect. We offer strong plants.

4-inch pots, $2 00 per doz.; $15.00 per hundred.
5-inch pots, $2.50 per dozen; $20.00 per hundred.
4-inch pots, $2.00 per dozen; $25.00 per 100..

Henry A. Dreer, 714 Chestnut St., Philadelphia, Pa.

HAVE YOU KEPT YOUR EYE

ON

LA DETROIT

The GRAND NEW PINK ROSE
we disseminated Last Season?

WHAT IT DOES FOR US

It grows stronger and more vigorous than any Rose we ever grew.

It produces more high-grade and long-stem blooms than any Rose we ever grew.

It produces as many flowers as Bridesmaids planted in same house, same date, same quality of stock.

It is doing well with nearly every one that planted it last season.

It is in a class by itself and has COME TO STAY.

HARDY HYBRID PERPETUAL ROSES

English-grown Stock, low budded on Manetti, now ready for delivery. Strong two-year-old plants

EACH $.35; DOZ. $3.50; 100 $25.00

ALFRED COLOMB. Brilliant carmine-crimson, large.
BARON DE BONSTETTEN. Velvety blackish crimson.
BARONESS ROTHSCHILD. Pale flesh pink; very fine.
BEAUTY OF WALTHAM. Bright light red.
BOULE DE NEIGE. Pure white; free-blooming, strong, vigorous habit.
CAPT. HAYWARD. Bright crimson.
CHARLES LEFEBVRE. Bright velvety scarlet.
CLIO. Flesh color, shaded in the centre with rosy pink.
DUKE OF EDINBURGH. Vermilion.
DUPUY JAMAIN. Very bright cerise.
EARL DUFFERIN. Velvety crimson, shaded maroon.
FISHER HOLMES. Rich velvety crimson.
FRANÇOIS MICHELON. Deep rose.
GENERAL JACQUEMINOT. Brilliant scarlet-crimson.
GLOIRE LYONNAISE. Fine chrome yellow.
JEANNIE DICKSON. Rosy pink.
JOHN HOPPER. Brilliant rosy-crimson.
JULES MARGOTTIN. Bright cherry.
LA FRANCE. Bright lilac-rose, centre silvery white.
LOUIS VAN HOUTTE. Deep red, shaded with maroon.
MABEL MORRISON. White, faintly flushed with pink.
MADAME GABRIEL LUIZET. Fine satiny rose.
MAGNA CHARTA. Bright pink suffused with carmine.
MARCHIONESS OF LONDONDERRY. Ivory white.
MARGARET DICKSON. White, pale flesh centre, exquisite form; petals large and of good substance.
MARIE BAUMANN. Rich carmine-crimson.
MERVEILLE DE LYON. White, with delicate blush shade in the centre; very large and full, perfect form.
MRS. JOHN LAING. Beautiful soft pink; large, full, and fine shaped, with a most delightful fragrance.
MRS. R. G. S. CRAWFORD. Rich, clear rose pink.
MONSIEUR BONCENNE. Velvety dark crimson.
PAUL NEYRON. Deep rose; very large.
PRIDE OF WALTHAM. Delicate flesh color.
PRINCE CAMILLE DE ROHAN. Velvety crimson.
SENATEUR VAISSE. Dazzling red.
SIR ROWLAND HILL. Port-wine color.
ULRICH BRUNNER. Cerise red, large, full, globular flower; one of the best red sorts.
VICTOR VERDIER. Deep rose; centre bright rose.
XAVIER OLIBO. Velvety black, shaded with amaranth.

The Modern Wars of the Roses

The meeting of the rose-growers in the New England metropolis is peculiarly appropriate to that home of the ancient Puritans. Although the stern forefathers looked upon flowers as savoring of the "vanities of this earth," yet they had some affection for this especial flower as being the emblem of England, of their trans-Atlantic home.

I have but recently told, in these columns, the stories and legends connected with many different flowers; it may, however, be permissible to repeat that the old legends say that red roses sprang from the firebrands piled around a virgin martyr in Bethlehem, and white roses from the unkindled brands around the same unfortunate young lady.

The rose was often used as a public-house sign in England, — the red rose because it was the badge of Edmund, first earl of Lancaster; the white rose because it was the heraldic badge of the house of York. Heraldic language would say that the "*Rose gules*" was the emblem of the house of Lancaster, and the "*Rose argent*" of the house of York; hence these roses were the chief badges during the terrible "Wars of the Roses," which lasted thirty years (1455–1485) and cost over 100,000 lives.

The rose has ever been the emblem of secrecy, so that if any of the rose-growers should paint the city of Boston a Liberty or Richmond color, they may be sure that their fellow-delegates (*sub rosa*) will never carry the news of it to their native towns.

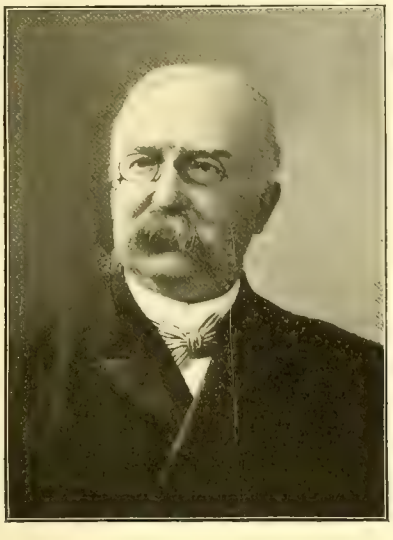
As a poetic symbol the rose has been constantly in the mouths or on the pens of the poets. Shakespeare has stated that "the rose by any other name would smell as sweet," but any other name might spoil the metre of many a poem. Richard Allison once wrote —

> "There is a garden in her face,
> Where roses and white lilies grow."

In this case we may hope that the top-dressing was nothing stronger than face powder.

Scott has stated that

> "The rose is fairest when 'tis budding new,
> And hope is brightest when it dawns from fears.
> The rose is sweetest washed with morning dew,
> And Love is loveliest when embalmed in tears."



Wordsworth also vaunts "the budding rose above the rose full-blown." Were a chorus requisite for the convention, the thoughts at once fly to "The Last Rose of Summer." Should any competitor be dissatisfied with the awards, he can sing the old song by Thomas Haynes Bailey, —

> "The rose that all are prais
> ing,
> Is not the rose for me."

Should any exhibitor find his flowers too fully blown, he might wish with Keats that "the rose should shut and be a bud again."

When it comes to music that has been set about the rose, the list is so great that we do not attempt to give it. It may, however, be of interest to know that the poem which has been set to music more frequently than any other (in any language) is Heine's German one, in which he compares his lady-love to a flower. This has been set to music in more than *five hundred* different ways. Its words run, —

> "A tender, budding flower,
> So pure and fair thou art.
> I gaze on thee and sorrow
> Is stealing in my heart.
>
> "My hands I clasp above thee
> And breathe a fervent prayer,
> That God may ever keep thee
> So pure, and good, and fair."

LOUIS C. ELSON

Louis C. Elson, professor of theory of music at the New England Conservatory, is one of the bright professional and literary lights of Boston. His genial personality endears him to all who meet him and whatever comes from his pen is always interesting. His partiality to the society of the florists is only equaled by his fondness for the flowers. HORTICULTURE is highly honored in the privilege of counting Prof. Elson among its staunch friends.

Louis C Elson

Hardy Blood in Rose Hybridization

At the present time, when so many are interested in rose hybridization and so many new varieties are being sent out, I think it would be well for the hybridizers to take more into consideration the hardiness of the plant than they have done heretofore. They are too prone to work into Tea blood in preference to hybrid perpetual or the hardier roses, and it cannot fail to be a great detriment to the sale of those plants hereafter to have so much tender blood. It is a good deal like the fine Indian blood in the choice rhododendrons; where you get a finer flower you are losing in the hardiness of the plant, and when people come to buy such they are doomed to disappointment. I have hybridized a great many roses myself and I know for a certainty that the nearer you get to Tea blood in them, the more you detract from the hardiness, and if we are to encourage rose-growing among the people, we want to give them as hardy roses as we can to stand this northern climate. Those fine Tea bloods are grand in the South, but many of them succumb to our Northern winters and thereby bring disappointment and loss to many people who are looking to see them in the garden as they would see them in the greenhouse, or in a more temperate climate.

I think, also, that we should turn our attention more than we have done to hybridizing on Rosa rugosa. This rose has such a splendid constitution that there is no reason why we should not get a progeny more hardy even than the ordinary hybrid perpetual rose, of which but very few can be called perfectly hardy; they all have to be covered more or less in cold weather. I have been working a good deal in this direction and I think that I have several new varieties which unfortunately I have not been able to get ready for this rose show, but which I consider will astonish somewhat, in the way of single and double Rugosa, Wichuraiana, and Multiflora. The hybrid rose that I have called Lady Duncan is considered by all who have seen it one of the finest single roses for covering embankments. This is a cross between Rugosa and Wichuraiana, of trailing habit, and will grow 8 or 10 feet in a season. The flowers are a beautiful salmon rose. Nothing can be hardier; it stands in the most exposed places. It is much harder to propagate than some others, and that is the reason it has not been on the market.

Another which is a hybrid of Crimson Rambler and Wichuraiana, has single flowers of great brilliancy. It seems to be perfectly hardy and has stood recent winters without any covering whatever, which is a pretty good test.

I am still at work on these roses, crossing them with various hybrids and with some of our old-fashioned Scotch roses and yellow Harrison, and am very hopeful as regards ultimate results.

Jackson Dawson

Adiantum Farleyense

In a span-roofed house recently erected for Mr. R. L. Beekman by Hitchings, Mr. John Urquhart, the gardener, has succeeded in an almost incredibly short time in making a showing of Adiantum Farleyense that is exceedingly creditable. The methods adopted by Mr. Urquhart in growing this most graceful of all ferns differ considerably from those of most other growers. He does not believe in a too minute division of the crowns when starting to get up stock, because he thinks that very small crowns require a longer time in the case wherein he places them before they are sufficiently established to be repotted, and that a prolonged forcing process has a weakening effect, which becomes almost constitutional in the plant and very hard to get rid of.

On the other hand, Mr. Urquhart divides only to the extent of leaving sufficient crown to find snug quarters in a thumb pot, and when all are thus potted, he places them in an enclosed glass case, plunging the pots in spagnum moss, which retains much moisture, necessitating less water for the little plants. In every stage of growth Adiantum Farleyense loves moisture, but detests an inordinate amount of liquid nourishment during its nursery days.

The plants we have had under observation have been sparingly watered and air gradually admitted as they showed signs of growth, until when a few fronds had formed, ventilation was freely given, causing a hardier growth and making the plants sufficiently robust to be placed on the bench when repotted. Even then, whenever possible, Mr. Urquhart puts air on the house, in order to get harder and stiffer fronds than would be possible with a high temperature and much humidity, and for the same reason he shades the glass but very little. Consequently he has in this house now a splendid lot of thrifty-looking plants in four-, five-, and six-inch pots, being expressly fitted for the purposes for which they will be utilized — namely the fronds for cutting and the smaller and medium-sized plants for dinner-table decoration and for filling the dainty fern dishes so much in vogue now. When A. Farleyense is grown in not too hot a temperature and but slightly shaded, it compares favorably with A. cuneatum in endurance, besides immeasurably excelling it in luxuriance and gracefulness.

David McIntosh.

Luculia gratissima

The photographs herewith reproduced, illustrating this beautiful plant, having only recently come to our hands, we are glad to reproduce in connection therewith the brief cultural notes by George McWilliam, which appeared in one of our previous issues. There is no question as to the desirability of this old but little-known plant as a commercial plant for the holidays. Mr. McWilliam says:

"This beautiful flowering plant is one of the most useful subjects we have at the Christmas holidays. Their color and fragrance make them in much demand for house decoration. Under artificial light they show at their best. Their culture is as follows: When the plants are through flowering they are pruned hard back and the prunings used for cuttings, after which the plants are then stood in a cool, light place and syringed daily until about the first of June, when they are planted out-of-doors. Land well-manured for vegetables is a good place to plant them in. The cuttings will have been rooted and in small pots ready to plant out with the old plants. If they grow well, they need pinching about twice.

"The plants should be lifted about the last of August or the first of September, and potted in rather small pots. Soil mixed for carnations with a little sand added suits them well. After potting they should be kept in a moist close frame or house and given water freely. With a light shading for a few days they soon take root in the new soil, after which

they are hardened off gradually to about 50 degrees at night. When the flower buds are set, the temperature is raised 5 or 10 degrees at night. The pots are well filled with roots by this time, and then they should get weak liquid manure at each watering until

the flowers expand. The plants should be put in a cool greenhouse a few days before using for dwelling-house decoration, using water freely. When in the dwelling-house, they require frequent and copious waterings.

"The general effect of the plant in bloom is that of a rich pink hydrangea, but the individual flowers are longer tubed, much more graceful, and the fragrance is rivalled by but few flowers."

Geo McWilliam

Daphne indica

In this subject we have a plant that some growers think has a great future. Grown in quantity, it should command a ready market everywhere, for there is no flower can compare with it for fragrance. But the old way of growing it in pots is out of date. It should be planted out in good soil on an inside border or bed, as Mr. McWilliam has it at Whitinsville, Mass., where three plants in bush form, planted in the south end of a carnation bed, measure five feet in height by six feet in breadth, and produce from October to March some thousands of trusses each year. Many of the spikes are from a foot to eighteen inches in length, with plenty of fine green foliage, which greatly enhances their beauty in a vase. These plants are eighteen years planted, so it would take some years to get them to flower in quantity. The temperature is never over 50 degrees with fire heat.

W. Swan.

British Horticulture

A Traveler's Achievements

It is due to the generous enterprise of Messrs. Veitch & Sons that many of the horticultural treasures of the Eastern World have been introduced to this country. Thier nurseries at Coombe Wood, near Norbiton, are well stocked with trees and shrubs, which have been brought from different parts of Asia by Mr. John Gould Veitch, Mr. J. H. Veitch, Mr. Mories, and other collectors. In recent years valuable service has been rendered in the work of exploration by Mr. E. H. Wilson, a painstaking and intrepid traveller, who is now returning to this country. Since 1899, with one or two intervals, he has made a thorough exploration of China, having received his preliminary training from Professor Sargent of Boston, U. S. A., and from Dr. Henry, formerly in the service of the Chinese Customs. His last important trip was from Kiating, and although having to face the hardships of a severe winter, Mr. Wilson was able to carry out the chief object of his search, viz., the securing of Dipelta floribunda. A warm welcome awaits Mr. Wilson amongst horticulturists, who fully appreciate his notable achievements.

A Leading Lily Grower

Last week I was able to visit at Putney the nursery of Mr. William Iceton, who for many years has grown lilies for Covent Garden market and the London florist shops. Mr. Iceton, by the employment of the retarding process, is able to cut lilies of the valley all the year round. The crowns are imported from Berlin, Hanover, and Hamburg in October, November, and December. Nearly three parts of the crowns are put in a refrigerator and the remainder are "laid in" in the open ground until required. The retarded crowns are largely used after May, and it takes about three weeks or a month to secure the bloom after the boxes have been placed in the houses. There is a good demand for the bloom, but in recent years a larger number of growers have engaged in the business, and competition is somewhat keen. The prices now obtained vary from 9 *s.* to 18 *s.* a dozen bunches at Covent Garden. Mr. Iceton also makes a specialty of Liliums. Most of the bulbs are exported from Japan. Last year there was a shortage of bulbs owing to the war between Russia and Japan, but this year they are coming more freely. At this nursery, as at others in the neighborhood of London, serious damage was caused to the longiflorums and other plants owing to the severe fogs in December. This is one of the greatest trials of the nurseryman in the suburbs. Their proximity to the chief London market enables them to send all their consignments by road, but they have to pay the penalty of this nearness by the heavy fogs which make the London winters burdensome.

Profitable Mushroom Culture

Mr. R. E. Addey, a leading mushroom grower and spawn maker of Brentford, has lately shown at his stand at Covent Garden Market a remarkable novelty. One goodsized and perfectly shaped mushroom was grown, on the top of which were four smaller specimens. This is a unique freak of nature in Mr. Addey's twenty-five years' experience. He is one of the largest growers in England, having a continuous supply for market all the year round. Some time ago I learned from Mr. Addey some interesting details of his extensive business. The virgin track spawn manufactured by him is exported to America, and other parts of the globe. On one occasion, he informed me, a consignment of mushrooms were sent by him to New York. They were placed in the cold storage of the steamer at Southampton and arrived in America in first-class condition, realising 4*s.* a pound. This profitable crop is grown both indoors and out. Flat-framed beds are utilized outdoors. These are 200 feet long and 15 feet wide. Substantial planks keep the beds in shape, and these are continued about eight or ten inches above the soil surface of the bed. A light frame work is formed for the support of the galvanized iron sheets used for covering. Litter is placed over these sheets to secure equable conditions.

Some Essentials for Success

Mr. Addey considers the chief thing necessary for success is good, fresh straw manure. The manure should be properly turned, and, if too dry, moisture added at the first time of turning. For ridges he prefers one 2 feet, 9 inches at the bottom, 2 feet, 6 inches in height, and 6 inches across the top. As a casing Mr. Addey uses a friable loam in which there is not a particle of manure. The proper thickness of casing for a conical bed is 1½ inches, making it a little thicker at the bottom, and not more than an inch for a flat bed. The surface should be firm, but at the same time porous. Twelve inches of manure are placed on the flat beds at the coldest time of the year, and eight inches in the spring and early autumn. The pieces of spawn are placed in the ridge beds about six inches apart. In the flat beds the pieces — a spawn brick being divided into six sections — are inserted edge-downwards. About six weeks after spawning and landing Mr. Addey secures a good crop. As to the commercial side, he stated, "The average price of mushrooms ranges from 8*d.* to 1*s.* a pound, according to the time of year. Many years ago we used to very frequently make from 1*s.* to 1*s.* 6*d.* per pound. If the prices are lower than formerly there are greater demands and a more ready sale."

W. H. Adsett.

London, England, March 1, 1905.

The Hot-bed

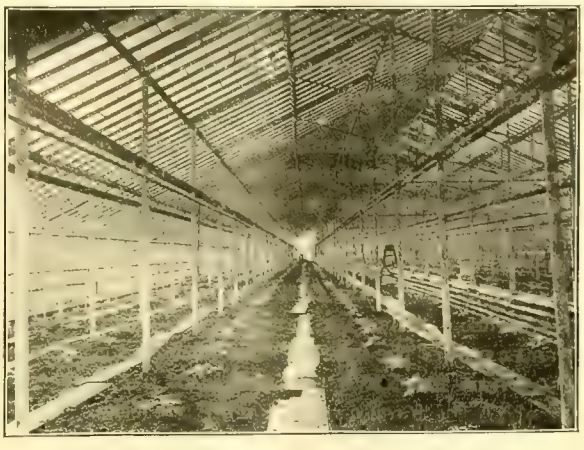
At this time of year the greenhouses are full to overflowing with growing plants for the Easter trade, so that it is often a serious question how to accommodate the stock. But for this difficulty the hot-bed is a remedy. And not only is the hot-bed suitable as storage quarters for growing stock, but it is a fine place to start the various flower seeds and to harden off plants. Side crops of lettuce, radishes, parsley, herbs, strawberries, or mushrooms can be raised there.

The construction of the hot-bed is simple enough. The frame consists of boards stood on edge, and nailed together to form a rectangular structure. The rear boards should be sufficiently tall to give a slope of four inches, with the front ones high enough to give head-room for the plants. Six feet is the ordinary width of the bed, the length varying with one's needs. This frame is covered with sash, and it is well to provide shutters or mats for additional protection during cold, windy, or stormy periods. This outfit should last several years.

The best situation for the hot-bed is to the south, or southeast. If placed on a hillside, or where there is a fence, hedge, or building to the north, more heat will be available.

The heat is supplied by fermenting horse manure, and as warmth must be furnished for over two months, economy will not pay in the amount of manure absolutely necessary. As much fresh horse droppings is collected at the same time as will be required, and the long straw retained. This is piled up under cover, and turned every day for ten days or two weeks, moistened if necessary during that time. It is then ready for the beds. If forest leaves are added they will prolong the fermenting period, hence are rather essential to beds made early.

The space enclosed by the frame is excavated to a depth of 3½ to 4 feet, the earth being used to bank around it. Then the prepared material is put in, layer by layer, and tramped down, until the whole is level and solid to within six inches of the top. Some people extend the excavation a foot beyond the frames, and set these directly on top of the manure. By this method the space between the glass and bed remains constant when the latter settles. A more substantial frame is made with a foundation of brick built in a permanent position. Such a frame may be emptied during the summer, and used for a storage house.



The temperature will run away up for a few days, but will soon sink to 75 degrees. Then a layer of good garden soil, put on six inches in depth, will finish the bed, bringing it to the surface of the ground. The seeds may be sown now, or plants set out, choosing bright, sunny days for this work, and having as little sash off as possible at one time

The future care is simple. Always have a chink of air on, even in the coldest weather, in order to let off the "sweat." Give ventilation the same as in greenhouses, and water when necessary late in the morning, on warm, clear days.

To many people this may appear like a makeshift, but on many large estates gardeners are obliged to furnish fruits and vegetables out of season, besides a succession of flowers all the year round, having no other means at hand than these minature greenhouses.

R. L. Adams.

An Immense Cucumber House

Herewith an interior view of one of the most remarkable vegetable-forcing houses in the country. This is 375 feet long and 80 feet wide. It was designed and built by G. M. Kendall of Leominster, Mass., and is used mainly for growing cucumbers. The picture shows a crop of cucumbers about two weeks after planting. The plants are forced rapidly by using a high temperature and plenty of available plant food. Mr. Kendall is a pioneer in the business of growing cucumbers.

The Editor Has His Say

Welcome! American Rose Society.

Respect for old age should cease at the door of the rose storage vault.

The outlook for genuine advancement of the rose for this country from the basis on which the French rosarians are working is decidedly dreary. So rare is it, indeed, that we find anything worthy among the entire year's output of novelties that it seems a reasonable conclusion that for practical purposes in this country, either for forcing or for garden use, the greater part of the foreign introductions are valueless. The lesson for our hybridizers is to avoid the lines on which the foreign rosarians are working.

We have been surprised to see displayed in the windows of even the most pretentious florists' establishments during the past week, green-dyed carnations. Of all the outrages to which good flowers have ever been subjected, this is about the meanest. We might reasonably look for such monstrosities among the gimcracks offered by the curbstone fakir, but that these besmeared things should be presented seriously as stock in trade, alongside high-grade roses, orchids, and violets in so-called "leading florists'" windows, is something not easily accounted for.

The abundance of roses in the cut-flower markets at this season affords an excellent opportunity for the rose grower to make a reputation by discarding his inferior cut and shipping only the high-grade product. There is at all times a grade which is able to maintain an exclusive position and the market will come to it regardless of the piling-up which may be going on down below. The grower who has the courage to sacrifice something to make this kind of a reputation for whatever goes out with his label on it is sure to win out, and the present is an admirable time for practising this kind of courage.

A better general knowledge of roses and their requirements is needed. The florist can hardly be expected to assume the work of education, but he can do much towards it without any extraordinary effort, and it will all be returned to him in manifold ways. He can, at least, refrain from any representation or advice that is liable to bring failure and disappointment to his patrons. In selling a rose not reliably hardy he can warn his customers as to the special care it will require to endure the winter; or, in the case of a budded rose, he can instruct as to the danger from "suckers" and how to guard against it. With these two points alone he will strike at the root of more than half the cause of dissatisfaction in rose growing and accomplish much towards restoring the rose to its rightful eminence among the garden favorites.

Comment is often made on the inactivity of American rosarians and reproachful comparisons are occasionally drawn between their seeming indifference to the larger interests of their specialty and the enthusiasm of the ever-hustling carnation fanciers. But these two lines cannot fairly be regarded as parallel. He who would undertake the tedious and uncertain problem of evolving a valuable new rose — especially a forcing rose — faces a proposition much more formidable than that which confronts his friend, the carnationist, when he sets out on a similar enterprise. In the multitude of new roses sent out each season under ostentatious titles by the busy European hybridists the American rose enthusiast finds little to justify him in sacrificing the best part of his business life in the philanthropic effort to improve the rose and foster its interests and any one who does devote himself to such a task is entitled to all the support and encouragement his fellows are capable of bestowing.

Our correspondence columns reflect the well-defined awakening which is in progress at the present time on the subject of rose improvement and suggest directions in which ultimate success may be found. To the discerning observer it will not be difficult to explain the absence of the rose as a specialty from so many gardens. The public, over-fastidious through familiarity with the exquisite products of the conservatory, and greedily following the lead of the traveling agent with his gaudy lithographs, has had no place in the garden or welcome in the heart for the sturdy varieties that bloomed so generously in the old-time gardens without a thought of winter protection. High-sounding names and gorgeous pictures have ruled the day, and, as in everything else, the "new crop of fools" has been always forthcoming to squander money in cheap budded rubbish and microscopic "mail order" stuff, much of it unfitted for anything but southern climes. Of the untold millions of such material, disseminated over this country during the past quarter century, what have we to show? Mainly a disheartened public, so far as garden roses are concerned. Is it not high time for the "return to nature"? Let our rosarians give up the futile struggle to perform impossibilities, and start in to furnish the people of these northern States garden roses with the hardiness and endurance needed to withstand the climate. The cordial reception given the Crimson Rambler is good evidence that the public are ready to respond when something good is offered. As to ever-blooming qualities, it is impossible to resist the unpalatable conviction that, for the climate of the greater part of the northern United States, we must look elsewhere than to the tea blood. With the majority of people the tea rose must remain in the bedding-plant class.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

We enjoy HORTICULTURE and wish you every success for it. — F. C. W.

Accept my congratulations on the splendid success of HORTICULTURE. — J. B. C.

Please repeat the enclosed ad until further notice. It is highly satisfactory indeed. — H. A. S.

Please find herewith $1 for HORTICULTURE. It is getting better all the time. It touches subjects others have overlooked. There are none to spare of *good* magazines. I predict this has come to stay. — G. M. K.

RANDOLPH, VT., March 20, 1905
Editor HORTICULTURE, Boston, Mass.

Dear Sir: — It gives me pleasure to state that the advertisement I placed in your paper has given most satisfactory results. Would further add that HORTICULTURE is a credit to the publisher and is deserving of a grand effort on the part of those in the florists' profession (and especially those of the New England States) to use its columns to help place it in the leading position where it should be (if, indeed, it is not already there).

Wishing you continued success, I am,
Yours very truly,
H. M. TOTMAN.

THE ROSE

Though many a flower has graced the lay
And formed the theme of poets' song —
Has gently flowed in Grecian phrase,
Or tripped upon the Roman's tongue;
Yet, still, in ancient song and story
The Rose shines forth in beauty rare,
Enveloped with a halo bright,
And made so glorious, rich, and fair,
That all the flowers must yield their seat,
And lay their beauty at its feet.
Anacreon sang its primal birth,
Old Homer praised its form of grace,
Catullus boasted of its charms,
Horace, its richly tinted face;
In fair Italia glowing words,
Tasso and Metastasio sang;
And 'mong the groves of fair Cathay
The Persian Hafiz' accents rung.
The flowing tones of old Castile,
From Cameons and Sannazar,
And in our own pure English tongue
It was the signal note of war;
In many a poet's verse its beauty shone, —
Milton, the Bard of Avon, and the Great Unknown.
High valued were its flowers bright
By Helle's maids of yore;
It graced their scene of festive glee
In the classic vales of Arcady;
And all the honors bore;
And shed its fragrance on the breeze,
That swept through academic grove,
Where sages with their scholars rove —
The land of Pericles.
In the sunny clime of Suristan,
On India's burning shore,
Amid the Brahmin's sacred shades,
Or in the wreaths that Persian maids,
Sporting in bright and sunny glades,
In graceful beauty wore;
Upon the banks of Jordan's stream,
Still flowing softly on,
Where Judah's maidens once did lave,
Or where the lofty cedars wave,
On time-worn Lebanon;
The Rose is still most rich and sweet,
And wears the crown for beauty meet.
I have basked in the beauty of southern climes,
And wandered through groves of palm and limes,
Where dark-eyed Spanish girls
Would linger in their myrtle bowers,
With garlands rich of orange flowers
Would weave their raven curls,
And fasten 'mid their lustrous hair
The fire-fly's glittering light,
Which, brighter than the diamond's sheen,
Bursts on the dazzled sight.
But yet I would not give for these,
Produce of tropic sun and breeze —
For all the flowers in beauty there —
The Rose our northern maidens wear.
I've crossed the Andes' lofty height,
Its mountains, forest-crowned,
And 'mong the devious, tangled paths
Of tropic thickets wound.
In fair Aragua's fertile vale,
In Hayti's fields of bloom,
I've marked the prickly cactus tribe
Its richest tints assume.
I've passed through fragrant coffee groves,
By the tall Bucara tree,
And by the cocoa and the palm,
With the trupeol warbling free;
Upon the flower-clad turf, and where
The rich orchidia climbs in air.
But not 'mid all this gorgeous bloom,
By tropic climate wove,
Nor Florida's rich magnolia
And fragrant orange grove;
Nor the graceful vines of southern France,
Nor Italy's fair bowers,
Nor England's lofty domes of glass
All filled with gorgeous flowers;
Nor in our own wide prairie land,
With bud and bloom on every hand,
Is there a single flower that grows
Can vie in beauty with the Rose.

Then seek, in southern, tropic air,
And in our northern glade,
And in the bright and gay parterre,
And by the forest shade,
Where every flower, and leaf, and tree,
In graceful blending met,
Presents new beauty to the eye,
Of azure or of jet;
And take each blossom, rich and rare,
Which thou may'st find in beauty there;
Combine their color, form and grace,
And each unpleasant tint erase;
Then recreate the loveliest flower
That e'er shed fragrance in a bower;
Let all its sweets and charms unclose;
It cannot equal yet the Rose.

SAMUEL B. PARSONS.

AFTER ADJOURNMENT

"The weary woman stays her task,
That perfume to inhale;
The pale-faced children pause to ask
What breath is on the gale.
And none that breathes that sweetened air,
But have a gentle thought;
A gleam of something good and fair
Across the spirit brought."

Over half a million brown-tail moth nests have been collected this season in the city of Beverly, Mass., under the direction of tree warden Frank W. Hammond. As each nest contains from two hundred to four hundred live caterpillars, figure out the result in case all these moths were allowed to come to maturity and breed another generation, and you will understand the rapid spread of this terrible pest.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Rose growers report grafting done, and spring work well in hand. J. McFarland of North Easton has his first President Carnot blooms on the market, nice, long-stemmed goods. Mr. McFarland grows his hybrids in boxes, starting them about the first of February and giving them manure water from two to three times a week.

I had the pleasure of viewing a remarkable bed of violets at the establishment of Kidder Bros., Lincoln, last Saturday. For quality and quantity they were far ahead of any violets I have ever seen at this season. Mr. Kidder attributes his success to the fact that he keeps the temperature as near the freezing point as possible without actually frosting them. His carnations prove the wisdom of early planting in the house. He has a house 50×250 which he intends to fill during April.

A novelty in the strawberry line shown by Charles Lunt of Lincoln, is a barrel with two-inch holes bored in the sides, filled with rich loam and with strawberry plants set in the holes. The plants were set out last spring and grown through the summer. After being allowed to freeze, they were placed in the house in a gentle heat and at present the barrel is a mass of flowers and fruit. Mr. Lunt has several new seedling strawberries of much merit.

THOS. F. MATTHEWS.

Personal

Visitor in Boston this week: —Thos. Knight, representing Julius Roehrs Company, Rutherford, N. J., ready to talk bay trees and all other good things.

H. P. Converse of New York has bought Conyer's Manor, an estate of 600 acres in Greenwich, Conn., and will develop it into one of the finest places in this country. Harry Wild, for the past eight years superintendent of the A. W. Blake estate at Brookline, Mass., has been appointed and already assumed charge of the work on the new place as chief manager. Many staunch friends in Boston extend congratulations to Mr. Wild on his well-deserved honor.

CHICAGO PERSONALS

P. J. Foley has returned from his business trip to Montana.

Lublines & Trinz have opened a store at State and Washington streets.

A. L. Vaughan of Vaughan & Sperry is booming business in Michigan this week.

Mr. and Mrs. O. P. Bassett returned March 14 from a month's stay at Atlanta, Ga.

A. Siegel and J. E. Foster of St. Louis, H. E. Philpott, Winnipeg, Can., were recent visitors.

John Lang has returned from Germany and is again in possession of his place on Robey and Melrose streets.

The *Chicago Chronicle* calls Alois P. Frey of Lincoln Park the "Luther Burbank of Chicago." Two large photographs and a full column about his new type of cinerarias appeared in their issue of March 13th.

THE ROSE IN DECORATIVE ART

A Paper read before the New York Florists' Club by Robert Kift, March 13

When Dame Nature stirs in the early spring and arouses into life the snowdrops and crocuses, which in turn are followed by their more pretentious kinsmen, the gaudy tulips, the daffodils, and stately hyacinths, she pauses awhile to admire, and then actively and vigorously her work goes on, until the whole landscape is pictured with her beautiful art. But still she presses forward, not satisfied, until at last the crowning glory of her work appears — the Rose, the Queen of Flowers.

It is her masterpiece. She has endowed it with every virtue; it is most beautiful in form; it has almost all the colors of the rainbow; while its fragrance is most delightful. She guards it carefully, providing even an armor of thorns to protect it.

"'Tis sweet to dare the tangled fence
To cull the timid floweret thence."

Such is a brief description of the flower we honor to-night.

Almost the entire history of the roses of commerce as we know them to-day, covers but the short period since 1870. Prior to that time the camelia was the favored flower, and choice blossoms brought fabulous prices.

As soon, however, as the rose made its appearance the camelia was doomed. Bon Silène, Safrano, Marshal Niel, and La Marque, small and insignificant as, with the exception of the Marshal Niel, they appeared, they soon relegated the old favorite to the background and finally to oblivion.

The decorative features of the flower did not count for much until the long-stemmed hybrids made their appearance. The advent of Mr. Ernest Asmus's "Glory of Paris" (Anna de Diesbach) made a great sensation; this was followed by the Ulrich Brunner and the Mrs. John Laing. Then came the new Teas, the Catherine Mermet, followed by the Bride and Bridesmaid.

It was, however, that Queen of Roses, the American Beauty, introduced to the public by the Field Bros. of Washington, that placed the rose in the van as a decorative flower. Now, no important decoration appears complete without a liberal representation of this variety to add dignity to the occasion.

Peter Henderson's book on the art of bouquet making and the general arrangement of cut flowers was the recognized authority of his period. The close compact form presenting solid masses of flowers without foliage, was then the fashion, and the details of arrangement are minutely described in this work. Since then, with the great strides made in the cultivation of flowers and the production of long-stemmed blossoms, the styles have changed, the close, formal designs have been succeeded by the more graceful and natural arrangements that display the beauty of stem and foliage as well as flower.

In the garden, Dame Nature arranges her flowers in the most beautiful manner conceivable: the branches of the climbers bend over gracefully with their wealth of bloom, all, even the smallest blossom, uniting into a perfect whole, while the bush varieties throw up their single buds or clusters, that stand from out their wealth of foliage in perfect symmetry. Such effects can be produced in the ball-room or elaborate house functions, the growing rose being simulated and made to climb in any direction, and when covered with blossoms makes a capital counterfeit and beautiful decoration.

For the wedding, that most joyful time of life, there is no flower that more fittingly graces the occasion than the rose. In the church, the altar, the chancel, the windows, the pew ends, in fact, at every available point there should be seen this most beautiful flower.

The bride and her maids should carry them, and under a bower, surrounded on every hand by beautiful roses, she should stand to receive the good wishes of her guests.

The beautiful custom of greeting the débutante upon her entrance into society with the choicest flowers, has grown into prominence the past decade, and offers great opportunities for the artist. Probably no other occasion brings together such an assortment of flowers as are to be found among the hundreds of clusters that grace the receptions of the popular young buds. The rose is also found in the front ranks here, as seventy-five per cent of the bouquets are sure to be of our favorite flower.

The arrangement of flowers for the dining-table is an art in itself, and the rose easily leads in popularity for this purpose. The formal plateau or mound has given place to the more graceful arrangement in low bowls, below, or high receptacles that carry the flowers above the line of vision. When loosely arranged in such vases all the beauty and grace of the flower are brought out. They should not be so crowded as to lose their individuality, but enough should be used to get the color effect, and their quality and freshness should always be such as to leave nothing to be desired.

Tall vases of long-stemmed American Beauties are still very popular, and certainly the most effective of all roses, whether used in groups of palms, on the banquet table, or in other of the many places that seem ideal for them, and for which there appears to be almost no substitute.

The use of flowers to carry the voice of condolence to bereaved ones is a beautiful custom, and one, let us hope, that will never die out. It can hardly be classed as decorative art, yet for those who have the final disposition of flowers as they are placed before the public to-day, it is a very important branch of the business, and as much care and attention must be given, and as skilful treatment in the arrangement, as for any other occasion. Here, as elsewhere, simplicity has asserted itself, and the cluster of long-stemmed roses and the wreath, the least formal of all designs, are fast growing in popularity.

If we can believe the accounts of the extravagant use of roses thousands of years ago, and they appear to be authentic, our most extensive decorations are as nothing when compared to these elaborate displays, as much as one hundred thousand dollars having been spent by Nero for roses for one entertainment. What they sold for by the dozen may be conjectured from the following, copied from Mr. Parsons' book on "The Rose," published in 1847:

"If the Egyptians cultivated roses for transportation to Rome during the winter, they must have had very extensive plantations for the purpose.

"The exportation could not have been of loose flowers or they would have been withered long before the termination of the voyage. Neither could it have been of rooted plants in a dormant state, as nurserymen now send them to every part of the world, because the Romans had at that time no means of causing them to vegetate and bloom in the winter. On the contrary, the cultivators at Alexandria and Memphis must of necessity have sent them away in the vases and boxes in which they had planted them with that object, and when they were just beginning to break from the bud, in order that they might arrive in Rome at the moment they commenced expanding.

"At that remote period, when navigation was far behind its present state of perfection, the voyage from the mouth of the Nile to the coast of Italy occupied more than twenty days. When this long voyage is considered, and also the quantity of roses required by the Romans to enwreath their crowns and garlands, to cover their tables and couches and the pavements of their festive halls and to surround the urns which contained the ashes of their dead, it is evident that the Egyptians who traded in roses in order to satisfy the prodigality of the Romans, would be compelled to keep in readiness a certain number of vessels to be laden with boxes or vases of rose plants so prepared as not to bloom before their delivery at Rome.

"The cost of roses thus delivered in Rome must have been immense, but we do not find a single passage in ancient authors which can give any light on this point; they only tell us that nothing for the gratification of luxury was considered too costly for the wealthy Roman citizen."

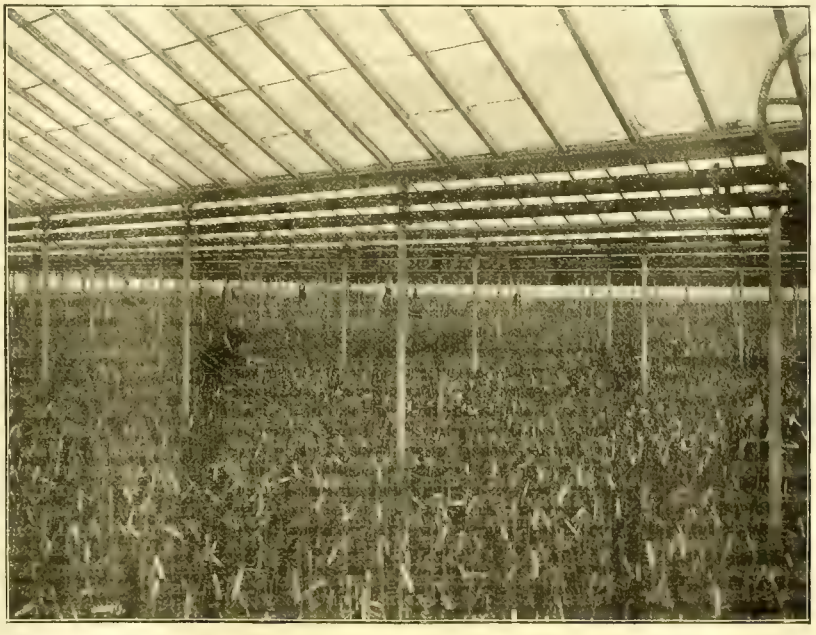
What would rose bushes in bud, such as we know them to-day, look like after a three-weeks journey by sea? They must have been impregnated with the same blood as Burbank's fadeless flower; in fact, we are led to wonder if the roses of that day were roses at all, or at least such as we know them now.

It appears to have been the custom at that period to use flowers most lavishly, and particularly for dinners, and all social occasions, and for the dead.

In addition to the decorations for the table the couches upon which the guests reclined were elaborately decked with roses, as were also the floors of the rooms.

Cleopatra covered the floors of her dining rooms with rose leaves to a considerable depth, and over them placed a fine net, so that her guests might tread the floral carpet without inconvenience. It was the custom to cover the beds of the guests with roses, and some who slept under layers of rose petals were annoyed beyond measure if any of them should start to curl, indicating they were not fresh. I fear that some of their descendants are among our patrons of to-day.

The rose has many rivals as a decorative flower. The chrysanthemum, the carnation, the lily, and even that butterfly of fashion, the orchid, are all in the race for popularily. But the rose, endowed with so many points of excellence is still the one great favorite.



One thing more may be said of the rose that can hardly apply to any other flower, and that is its changing beauty. As a bud we admire it, and as it slowly develops until half blown, it grows more and more beautiful, until finally, when fully expanded, it takes another form and gradually fades away.

"Oh, there is nought in nature bright,
Where roses do not shed their light!
And when, at length, with pale decline
Its florid beauties fade and pine,
Sweet as in youth its balmy breath
Diffuses odors e'en in death."

Roses and Other Plants at Riverton

You may have heard that J. D. Eisele has had a divorce? No? Well, it's quite true, altho' not of the kind matrimonial — only a divorce from business for a couple of months, during which time he took a trip down to Bermuda, where there was nothing to do all day but sun one's self on the hotel veranda, smoke Havanas, and look at the blue sea glistening a quarter of a mile away. When he left there it was seventy-two in the shade; when he landed at New York it was three below. Quite a contrast.

From the foregoing you will gather that there must be more vim and energy around the Dreer establishment at Riverton now than ever, and you will not be mistaken, although it has always been noted as a high pressure factory for the production of palms, ferns, and all kinds of greenhouse stock by the million. Of late years hardy perennials have forged more and more to the front at Dreer's, and it may safely be said that these also are now being produced by the million. A notable feature in connection with the latter is that they are all pot grown. It costs more to grow them in pots, but there are several compensating features, chief of which is that they give better satisfaction to customers, as they ship better and during a much extended season. Although a 4-inch pot of, say, Papaver orientalis, chuck full of roots, may nor look as imposing as a clump a foot square, it will carry better, and in the long run give far more satisfaction to the customer.

The peony is right at the front here, and tens of thousands are stored inside at present in damp sawdust, cleaned, and divided, ready for shipment during the early spring for the benefit of those who refuse to remember that they should have got them earlier. We noted large stocks of such favorite varieties as Festiva maxima, Victoria tricolor, Grandiflora rubra, Duc de Cazes, Miranda, Argus, Tenuifolia plena, Achille, and dozens of other fine sorts too numerous to mention. Peat moss — a finely sifted grade of the Hamburg article — has been found to be the very best thing for keeping the roots plump and fresh during storage.

Among hardy plants the rose holds front rank here, of course, and is an important department. Our photograph gives a view of a batch of one hundred and twenty thousand, all in 5- and 6-inch pots, for spring sales, and just beginning to break into leaf. This section is interesting and inspiring and we can just imagine what a wealth of potential beauty is stored away in this half acre of bare branches.

Mostly bare, that is — one variety, Killarney, had a few first leaves half developed, and they were red as a poinsettia. Yes, sir; no exaggeration — a most remarkable feature of this variety. At a distance one might take these for blossoms! Killarney, as a grand hardy bedder, has been a good deal written about of late, so it is unnecessary to comment on it further at this time, except to repeat for the benefit of those who have not been following up the matter closely, that it is a Hybrid Tea, quite hardy in this latitude, an everbloomer, brilliant pink in color, and a grand new rose in every way. "God bless Ireland!"

Mr. Eisele is still an enthusiast on another hardy Hybrid Tea, Gruss an Teplitz, which he says is the reddest of all red roses and one that has given satisfaction everywhere during the past two seasons. It is a phenomenal bloomer, larger than Hermosa, very fragrant, and a strong grower.

Among the newer Hybrid Remontants special praise is given to Frau Karl Druschki, a beautiful snow-white variety from Germany. The flower is very large, with bell-shaped petals, perfect in form, and the plant is a strong healthy grower.

A magnificent stock of that little gem over which we are all more or less enthusiastic at the present time, the Baby Rambler, greeted us here and is one of the fruits of that wise and enterprizing policy of this house, a frequent trip through Europe. While on the subject of Ramblers let us not forget to mention that fine improvement on Crimson Rambler, the Philadelphia Rambler, brighter and better than the type, and the Dorothy Perkins and Farquhar, both beautiful pink sorts. The Waltham Rambler is a single pink variety from England that has excited much favorable comment both here and abroad, and is considered worthy of a place in every collection.

In this hurried sketch it is understood of course that we speak only of the newer favorites in the rose world — that being the main topic of interest to the advanced plantsman to whom Horticulture appeals. We consequently pass over the vast collection of all the main classes which are represented here: the Damasks, the Rugosas, the hardy and tender Pillars, the Bengals, the Moss section, the general collection of Teas and Remontants, the Memorials, the Sweet Briars, and so forth. Suffice it to say that if it's good, one is pretty sure to find it at Dreer's, or, to parody the New York luminary — if you see it at Dreer's, it's so. One point it is well to emphasize: no small roses for the mailing trade are grown here. Every plant is from one to three years old and well established, and intended for quite a different class of trade from that to which the mailing houses cater. The vast business done by each system shows that there is ample room in this country for both styles of production and distribution.

Leaving the roses, we note briefly a few interesting items before making a rush for our train:

Musa ensete, that grand tropical foliage plant, being raised from seed and just peeping above the soil.

Thatcher's Pygmy Asparagus, or, to give it its really truly name, Asparagus plumosus nanus compactus, a bench of it in 2½-inch pots, just right for fern dishes.

Thirty-two different kinds of Marantas and a whole host of other stove plants such as Alocasias, Difienbachias, Phyllotæniums, etc. These are in more demand of recent years, and the collection has been enlarged to meet the emergency.

Limnocharis, the Water Poppy, with its beautiful single yellow blossoms in full array in one of the houses of tender aquatics. Here the workmen are constantly dabbling like ducks, propagating, shifting, cleaning. We asked one of them if they finally got web-footed. His laconic response was to hold out *his hands*, with the fingers extended. The boss gave him a quizzical look, and remarked, half-aside, "The gentleman said *web-footed*, my lad, what do you show him your hands for?" — "Why, sir, these are our feet in this department."

An enormous stock of Boston fern, fine, clean, stock which Mr. Eisele says is still popular, although he believes Scottii is going to supersede it. Although Scottii propagates more slowly, more can be grown to the square foot — something like three to one.

Pteris Childsii. This is the Farleyense among the pterises, and a most graceful and charming plant.

Piersonii, a nice lot; we were told this is now selling better. It is in great demand on the Pacific coast where it is grown extensively out of doors.

Camellias in 5- and 6-inch pots — a

big stock in bud and bloom, red, white, pink, variegated. The demand for these is mostly from the south, although they are coming in again to a limited extent elsewhere.

Adonis Davurica, fl. pl., in bloom in cold frame; it's beautiful golden yellow blossoms very charming in the crisp sunshine of mid-March. Bloomed out of doors February 5th this year, and is undoubtedly the earliest spring flower. It is the Japanese emblem of "good-luck," and might be appropriately re-christened here as the "Japanese Shamrock." I took a specimen to P. S. Dooner on St. Patrick's Day, thinking he would feel interested and pleased; but found to my dismay that I had run up against a pro-Russian. Dear, dear!

Iris pallida variegata, a most beautiful green and yellow variegation, the handsomest thing you can imagine; superior in some respects to Pandanus Veitchii. Think this belongs to the Dalmatica section.

Before going we wanted to take just one glimpse of the fifty thousand azaleas for Easter which have been such a feature in the past. We were met with a head shake, apparently negative. "No?" "Non!" "Can't we just take a look?" "No." "Why?" "Well, you see, the fact is, we haven't any this year. We thought Easter being so late and the height of our busy season then on, we would simply be unable to handle them, and that we had better leave them alone altogether."

As the full significance of this fact in connection with the azalea supply for the Philadelphia market strikes you, perhaps you will get a hustle on to pick up the necessary supply somewhere else. There's nothing in sight, so far as I know, to take the place of that Dreer fifty thousand. Look out for sky-rockets!

GEORGE C. WATSON.

Philadelphia, March 17, 1905.

THE ROSE GARDEN

Read before Montreal Gardeners' and Florists' Club by Thomas Pewtress, March, 6, 1905.

Mr. President and Fellow Members: The subject that most appeals to my mind at the present time is that of the rose for outdoor cultivation or what we may call hardy rose. By hardy I mean those varieties that I consider will stand the climate of Canada in the province of Quebec, and come through the winter to bloom as only the rose can bloom in the month of June. To take up this subject and treat it as it should be treated would take up the remaining nights of this year and next, but I will start with a few simple facts concerning this very large and beautiful and interesting family. There are supposed to be about 250 species, but they may be brought down to about 30 or 40 distinct species. Those I remember most distinctly, and probably some here may share that memory, were the ones that used to grow by the lanes and in the hedge rows of the old country, the soft young shoots of which we boys used to consider a dainty morsel, the Rosa canina or Dog Rose. Since then I have spent days making briar cuttings from this same variety which I consider the best for hardy roses, much better than the seedling briar or Manetti. The species that interests us most is Rosa centifolia, or the old Cabbage Rose from which have sprung so many beautiful varieties, and while on this subject I may say that I am of opinion that a class of roses could be raised from the wild Canadian rose, crossed with Rosa spinosisima or Scotch rose which is very hardy, and by again crossing with any hardy H. P. Always using the native rose as seed bearer a hybrid may be raised that would not require protection in winter. But this subject would have to be taken up and worked out by men with means and time which the florists and gardeners have not to spare for it. I will now pass on to the hybrids with which we are familiar. First in point of numbers come the hybrid perpetual flowering, but I should not put that first in importance as I consider the new hybrid Teas are the roses of the future, for freedom of flowering and beauty of flower. They combine the H. P. and Teas and I consider them an improvement on both, having the broad petals of the H. P. and the long bud of the Tea, and they open out well in water when cut in the bud state in the morning; this is much in their favor, as roses do not stand the burning heat of a clear Canadian summer day very well.

In addition to the H. P. and H. T. there are Hybrid China, Hybrid Bourbon, Hybrid Polyantha, Hybrid Rugosa, and last, but not least, the Hybrid Sweet Brier, handed down to us by Lord Penzance.

Of the Hybrid Perpetual I consider the following the best for this place, having proved them for two years, and some have been here for ten years and are strong and healthy now and throw off some very fine flowers, viz. Alfred Colomb, Augustine Guinoisseau, Duke of Edinburgh, Gen. Jacqueminot, Henrich Schultheis, Jules Margottin, John Hopper, La France, La France de '89, Frau Karl Druschke, Margaret Dickson, Marie Baumann, Marquise de Castellane, Mrs. John Laing, Prince Camille de Rohan, Reynolds Hole, Ulrich Brummer, Victor Hugo. Hybrid Teas: Bell Siebriecht, Bessy Brown, Kaiserin Augusta Victoria, Mme. Abel Chatenay, Caroline Testout, Souv. du Pres. Carnot, Duchess of Portland, Mildred Grant, Lady Moyra Beauclere, Antoine Rivoire, Lady Battersea, Marquise Lita. Hardy Teas and Noisette, Anna Ollivier, Catherine Mermet, Francis Kruger, Hon. Edith Gifford, Jean Ducher, Mme. Hoste, Maman Cochet, L' Ideale, Mme. Pierre Cochet. Hybrid Bourbon, Mme. Isaac Peirre. Hybrid China, Laurette, Messimy, Mme. Eugene Resal.

Polyanth Ramblers, Thalia, Helene, Euphrosine, Crimson Rambler. Aglaia, Dorothy Perkins. Polyantha Dwarf, Anne Marie de Montravel, Cecile Brunner, Gloire des Polyantha, Mignonette, Perle d' Or, Paquerette. Moss Roses, Blanche Moreau, Crested Moss, Old Pink. Rosa Rugosa, Crimson and White. Striped Provence, York and Lancaster. The new single Tea roses of Messrs. Dickson are a class to themselves and are very free flowering. Irish Beauty, Irish Modesty, Irish Pride, Brightness, Star, and Glory. Also the beautiful sweet-briers of Lord Penzance.

I know I have omitted a great many good things, but the foregoing varieties would make up a very choice collection. As regards culture I consider roses should have a garden to themselves in any place, large or small. They want a sheltered spot but not under other trees. Any situation that has a wind break will suit them. They like plenty of air, but will not stand the full force of a west wind blowing them and bruise ing their young shoots. The soil is a very important item in rose culture. If the natural soil is very light I would advise some very heavy clay loam to be well mixed with it, if the light soil can be removed altogether so much the better and a compost of loam and rotten manure made to take its place. The ground should be trenched two and a half feet deep, and cow manure mixed with the subsoil, then eighteen inches of the compost put over the surface. The autumn is the best time to prepare the ground, and the spring to plant.

While planting have at hand a barrowful of soil well pulverized, make a hole for each plant and use the soil to plant in, taking care the roots do not come in contact with any manure. Many failures result from this cause, as when the plant throws out young roots they strike the manure instead of soil, and the manure being too strong for them they just die away again. Deep planting should be avoided. This often causes failure. It is better too light than too deep. As far as I have been able to judge the union of the plant should be about an inch below the surface of the soil: of course I am speaking of roses on seedling brier or brier cuttings, stock which I consider the best to use. The roots should be cut back with a sharp knife to about nine inches, and bruised or broken roots removed altogether. After planting, the ground round the plants should be made as firm as possible, by treading if at all practicable. Now for pruning: this again requires care and judgment; if the plant is not pruned hard enough there will be too many blind shoots, robbing the plant and doing no good. If the plant be at all weakly it will require harder pruning, but a vigorous, strong plant would possibly do best with lighter treatment. I think pruning should be done as early as possible, that is, as soon as they can possibly be uncovered. If the sap has risen too much, the plant will bleed badly and weaken itself. It is impossible to say exactly when to uncover the roses, but the end of March, a fortnight earlier or later, according to season. I will not deal with insect pests as you are all familiar with them and their remedies.

Our mode of covering for the winter has been to first earth up the plants with six or eight inches of soil taken from between the rows, then pry down the roots in a row, or tie the first one to a stake and tie each rose to its neighbor, then put on a heavy mulch of manure with the droppings well shaken out of it. This to prevent heating should the weather turn mild afterwards. It is better to uncover as early as possible after the snow goes. Roses will bear fifteen to twenty degrees of frost.

"In rose-growing as in everything else, earnestness and industry, born of love, must achieve success."— DEAN HOLE.

AMERICAN ROSE SOCIETY

Enthusiastic Meeting and Magnificent Exhibition in Boston

GREAT CROWDS THRONG THE HALLS OF THE MASSACHUSETTS HORTICULTURAL SOCIETY

Many Visitors from All Sections

The weather man saved his choicest brand of spring weather for the opening of the exhibition to which rose lovers have been looking forward, and clear skies and balmy air greeted Boston's distinguished visitors. Thursday forenoon was occupied in the work of unpacking and staging exhibits, and in the exchange of greetings between old friends, and when the appointed hour arrived everything was in readiness for the judges' examination.

The display of roses can be safely pronounced the most comprehensive ever staged at this season of the year on the American continent. Especially admired was the group of ramblers from M. H. Walsh. The carnation growers also made an unprecedented display of high-class flowers. Orchids were also shown in dazzling array. In the plant groups for the Massachusetts Horticultural Society's prizes, the cyclamens and cinerarias were, as in past years, absolutely invincible. The large exhibition hall was a perfect riot of color in acacias, azaleas, bougainvilleas, and bulb flowers. The full list of prize awards will appear in our next issue. Just as we close the forms the news reaches us that the Lord & Burnham cup for best fifty American Beauty roses stays in Boston for this year, having been won by Waban Rose Conservatories.

At 11 A.M. on Friday, March 24, the society convened in annual session. The address of President Montgomery and reports of secretary and treasurer were presented and are given herewith. The address on hardy garden roses by M. H. Walsh, and other proceedings of the Society will appear in full in our issue of next week.

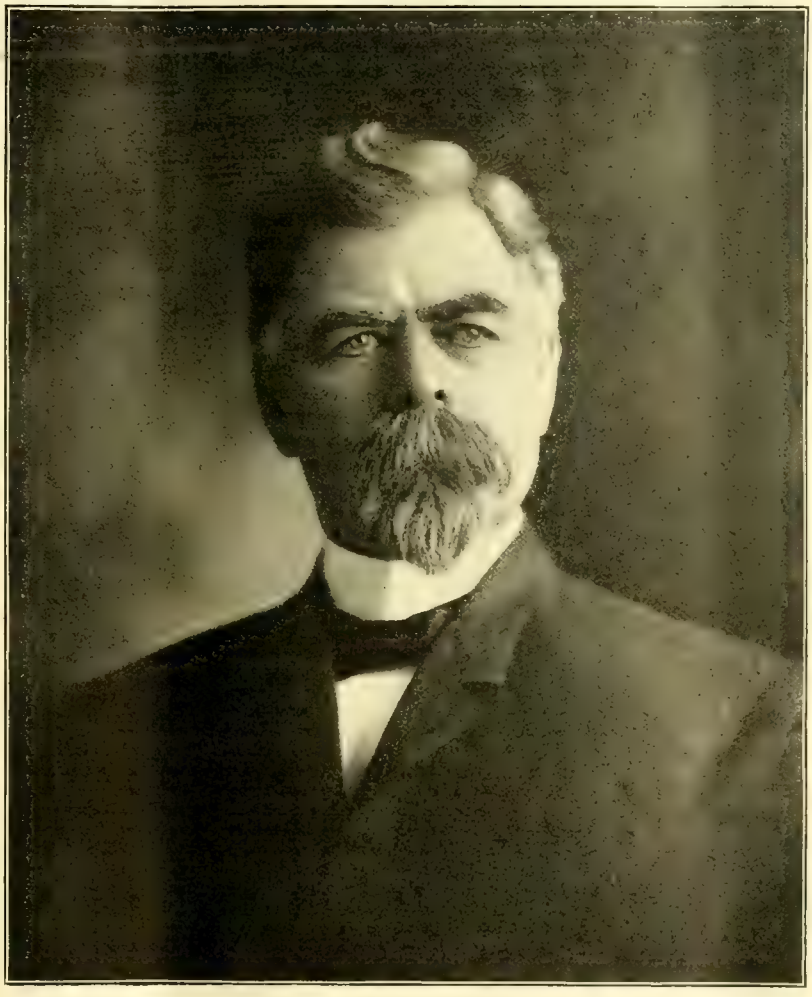
Among the visitors are F. R. Newbold, Poughkeepsie, N. Y.; S. S. Pennock, J. L. Pennock, A. B. Cartledge, Philadelphia; Charles Ingram, Westerly, R. I.; A. Farenwald, Roslyn, Pa.; Peter Crowe, Utica, N. Y.; P. M. Pierson, Scarboro, N. Y.; J. B. Nugent, Jr., F. H. Traendly, W. F. Sheridan, New York City; F. R. Pierson, Tarrytown, N. Y.; T. McCarthy, Providence, R. I.; J. S. Hay, Philadelphia; J. F. Huss, Carl Fohn, and Alex Cumming, Hartford, Conn.; J. F. Struck, Summit, N. J.; Thos. Knight, Rutherford, N. J.; A. H. Langjahr and Mrs. Langjahr, New York; A. J. Guttman, New York; Robert Simpson, Clifton, N. J.; Frank Moore and daughter, Chatham, N. J.; Harry O. May, Summit, N. J.; Frank McMahon, Seabright, N. J.; F. Lautenschlager, Chicago; D. MacRorie, South Orange, N. J.; Paul Dailledouze and neice, Flatbush, N. Y.; Benj. Hammond and daughter, Fishkill, N. Y.

Address before the American Rose Society

By Alexander Montgomery, President, at Boston, March 23, 1905.

We have met again to take note of our progress and do homage to our queen, and although we have hardly made the progress that the Rose Society is entitled to, considering the vast amount of capital invested in the business and the number of able men who have made the cultivation of the rose their life work, yet I think that we begin to see light ahead. There have been suggested various reasons to account for the slow progress that this society has made. It has been charged against us that we are not national in that we have failed to cover the principle cities of the country, but, with patience on the part of our critics, and with the coöperation of those to whom this society has a right to look to for support, we will yet visit them all. The few pioneerswhohave done so much to nurse the young society along are entitled to our gratitude for work done, and when the time comes for the Rose Society to start on its peregrinations, I think I do not err in saying that it will have the hearty coöperation of those who have stood by it thus far. Distance will not diminish the interest in the flower of flowers, nor the society which stands for its advancement.

The rose has not lacked for enthusiasts any more than the carnation, but it has missed that incentive to bring rose men together that the carnation men have had, namely, something new. The shows have had but little variety, practically the same few varieties were forthcoming year after year; a little larger or smaller as we happened to carry them in our minds, or whether they happened to be our own or the other fellow's flowers, but evidence is not wanting that this will all be changed in the near future and we expect to again hear the cry go forth as it did in '61, but this time, thank God, it is not the soldier but the enthusiastic rosarian who raises the cry, "On to Richmond."



The American rose-grower has at last awakened to the fact that if a race of roses adapted to his needs is to be forthcoming, it must be done by himself. He has paid, in the past, thousands of dollars for European varieties that were seldom suited to his requirements, notwithstanding that they might be all that the raiser claimed for them when growing under their own conditions. This applies in large measure to roses for out door cultivation as well as to those grown under glass, and I am inclined to think that the former is the larger field for the hybridist, and with a reasonable amount of encouragement, I predict that the near future will see commendable progress made in a truly American type of roses adapted to the climatic conditions found here. It should be the duty of this society to encourage in every way possible the rose hybridist, as in large measure the future of the rose society will depend on him for the stimulating interest created by having something new. The commercial man ought to be alive to the fact that if the rose is to hold the place of honor and profit, he must have something to keep the buying public from becoming tired of seeing only the few familiar old varieties, however meritorious they may be.

A proceeding that I think would be of especial benefit to the introducer and buyer of new roses, would be for this society to appoint local committees at the large centers, after the method of the Chrysanthemum Society, to whom flowers could be sent to be judged according to the scale of the American Rose Society. For convenience this could be done at the various fall shows, and being judged by the official scale would be of value to all. The same committees could visit the new claimants in their home quarters and report on their winter qualities.

These judges could be appointed by the executive committee and the chairmen of these committees, or as many of them as were required, could be the judges at the annual show.

Now a word about the show itself. The schedule needs to be practically rewritten and adapted to the particular section of the country to which the show is to go the following year. A preliminary schedule should be sent out in the fall, otherwise the growers of pot roses are largely eliminated, and it will be in evidence at the Boston show that this can be made both an interesting and educational section of our shows. If possible a meeting of the executive committee should be held during the convention of the Society of American Florists, otherwise it will be almost impossible to get a majority of them together later in the season, as they are and should be men from wide apart sections of the country and find it difficult to leave their business later on.

In conclusion, I would ask one and all to stay and take part in this meeting, and if they can offer anything for the good of this society it is their duty to do so. To the young men I would extend a pressing invitation to take part in these proceedings, and if with their young and progressive ideas they can show us wherein a part of the machinery of this society has worn out or become obsolete, I promise them that to the best of my ability I will assist them to have it replaced by more modern works. Progress should be the hailing sign of this society, for the only place the American rosarian can afford to sit is in the very prow of the vessel, even at the risk of an occasional wave splashing over him.

Alexander Montgomery,
President of the American Rose Society

Secretary's Report

Mr. President and Members of the American Rose Society,

Gentlemen: — I have the honor to make the following report as secretary since the resignation of Mr. Barron last fall.

The number of members on the list when it came to my hands was 191, of whom 36 were life members, and 155 annual members. The majority of the latter had paid no assessments for two years or more. Bills were sent to all and the returns have been quite satisfactory, everything considered, as the treaturer's report will show. In the meantime five new life members and sixteen annual have been added.

Silver medals won two years ago, at the Anandale Rose Show by Crumwold Gardens and at Lenox, Mass., by Giraud Foster,have been struck off and sent to their owners. Through an error in the schedule, a silver cup was awarded at Poughkeepsie the same year, instead of a medal to F. Heeremans of Lenox. Mr. F. R. Newbold, who was president of the American Rose Society at that time has generously provided the cup and it has been forwarded, suitably engraved, to Mr. Heeremans.

The sentiment all over the country towards this Society is extremely cordial so far as I have been able to learn, and the outlook is most encouraging for the organization and the objects for which it stands.

Wm. J. Stewart, *Secretary.*

Treasurer's Report

Summary of the Report of the Treasurer, J. N. May ;

Receipts

March 13, 1903, Balance on hand	$971.12

NEWS NOTES

The greenhouses of F. C. Dowd at Madison, Conn., were totally destroyed by fire on March 13.

L. J. Kreshover is one of the appraisers in the assignment of Sigmund Geller, New York City.

W. B. Perkins, formerly at Becker's, has opened a flower store at 1880 Massachusetts Avenue, Cambridge, Mass.

Thomas M. Ulam & Co., Pittsburg, Pa., were closed by the sheriff on March 17, but it is hoped by many friends in the trade that a satisfactory adjustment may be made and the business allowed to continue.

NEWS OF THE CLUBS AND SOCIETIES

On Saturday, March 11, there was viewed by thousands of people of Cincinnati the greatest flower show that has ever been seen at the club rooms of the Cincinnati Florists' Club, and, as E. G. Hill remarked, in point of quality one of the finest shows this country has ever seen. The flowers shown were much better than were shown at Chicago during the national carnation meeting the past winter.

The exhibitors and what they staged are as follows: —

E. G. Hill & Co., five vases, that in their respective classes won. first, with red, variegated, and six commercial varieties one hundred mixed, and third wth light pink. The Chicago Carnation Company made the finest display that has ever been seen in Cincinnati, but unfortunately the rough handling at the hands of the express company and the limited time given to Secretary Murphy and E. G. Gillett to stage it caused it to lose some of its deserved lustre. This display was to a great extent the centre of attraction during the entire afternoon. The winnings were second on dark pink, variegated, and six commercial varieties one hundred mixed flowers, and third on white. Richard Witterstaetter showed the finest lot of seedlings that has ever been seen here. His Aristocrat, Afterglow and Valentine all scored from 91 to 95 points, aristocrat easily winning the S. A. F. silver medal, scoring 93 points. He took first on white, light pink and dark pink. First, second and third with seedlings, and first in general display. Mr. Honaker of Lexington, Ky., took second with Enchantress, and third with Lawson. J. W. Rodgers staged five vases that ranked high. He received third on six commercial varieties, one hundred blooms mixed. J. A. Peterson's plant display was very creditable. H. Weber and Sons, Oakland, Md., showed My Maryland and a variegated seedling, taking second for white and the S. A. F. bronze medal with Maryland, scoring 91 points. C. C. Murphy showed three vases of promising seedlings, W. E. Hall showed a fine red seedling, George & Allen showed Enchantress, and Ed. Rusch took third with vase of red. Theodore Bock had the hardest task he has ever undertaken, to adjust the prizes; there were six entries of Enchantress, and it was difficult to decide where to place the blue ribbon, and it was the same in all entries. J. W. Rodgers, who had charge of the show, and who has watched Mr. Bock render decisions for the past five years, said he never saw him spend so much time trying to place the premiums, as he did at this show, and it is no exaggeration to state that every vase that was staged was an exhibition lot of flowers in every sense of the word.

At 6 P.M. the local florists tendered a banquet to the visitors, at the Gibson House. E. G. Hill responded to the subject of Exhibitions. He spoke very fluently on what the European people were doing to get their products before the public, especially in cut-flower line. He praised the spirit and energy that is being put into the Cincinnati Florists' Society in this direction, predicting that great results for the welfare of floriculture will undoubtedly follow. The Society presented Judge Theodore Bock with a meerschaum pipe and cigar-holder smoking-set, President Ben George making the presentation speech.

At 8.30 the regular monthly meeting was called to order. After routine business was taken care of the president took the floor. He praised the board of directors, also Judge Bock for his efficient work, and thanked all of the exhibitors for what they had done, stating that he had a realizing sense of the fact that co-operation had crowned the past year with unprecedented success. Treasurer J. W. Rodgers, who was chairman of the finance committee, stated that the subscriptions were mostly all paid in, and also urged upon the stand-holders the desirability of their contributing liberally towards the same so as to continue the shows at the club-rooms, as the storemen will give a liberal sum to have the shows taken to a more central location, which will be very detrimental to the flower-market trade. E. G. Gillett and William Murphy urged the necessity of the Society getting ready to entertain the S. A. F. at the twenty-fifth anniversary, which was unanimously favored. R. Witterstaetter took the floor and with his usual generous spirit presented the Society with 50 per cent of his prize money, which amounted to forty dollars. A vote of thanks was extended to every contributor to the exhibition and the exhibition fund.

GARDENERS' AND FLORISTS' CLUB OF BOSTON

The meeting of this club on Tuesday evening, March 21, was largely attended, notwithstanding the storm, there being between sixty and seventy members present. There were more or less routine matters to be disposed of, as usual, but the main business and entertainment of the evening was to listen to a talk by William H. Elliott on what he had seen on his recent trip to Bermuda and the West Indies. Mr. Elliott's description of the islands, their vegetation, their people, buildings, social customs, etc., was exceedingly interesting, and all who were present must have felt well repaid for the effort. He was particularly impressed with the bougainvilleas, crotons and acalyphas in Bermuda. Visited several lily farms and found all stock more or less diseased. He made special mention of the quantities of tobacco being grown under cloth at Porto Rico and gave some interesting reminiscences of Havana and its fortifications.

An invitation was received for the club to visit the greenhouses of E. N. Peirce & Sons at Waltham, previous to Easter.

Vice-president Patten occupied the chair, president Wheeler being unable to attend.

James W. Newman of Boston has made an assignment, with liabilities $7,619 and assets $7,000. This name should not be confused with that of J. Newman & Sons

A Notable Orchid Collection

The orchid establishment of Mrs. George B. Wilson, at Castle Knoll, near Philadelphia, is now under the charge of Charles J. Bond, a recognized orchid expert of high attainments. There are fourteen houses in the range, well located to receive full sunlight, and the contents are in fine condition as the illustrations herewith given will show.

The collection of cypripediums began with some of the gems of the Corning collection years ago. Among the noteworthy species to be seen in the house shown in the illustration are C. Mandæ, C. callosum Sanderæ, C. Lawrenceanum Hyeanum, C. Harrisianum albens, C. tonso-Rothschildianum, C. barbato-Rothschildianum, Lord Derby, A. de Laresse, Mahleræ, and other Rothschildianum hybrids yet unflowered. The bellatulum section is represented by C. Charles Richman, Laurebell, Rowena, Chapmanii, barbato bellatulum, b. giganteum, b. album, and other gems including the rare C. Corningii. The two forms of C. Charlesworthii album are here at home, also C. Morganiæ, Youngianum, Memoria Moensii, Swinburnei, Alice, different forms of C. Calypso, and many others.

Special mention, however, must be made of the C. insignes. Grown in a cooler house, well up to the glass, they thrive splendidly, the northern aspect of the house making very little artificial shading necessary and abundance of light and ventilation tending to insure a good crop of bloom. The yellow group is very complete, comprising — C. insigne Sanderæ, Sanderianum, Dorothy, Youngeanum superbum, citrinum, Amesiæ, Lindenii, Ballæ, Lucianæ, Statterianum, Ernestii, Laura Kimball, Cobbianum, Lutchyanum, Millie Dow, Mrs G. B. Wilson, and aureum. Among the darker forms are Harefield Hall, Dominianum Nilsonii, many fine forms of Chantinii, etc. Looking down the house from the entrance, the white-tipped dorsal sepals and the bewildering array of bronze and golden-hued pouches make a very charming display. Two large houses are devoted to cattleyas, the Trianæ being perhaps the most important, and during their flowering season, from Christmas until well into March, are the admiration of all visitors. The house illustrated is the smaller of the cattleya houses and was photographed on February 20.

The C. Trianiæ are of specially selected finest types. A truly grand variety is Trianæ virginalis Castle Knoll var., sepals and petals white, throat delicate sulphur yellow, with just a faint tinge of color on the labellum, and the whole flower beautifully fringed.

A smaller house containing some 150 plants of Lælia pupurata will be worth visiting in the early summer. Another house is filled with L. anceps alba, 400 vigorous plants just commencing to grow. The next division is stocked with some 18 large pieces of Cœlogyne cristata alba, a quantity of the colored types of L. anceps, and a large batch of Lycaste Skinnerii.

The seedling house is replete with hybrids, from the seedling stage (of which there are 700) to plants in 12- and 14-inch pans. Among the latter are Lælio-Cattleya callistoglossa, L.-C. Henry, Greenwood, Nysa, La Fontaine, Grand Duchess Elizabeth, and smaller plants of L.-C. Canhamiæ, Amesiana, Pallas, and L.-C. cinnabrosa. A vigorous piece of L.-C. Bella highly prized, was purchased from the Corning collection, where it had been under the care of the late Mr. Grey for a number of years. It is perhaps the first piece of this meritorious hybrid imported this country. Of the various white to forms are C. Gaskelliana alba, Skinnerii alba, Harrisoniæ alba, Percivalliana alba, and several plants of intermedia alba.

The collection of dendrobes is small but growing; it comprises many fine hybrids of the D. nobile group and a number of seedlings soon to reach the flowering stage. Among the D. Phalænopsis Schrœderiana is the exquisite pure white form carrying three good spikes, flowering unusually late this year.

About 200 Phalænopsis are suspended in baskets from the roof of the East Indian house. In addition to the usual showy variety of this genera is the almost unique P. Harriettæ soon to flower, and a healthy piece of P. Sanderiana alba. Vandas, Ærides, Angræcums and other subjects from the East thrive in this house. Some forty plants of Vanda tricolor and its variety suavis, are showing spikes.

Towering above everything is an enormous Stauropsis gigantea, near to which is an exceptionally fine plant of Renanthera Lowii having six fine growths and being without doubt the largest specimen in any private collection in this country.

A World of Roses

From Bengal, shimmering in tropical fragrance; from turban'd Persia, redolent of poetry and romance; from imperial China, monarch of the centuries; from far Japan, land of the rising sun; from modern France, England, and America, from the pole to the equator, east and west, north and south, in every spot where civilization has found a lodgment, come roses: big roses, little roses, roses of every color; some perfumed with the fragrance of ecstacy, some daintily tea-scented, some charming with color alone; all gathered in their thousand and one variations of kind, habit, form, and color in the seventy crystal palaces which constitute the regal court of the Queen of Flowers in America, situated in a charming corner of rural Pennsylvania.

Do you doubt it? Do you opine that imagination has conjured up this fair vision and spread before you an ephemeral Elysium? The reality is as solid and true as the everlasting hills. Go and see for yourself. Take the prosaic Pennsylvania railroad at Philadelphia and journey forty miles southward into Chester County, drop off at the primitive but picturesque village of West Grove, go a mile to the southeast, and present your card at the portals of the Dingee & Conard Company's "Home of Flowers," and you will find there everything I have told you and more.

From P. Joseph Lynch, the general manager, down through all the gradations of captains of industry and captains of finance, captains of the house, and captains of the horse, to old Pat, who sifts the soil and wheels the barrow and does it better than any other man on the place (he has done it for

P. J. Lynch

forty years) there is the smoothest system, harmony, and contentment. The Quaker spirit of peace and order broods over all and that spirit is embodied in the grizzled but sturdy veteran, Charles Dingee, the founder of the house, who has an equal claim with Pat, the faithful, to the encomiums of posterity for having done well the work that came to his hand in the world with a single eye to right and truth.

I spent three delightful hours wandering over this establishment and hearing the knowing ones discourse on the merits of this or that favorite rose; why the Admiral Schley, the Franz Deegan, or the Souvenir de Pierre Notting were infinitely superior to all others; why the Baby Rambler was in a class by itself; and a myriad of other whys and wherefores, sufficient to make one's brain whirl when taken altogether in one dose.

My friends, I tell you not much in detail, it is impossible. You must go and see, or at least send for the book of roses. I can only tell you how I feel and perhaps under the circumstances that is best. Suffice it to say that the Dingee & Conard Company are the pioneer rose mail-order house of the world. They made a specialty of sending out small roses and other plants through the mails at a price within the reach of all, they revolutionized the industry by their economical and efficient methods, they planted roses in a million homes from the Atlantic to the Pacific, and made a fortune for themselves in doing it. They are still the biggest and best in their line and if that isn't glory, I'd like to know what is. *Verbum sapienti.*

George C. Watson

CUT-FLOWER MARKET REPORTS

CINCINNATI Trade has slackened in all its branches. Stock is beginning to accumulate, bulbous stock in particular. The past week has for the greater part resembled mid-summer, causing roses and carnations to pop open in great quantities and bulbous stock, especially daffodils and hyacinths to almost spoil on the plants before they were fit to cut. The present outlook for Easter stock is that it will be scarce as, with the present conditions of weather, it will be next to impossible to hold back any kind of bulbous material.

CHICAGO The enormous supply in all lines has kept pace with that of the past two weeks. The demand for high grade Teas is more pronounced than usual, but Bridesmaid with some growers is already losing color. Carnations are still received far above the needs of the trade although a partial recovery from the depressed conditions was occasioned by the demand on St. Patrick's Day, the demand for white being especially liberal. Outdoor bulbous stock from the south has put in appearance. Callas await a cleaning up sale, but good grade Harrisii is a quick sale stock. Violets are in over supply with sales as low as $1.50 per thousand. E. F. Winterson Co. are leading this week with cut rhododendrons. Wild smilax is giving some concern, the southern pickers reporting inability to gather stock on account of heavy rains. Ferns are advancing. Cold storage stock did not carry well this season; it is reported in some instances 50 per cent was damaged by burn.

LOUISVILLE Business conditions have been unusually good during the past week, stock in nearly every line being very heavily demanded. Roses, carnations, and violets are in excellent quality and demand. Lily of the valley rather slow. Miscellaneous stock satisfactory generally.

NEW YORK Three days of rain has not helped an already depressed market. Dealers find increased difficulty in clearing out except at a radical cut in price; in fact there is no fixed value to anything, only what the buyer is magnanimous enough to give in order to fill his limited requirements. The supply of Tea roses is more than sufficient to satisfy the present demand. The quality of roses is generally good. Gen. Jacqueminot has made its appearance, but aside from the few of especially fine stem and flower, has aroused little more than passing notice, owing to the large cut of Beauties, Brunners, and Liberties, all of which are fine. Of all the varieties of roses in the market including Killarney, Golden Gate, Chatenay, and Uncle John, Bridesmaid holds its own in the favor of flower buyers, but all these have shared in the decline in price.

Carnations are not so plentiful as roses, and consequently it has been possible to maintain a better proportionate price for them. Violet shipments are somewhat lighter and with good clear weather should average up etter, but the larger part of them are sold on the street, which means low prices.

Harrisii and longiflorum lilies are not as a rule, good, but good or poor, find few buyers, and are cheap. Bulbous stock has been so abundant and cheap that it is a relief to see less of it coming into the market. Tulips are not bringing much of a price, in fact, are too cheap to give the grower even a small margin of profit. Daffodils and jonquils are doing better; it is not necessary to job them out in lots. Sweet peas and mignonette can be had in quantity and at a reasonable figure.

Later reports up to the middle of the present week indicate that the overstock is not increasing. Roses in original lots are sold at figures much below quoted prices.

There are a few of the larger growers who are accustomed to distribute a part of their product among out-of-town dealers, but when trade falls off just that much more stock is thrown on the New York market and considering this and the added burden of disposing at home of nearly all the flowers shipped to the city, it is surprising that it is all absorbed at some kind of a price.

PHILADELPHIA The slump has come at last, good and proper. Fine sunny weather and slack demand has simply swamped the market for the time being. Good long-stem Beauties are bringing $12.50, where same grade were bringing $40 and $50 a week ago. This applies particularly to roses which are more easily affected by the weather. Proportionately the carnation market did not suffer so much, although it was bad enough. Violets and lily of the valley were in good demand and although at rather low figures moved readily and were a bright spot in an otherwise gloomy situation. Lilacs are nearing the wind-up. Gardenias moving fairly well at low prices. Easter lilies scarce and selling all right. Smilax of anything like good quality very scarce. Houses are generally cut out. Wild smilax is in good supply, but quality is not up to the mark.

PITTSBURG During the past week the market remained much the same as previously reported. No one in particular — either wholesale or retail — are boastful of good business. The weather on Saturday opened early with bright sunshine and by ten o'clock the Pittsburg market was crowded with stalls in the open air, with abundance of bloom of all description and potted plants were readily disposed of, good azaleas, nephrolepsis, and spireas selling for good prices; even daffodils were cleaned out by evening. The supply is large and plenty of good stock is obtainable at all the wholesale houses. American Beauties are still bringing in high prices, especially fancy stock. Carnations are cleaning up pretty well this week. Prices may be a little better if sunshine is plentiful. There is nothing better and more cheerful to Pittsburghers than plenty of sunshine. It creates enthusiasm and brings everybody out doors.

Violets are moving lively and are cleaned up every day, and lots more could be used. Lilies are still bringing good prices and those that can keep them back for Easter and a few weeks after will get very high prices, as everything in the bulbous line will be like last year's calendar — amongst the things that were. There was a good supply of shamrocks for March 17th.

ROSE GENERAL MACARTHUR

General MacArthur is a cross between Marquise de Litta and a seedling of unknown parentage. It has shown perfect hardiness at 10 degrees below zero, is extremely free in bloom and vigorous in growth, and the introducers consider it one of the grandest bright red roses for bedding as well as one of the most easily handled roses for winter forcing. They claim that for the average market, it can be grown to

better profit than any other red rose, being especially valuable for the small grower who needs a red rose for his own trade, as the best grade bloom can be produced at night temperature of 53 degrees. Its color is crimson scarlet, brighter than any forcing rose yet in commerce.

General MacArthur was originated by E. G. Hill & Co., and was sold by them to Storrs, Harrison Co. in 1900, and introduced by Messrs. Storrs, Harrison Co. and J. N. May in 1904.

BUSINESS CHANGES

Lubliner & Trinz have opened a second store at 176 State Street, Chicago.

The Rhinebeck Violet Association has been incorporated to do business in Rhinebeck, N. Y.

Summit Park Floral Co., is the name of a new establishment at White Plains, N. Y., with M. Conroy, formerly of Fall River, Mass., as manager.

Lambros Floral Co. of Alliance, O., was organized with a capital stock of $50,000. J. C. Moninger Co., Chicago, has the contract for the entire new range of 70,000 feet of glass.

A. Samuels, 718 Wells St., Chicago, has sold his stock and fixtures to H. Lundgren who will continue at the same stand. He has leased the store and greenhouses for a number of years. This is the old Blaemeuser place.

Outdoor Art and Craft

E. W. Breed of Clinton, Mass., has been reappointed forester of the Massachusetts Highway Commission.

Brown-tail moth nests have been discovered in Worcester, Mass. This is their first appearance so far to the westward.

The town of Revere, Mass., has appropriated the sum of $1,000 for the extermination of the gypsy moth. Everett, Mass., has voted $450 additional to the former appropriation for this purpose.

The Salem (Mass.) *Daily News* has been conducting a "Brown-tail Moth Contest," the prizes to be awarded to those bringing in the greatest number of nests. Up to date nearly half a million nests have been delivered and the end is not in sight yet.

Boards of Health in many of the cities and towns of eastern Massachusetts have taken action, declaring the brown-tail moth to be a nuisance and menace to health and have called upon all owners and occupants of private premises to remove and destroy all gypsy and brown-tail moth nests on trees and shrubs within their respective territories. The law provides a fine of not more than $20 a day for disobedience of such orders within a resonable time after notice has been given.

The Metropolitan Park Commission is criminally negligent of its duty so far as fighting the gypsy and brown-tail moths within the limits of its own jurisdiction is concerned. We are informed that the trees on the Waverley Oaks reservation are infested with these pests. Of very little avail will it be for those who live in that vicinity to spend time and money on their estates clearing them of nests and eggs of the brown-tail and gipsy moths when the State is so regardless not only of its own but of contiguous property as to permit the hatching out and dissemination of the nuisance without any attempt to hinder them. The Park Commission can perform its best public service by properly caring for the property under its charge. — Waltham (Mass.) *Press Tribune*.

CATALOGUES RECEIVED

A manual on the propagation and cultivation of the peony, by C. S. Harrison, York, Neb., is a 64-page pamphlet that all peony lovers should have and read. Every question that is likely to be asked about the peony, its characteristics or its culture, is answered in a simple, familiar style by a man who is very evidently in love with his subject. The price is 30 cents.

The William Scott Co., Corfu, N. Y., Chrysanthemum Price List for Spring, 1905. A pocket pamphlet, listing a selection of useful commercial varieties. The Wm. Scott Co. advertises in HORTICULTURE.

Lager & Hurrell, Orchid Importers and Growers, Summit, N. J. Illustrated and descriptive catalogue and price-list. Contains seventy beautiful half-tone illustrations of choice orchids. The prices quoted are enticingly moderate.

HOW DO I DO IT?

MY MAN IN JAPAN IS A GREAT HELP TO ME

THREE years ago, with the idea of informing our growers in Japan of the kind of Lilies *we did not want* in this Country, we sent in a Wardian Case by quickest possible transit, growing samples of the two useless kinds of Lilies, the large percentage of which have proven such a NUISANCE IN ALMOST ALL SHIPMENTS FROM JAPAN, EVERY Lily grower knows them to his sorrow (the kinds which grow from four to six inches high and never produce a perfect flower). These arrived in full foliage at OUR LILY FARM IN JAPAN and our grower there immediately set to work to exterminate these WORTHLESS TYPES so that we can now supply OUR OWN SELECTED STOCK of

LILIUM MULTIFLORUM and LILIUM GIGANTEUM

All orders received and **accepted by us prior to May 1st, will be carefully selected, packed and marked for said consignee and sent direct from the Custom House Via our New York Office, 17 West Forty-second Street,** and if you give your order to me you may rest assured that you will receive as good stock as it is possible to supply. We also feel safe in recommending our selected stock of Bermuda **LILIUM HARRISII** for early forcing and **DOEII** and **BERMUDA LONGIFLORUM** for Easter.

Kindly consider the following testimonials together with the fact that ***we have yet to receive our first complaint from anyone supplied*** by us ***with Lily Bulbs last year.*** Prices and full particulars on application. Correspondence solicited.

WM. P. CRAIG, Importer—Exporter

PLANTS—BULBS—SEEDS **1305 Filbert Street, Philadelphia**

WASHINGTON, D.C., March 9, 1905.
Mr. Wm. P. Craig,
1305 Filbert St.,
Philadelphia, Pa.
Dear Sir; — We are pleased to state up to this time the Lilium Multiflorum and Lilium Giganteum purchased from you last season *are better than any that we have received.* We remain,
Yours truly,
A. GUDE & BRO.

MERION, PA., March 10, 1905.
Mr. W. P. Craig,
Dear Sir; — Your letter of inquiry in regard to condition of lilies obtained from you received.
This year I purchased my bulbs from several sources, — all reliable houses, and all guaranteed to be first class, — I have kept them all separate and to-day the ones obtained from you had all the rest beaten. *I wish you had furnished them all,* another season you shall.
Very truly yours,
HARRY I. FAUST.

RUTHERFORD, N. J., Feb 28, 1905.
Mr. Wm. P. Craig,
1305 Filbert St., Philadelphia, Pa.
Dear Sir; — In reply to your inquiry regarding the shipment of Lilium Giganteum received from you, would say same have turned out *entirely satisfactory* and you may figure on a large part of our order next year.
Yours very truly
JULIUS ROEHRS CO.

PITTSBURGH, PA., March 16, 1905.
Mr. William P. Craig,
Philadelphia.
My Dear Sir; — I am very well pleased with the Japanese Lily bulbs I got from you this season; am now getting them ready for Easter, and they look splendidly.
Very truly yours,
WILLIAM FALCONER,
Supt. ALLEGHENY CEMETERY.

PHILADELPHIA, PA., March 10, 1905.
Mr. Wm. P. Craig,
1305 Filbert St.,
Philadelphia.
Dear Sir; — Replying to your inquiry as to result of Lilium Giganteum, they were entirely satisfactory. You may book my order for 3,500, $\frac{9}{10}$ as per your quotation, to be delivered October 15.
Respectfully,
WILLIAM C. SMITH.

WEST PHILADELPHIA, March 13, 1905.
Mr. Wm. P. Craig,
Dear Sir; — While visiting Mr. August Muller's greenhouses the other day I noticed his fine lot of lilies. The bulbs I understand were furnished by you. Kindly call on me for next season's bulb order and oblige,
Yours very truly,
WM. DIDDEN.

PHILADELPHIA, March 17, 1905
Mr. Wm. P. Craig,
Dear Sir; — The Lilium Multiflorum and Lilium Giganteum have developed the best we have had for many years. Kindly call and see me in regard to next season's orders. Can use about 3,500 of them.
Very truly yours,
J. WOLFF, JR.

YOUNGSTOWN, O., March 11, 1905.
Mr. Wm. P. Craig,
Dear Sir; — We are pleased to report that the Lilium Multiflorum, received from you last Fall, have turned out exceptionally fine and true to name. At present writing they are as fine as any we have ever grown, and will be just right for Easter.
Yours respectfully,
WALKER & MCLEAN.

PHILADELPHIA, March 2, 1905.
Mr. W. P. Craig,
Philadelphia.
Dear Sir; — The lily bulbs I received from you last Fall have turned out the best I have ever grown and I want to place my entire order with you for next season's supply. Hoping all your orders were filled as well as mine, which should be a big card for you, I am,
Respectfully,
AUGUST MULLER.

BABY RAMBLER

(MME. NORBERT LEVAVASSEUR)

THIS sensational new French Rose is beyond doubt the most valuable acquisition ever introduced. It is in a class distinctly its own, has no competitors and is destined to become the best selling Rose in existence. It is the result of a cross between *Crimson Rambler* and *Gloire des Polyanthus*. It preserves the prolific flowering quality of the latter and has the color of Crimson Rambler, clear, brilliant, ruby-rose. When fully developed it reaches a height of only 20 inches. It has the foliage and hardiness of Crimson Rambler, but is absolutely free from mildew. Small plants from 2½-inch pots bloom profusely, indeed it is impossible to keep this great rose from flowering. It is indeed a perpetual blooming, dwarf Crimson Rambler. What a gem for edging, what a gem for the window garden and conservatory, what a beauty for the small Rose bed, what a magnificent thing for a dozen purposes! Every Florist should have a large stock of this Rose. The greatest bread and butter variety yet introduced. We will fill orders in the rotation in which they are received, and notwithstanding our stock comprises many thousand plants, the demand promises to exceed the supply

PRICE: 2½-inch pot plants. April 15th delivery, $2.50 per doz., $17.50 Per 100, $150 per 1000

WE have also in stock upwards of 1000 different varieties of Roses of various sizes, including all the new and popular varieties, as well as old stand-bys. Send to-day for

OUR NEW GUIDE TO ROSE CULTURE FOR 1905

This handsome catalogue is replete with half-tone illustrations and lithographs, and describes this great collection of Roses, as well as a complete list of Hardy Shrubs, Vines, Perennials, Violets, Chrysanthemums, Carnations, Cannas, Miscellaneous bedding plants, Geraniums, Lilies, Flowering Bulbs, Fruits, Flower and Vegetable Seeds. Send us your list for quotations.

ST. PATRICK'S DAY IN CHICAGO

March 17th was a strong factor in giving strength to the market. This was due, in part, to the wisely-directed efforts of the retail dealers. There were "Shamrock imported from Ireland," "The only real shamrock in the city," etc. It takes such men as Mangel, Rowe, Lang to bring out the full meaning of *true*, *truest*, and *only true*. These "past-masters of the art" back up their talk by their fine show windows. At Mangel's a fine window of eastern shamrock was the cynosure for passers by. Shamrocks in shamrock-shaped pots was a leader with A. Lang. Harry Rowe who has the decorations for the Irish Fellowship Club's big banquet at the Auditorium (over 500 large pots of shamrock are used for this occasion) had a pretty bank of shamrocks filling his large show window. Bohanm & Conger had a novel display, an immensely large "Fish hook" cactus, about 18 inches in diameter. This beautiful plant was studded with dendrobiums around the sides and top, which showed off as a monster cactus in full bloom. The most artistic window appropriate for the day was at Fleishmann's — an Irish harp, 6 feet high, made of lencothoe leaves, on a base arranged with the same material in sprays, and draped with green ribbon. Sunrise roses and mignonette in vases, and Asparagus plumosus in heavy strings were lavishly used, the whole culminating another pretty conceit in color effect by G. Wienhoeber, who is the manager and artist for Fleishmann.

Edwin B. Lewis has been appointed receiver for Wm. L. Rementer, Lansdowne, Pa. Rementer has "left for parts unknown."

The final report of the World's Fair Flower Association which was organized at Chicago for the purpose of making a chrysanthemum show at the St. Louis Exposition last fall has been made. It shows expenses of $8,432.21 and receipts of $9,889.55, giving a dividend of 20 per cent to the guarantors.

This unique souvenir is sent out by Kroeschell Bros., 47 Erie St., Chicago, the popular manufacturers of hot water

boilers for florists' use. It is made of heavy water-proof card. Send for one and kindly mention HORTICULTURE.

NEW YORK V. HOBOKEN.

The bowling aggregation of the Hoboken, N. J., florists came over, as agreed, and tackled the New Yorkers on their own alleys on Monday, March 20. Sadder and wiser they sought the ferry boat a few hours later. Three games had been played, New York winning all with 438 pins to spare. Theodore Lang won a Waterman fountain pen offered by Philip F. Kessler, with highest score, 234.

DON'T LET YOUR ROSES MILDEW

USE THE PEERLESS SULPHUR BLOWER

EVERY GROWER SHOULD HAVE ONE. Will sulphur a house 200 ft. long in 5 minutes. Distributes equally well Lime, Slug Shot, Tobacco Dust, Paris Green or any powder. Circular with testimonials on request.

If your seedsman does not handle it, order direct. PRICE $4.00 F. O. B. CHICAGO.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds. Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition. They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅜- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

NATICK, MASSACHUSETTS

Select List of Hybrid Perpetual and other ROSES

FOR OUTDOOR PLANTING

The Roses which we here offer are field grown stock either American grown or plants that have been imported from England and Ireland. We handle no Holland grown Roses.

These plants were all potted up into 5- and 6-inch pots, according to the growth of the variety, during December and January, stored in cold houses so that they break away naturally, making this the best possible stock for selling to the retail customer.

Roses with Long Canes

We can supply Marechal Neil, Cloire de Dijón and Crimson Rambler in 7-inch pot-grown plants with canes about 8 feet long at $1.25 each.

NEWER VARIETIES OF ROSES

FOR OUT-DOOR PLANTING

FRAU KARL DRUSCHKI
New White Hybrid Perpetual Rose

This new hardy Rose is of German origin, and was first disseminated in 1900, and has since won many prizes and made many friends. It is the IDEAL HARDY WHITE ROSE. Its flowers, which are very large, are perfect in form and snow-white in color, with large shell-shaped petals, forming a beautiful flower. The plant is a strong, vigorous, healthy grower.

Strong two-year-old plants, $3.50 per doz.; $25.00 per 100.

NEW RAMBLER. PHILADELPHIA

A cross between Crimson Rambler and the Hybrid Perpetual Victor Hugo, it differs from the old variety in being of a much deeper, brighter and more intense color which never fades out, perfectly double to the centre. It will not only prove a valuable addition to our hardy climbing Roses, but for forcing purposes for Easter we feel certain that it will entirely displace the Crimson Rambler.

Strong two-year-old plants, $3.00 per doz.; $25.00 per 100.

PAUL'S NEW SINGLE CLIMBING ROSE
Waltham Rambler

An unique and charming single flowering Climbing Rose with extra large clusters of deep pink flowers, with lighter centre and golden anthers as dainty and pretty as can be; it is of English origin, and has attracted much attention during the past two seasons at the various exhibitions at which it was shown. The plant is of strong vigorous habit, absolutely hardy, and a most excellent variety to plant wherever a strong climber is desired; the pretty single flowers produce a pleasing and brilliant effect entirely distinct from all other types.

Extra strong two-year-old plants, 50 cents each; $5.00 per doz.

NEW HYBRID TEA ROSE, IDEAL

A "sport" from the favorite La France, which it closely resembles in every way except color, which is a bright deep pink that does not become "washed out" even under the most unfavorable conditions. The plant is a strong, vigorous grower, very free-flowering, flowers of good size and deliciously scented, and we believe it will become even more popular than its famous parent both as a forcing variety under glass as well as for the open ground. An ideal rose in every respect.

5-in. pots, 30 cents each; $3.00 per dozen.

GRUSS AN TEPLITZ
The Famous Crimson-Scarlet Bedding-Rose

Introduced some five years ago, this reddest of all red roses has grown more in popular favor each year, and to-day is probably the most valuable high-colored, hardy everblooming rose we have. In color it is of the richest scarlet, shading to a velvety crimson as the flowers mature; of good size, very fragrant, a free grower, and most profuse bloomer, it being phenomenal in this respect. We offer strong plants.

4-inch pots, $2.00 per doz.; $15.00 per hundred.
5-inch pots, $2.50 per dozen; $20.00 per hundred.
4-inch pots, $2.00 per dozen; $25.00 per 100..

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencillings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Encourage the Natural Idea in Rural Parks

Often the beauty and harmony of a fine piece of woodland and meadow is spoiled in the process of its construction into a park for public use. Unnecessary roads, bridle-paths, and foot-paths are obtruded into view, as though the chief end and aim of park making were for their exploitation.

Stretches of natural beauty frequently are intruded upon by the erection of greenhouses or other structures for plant growing; or, maybe a zoölogical garden with its buildings, fenced enclosures, cages, etc., is thrust into the foreground of what, otherwise, would be a pleasant, retired, and restful valley. The planting of exotic material, too, is very destructive of naturalness in rural parks.

In the creation of a rural park from a piece of ground possessing good natural advantages in wood and meadow, let the dominating feature of the ground be followed or emphasized. In the laying out of roads and paths, keep in mind the fact that they are simply a means to an end, and are only to be carried when absolutely necessary, and always, if possible, within the edge of the woodland: avoid constructing them across open lawns or meadows. Let the bridle-paths be simple trails through the woods.

"Let the bridal paths be simple trails through the woods."

"A flock of sheep lend a pastoral effect."

Generally speaking, the borders of the park should be heavily belted with trees, and well floored with undergrowth of native shrubs. In this way, seclusion can be given to the interior of the park, where there should be open stretches of meadow, to which a flock of sheep would lend a pastoral effect.

Let all planting be done in entire harmony with the existing growths and conditions. With the wealth of beautiful material we have at hand in our swamps and woodlands there is, certainly, no excuse for planting exotic trees and shrubbery which will not blend with those conditions.

J. A. Pettigrew

Impressions from the Rose Show

The exhibition of the American Rose Society may be characterized as a success in every way. After making due allowance for the enthusiasm of a professional rose grower who had the opportunity of viewing the show amid a delighted assemblage of spectators, I believe it can be truly said that it was the most complete display of the rose in its various types that has ever been held under the auspices of the society. This in itself is very gratifying to its friends, as it has been in this respect that former exhibitions have been lacking, rather than in the quality of the exhibits themselves.

It is believed that by having the meeting of the society in Boston again next year the rose will be shown in still better form, and then it is hoped that, after the standing of the society is firmly established, the western growers will muster up sufficient enthusiasm to attract the meeting to their part of the country. At the present time for some unexplained reason there appears to be a misunderstanding among the cut-flower growers as to what ought to be done to further the best interests of the rose; but there is not the slightest doubt in my mind that before the meeting in March, 1906, these differences of opinion will be completely adjusted.

Of course it is thoroughly understood that western growers are not in a position to make an extensive display of hardy roses, but that I consider their misfortune, for I have no reason to believe that the general public in the West is any less appreciative of things beautiful than is that of the East. While the schedule and prize list in general would have to be rearranged, still with their immense area of glass they could give a display which, although lacking in variety of types of the rose, would nevertheless be interesting to both the grower and the public, and which for quantity and quality could not be excelled.

The great difficulty in the way of harmony between the different sections seems to be that the number of rose growers are very desirous of imitating to the minutest detail an organization which at the present time is the most flourishing that is devoted to any single floricultural interest in this country.

Now it seems to many of us that the chief lesson to be learned from the recent meeting of the Amer-

ican Rose Society, is that the methods which have been the most serviceable in booming the popularity of one flower are not applicable *in toto* to furthering the interest of a flower which, in all its various forms, ought to have a very much more extended field of usefulness than the mere production of cut flowers under glass. Therefore it is suggested that a combination of about equal parts of the following would make a desirable whole. One part of the hustle which is characteristic of the members of the aforementioned association; one part of the methods of operation of the same; one part of the objects and purposes which are represented by the National Rose Society of England.

After attending the meeting of the Society and later mingling with the great crowds of admiring flower lovers, listening to their expressions of approval of the magnificent display of out-door roses, I have come to the following conclusions. It would be suicidal to the success of what is supposed to be a national organization to ignore a class of roses which appeals so strongly to the public; and this, too, simply because some sections of the country have not the interest in out-door roses which they surely will have when there is a greater variety in the types of roses suitable to the different environments.

I do not mean to say that the display of hardy roses and forcing roses ought to be held always at the same time. It might in some cases be advisable to hold one or even several exhibitions of garden roses in different localities during the month of June, and to have these shows sanctioned by the national society and conducted under the direction of its local representatives. But I do mean to state that I believe it would be bad policy to deliberately discourage the holding of rose shows where nothing but a few staple forcing varieties were displayed.

As for the exhibition itself, it may be divided into the cut-flower class, represented by the teas and hybrid teas; the hybrid perpetuals in pots, and the hybrid perpetual blooms singly in vases; and the hardy climbing roses of the rambler type.

In the cut-flower section American Beauty was as usual the first attraction. While the number of entries was less then on some former occasions, the quality was fully up to the standard, as will be understood when it is stated that the winning vase received three separate prizes, representing three hundred and twenty-five dollars in value.

Bride and Bridesmaid were shown in quantity and average of excellence higher than ever before.

It was the opinion of the growers present that in these two varieties the display had never been equaled.

Liberty was in fine form and, next to Beauty, seemed to be the favorite with the public. While the leading prize went to a visitor, the vases were all of a high average, and certainly made an excellent showing for the red division.

Mrs. J. P. Morgan and Mrs. Oliver Ames were both represented by fair samples which showed what can be done with the short-stemmed class.

President Carnot was present in first-class shape for so early in the season, and was a center of attraction for the ladies. No good samples of its running-mate Kaiserin Augusta Victoria were in evidence.

Golden Gate and Ivory were good blooms, but these varieties have never been popular in Boston. This fact is regretted by the growers, because from their standpoint it has most of the good qualities of a money-maker.

A fine vase of Queen of Edgely was staged, but this variety does not yet seem to have attained any great degree of popularity.

Among the older roses, which gave pleasure to many, were Madame Hoste, Bon Silene, and Safrano. Madame Hoste was magnificent and was pronounced by many experts the finest they had ever seen.

The new varieties were fairly well represented, but not in general, in as good form as they undoubtedly will be in another year.

Richmond it is hoped is the long looked for red. It has been staged in much better form in Boston, but even as shown it has demonstrated its ability to take a leading part among the reds. Indeed if it is only half of what is claimed for it, it will certainly displace Liberty in many rose-growing establishments.

Wellesley can be shown better, but still it proved very popular with the public. It will certainly make Madame Chatenay hustle for a place on the market during the coming season.

Killarney appears to have too wide a variation in color to suit the critical buyer, but the bud is certainly the ideal shape, and it will surely be called for on this account if for no other.

La Detroit in some respects ranks with Beauty. Its chief defect in the estimation of the public is its lack of distinctiveness in color.

General MacArthur although it cannot be classed as a fancy red, will probably be used by small growers in place of Liberty.

Uncle John is an improved Golden Gate, and as seen side by side with its parent it ought to displace it.

Madame Abel Chatenay, like some of the noted rose-growers of the country, was a prominent absentee.

From such a display as this, then, I am led to conclude that each succeeding year will bring forth its share of newcomers, and it ought not to be very long before rose growers will have a good selection in all the various colors, so that they may choose varieties best suited to local requirements.

The hybrid perpetuals in both single blooms and pot plants were well represented. The only new variety of importance was the beautiful white rose Frau Karl Druschki. It is a magnificent variety, and is unapproached in its class for absolute purity of color. The display of the rambler type roses was considered by visitors to the show as one of the star features. Among the most striking varieties shown may be mentioned Baby Rambler, red, double. The Farquhar Rose, deep pink, very attractive, fine foliage. Wedding Bells, flushed pink, semi-double. Hiawatha, single, red. Gaiety, pink. Delight, single, red. Sweetheart, good double white, fine glossy foliage. Débutante, blush white. Lady Gay, undoubtedly the finest of its type yet produced. Flowers are pure bright pink, uniform in color, and borne in enormous clusters. There is nothing equal to it in its class, and its raiser deserves the thanks of all true rose lovers. It is on such varieties as this that rosarians pin their hopes for new races that will give the rose its rightful place in the American gardens of the future. It is extremely gratifying to the horticultural interests of Boston to know that they were instrumental in being the first to give the public an opportunity to admire such beautiful examples of the gardeners' art.

Alex. Montgomery, Jr.

South American Horticulture

IV. SAO PAULO

At the nurseries of Mr. Dietsch in Sao Paulo, mentioned in last week's notes, gladioli are planted three times in the one round of twelve months, coming in at all times. With dahlias it is the same. Also a continuous crop of roses is now practically assured, since the rose grower of Mr. Dietsch, who had a good experience in Italy, has found out just what varieties are best suited for the climate. This gentleman was very confident that his new grafted hybrid teas, numbering about 5,000, of various varieties, would give him an even continuous supply of well-developed flowers all the year around.

The only insects which become troublesome for outdoor culture of cut flowers are the grasshoppers, of which there are about half a dozen varieties of different size and colors, the largest as big as your hand. Besides their long springy legs, six inches in length, they have a double pair of wings, on which they sail away from the danger of any inquisitive five fingers. After all, the gardeners get the best of them by going out at six o'clock in the morning, with the temperature just about freezing, between 32 and 40 degrees, armed with a pair of scissors. The hoppers at that time, from cold, are unable to fly, and are cruelly and remorselessly clip, clip, clipped in two halves. Of the much feared ants, Brazil's greatest drawback to agriculture and horticulture in general, the nursery had none to house. Generally they prefer cultivated plants instead of forest plants, and make their appearance not until some years after woodlands have been cut down and taken under cultivation. The land of the nursery had been uncultivated for some years, and had developed a thick growth of bush and young trees which had been cut and burned down, and this probably had destroyed the ants, if there had been any on the land.

Mr. Dietsch grows most all modern garden and greenhouse plants of the latest varieties, as do the other two or three florists of Sao Paulo. The palmhouse consists of three rows of brick pillars, that in the center being twice as high as the outer rows, upon which foundation rests a ridged screen, made out of forty-foot bamboo splits. The bamboo is nailed two inches apart, thus giving shade enough and wind-break as well; it makes an ideal palmhouse, in which it is not necessary to look after your plants at all, as the rainfall reaches the plants through the bamboo screen often enough to keep the tubs and pots moist. Only after exceptionally long spells of dry weather the tubs and pots are looked over and given a watering with hydrant-water. Orchids are housed precisely in the same manner, and only after a week or more of continuous sunny weather are taken down and dipped into a big cistern in the house, in which the water keeps its high temperature from the previous day.

On the first occasion I visited again the public park — Jardin da Luz III — opposite the depot of the Santos-Sao Paulo railway. I have spent nowhere evenings with such an artistic garden atmosphere around me as in this park. I entered about the time the concert was to commence, eight o'clock. The whole grounds, in the vicinity of thirty acres, were well lighted-up by numerous electric arc-lights, throwing into the evening landscape all the gracefulness of immense palms and tropical plants. Along the broad walks are white marble seats, finely polished and on artistic basework; all gutters are of gray granite. You touch the leaves of arecas or dracænas, or araucarias, as you pass through a narrow path over to another main walk, now leading you to the center of interest. Then with the crowd you turn around a last corner — a group of Cycas revoluta and reclinata, twelve feet and more in height, with smaller specimens around them — and behold the pond and the bandstand, where on the promenade hundreds of gay-dressed Brazilians show themselves in public. The pond has crystal-clear water, is shaped in a cross and set in white marble, and is filled with all sorts of nympheas, lotus, etc. Among them wade carefully, odd-looking storks, ibis, and herons. Out of the center arises a fine fountain, illuminated by the lights of several strong electric globes. The air is warm, but not hot, the ladies wear no hats, or only something which looks to the uninformed like a piece of white lace-curtain, just cut off for the emergency in leaving the hot city house. Gentlemen in white duck and white boots lead them from the promenade to seats under the open pavilion and around the tables near the bandstand, and order soda. There is plenty of room for all comers; all walk slowly and carefully, pushing and crowding being looked upon by the chivalrous Brazilians as extreme impoliteness. From the Italian street-boy, who sells "doce" — sweets — to the signorita, who can drive in an elegant carriage to the park concert, an artist could select perfect models of symmetrical bodies. The familiar music which the band plays, makes you feel somewhat at home in the unusual surroundings.

Everything in heaven and earth here seems to be reversed. January is the hottest month; at noon the sun stands in the north, so you have to go to the south side of trees to be in the shade; palms are common trees, but an oak or thorn you seldom find; canna, castor-oil bean, and the "wandering jew" are weeds, but a violet or a lilac are rare. It is difficult to realize that shrubs and trees you view as a foreigner with double interest, are to the Brazilian boy, who accidentally stands beside you, listening to Wagner and Strauss, his native plants and yard-trees, among whose branches he is at home. It is only by conversation with educated Brazilians that a foreigner can catch the spirit of tropical nature, its charm of forms and its tune of color, as I found out in later experiences.

Outside the gates of the public park, carriages of

the wealthy, and the electric car for the common citizen are waiting; with the well-known North American swiftness, the car made in St. Louis takes you home; the open car is closed in a rain-storm by curtains, but otherwise no protection is needed. No snow-plowing, no delays, or breakdowns on account of weather, in Brazilian cars. To ride on them is here wholly a pleasure trip along palm avenues, between gardens, among bananas, coffee-trees, oranges, and lemons.

In early morning, until 9 o'clock in the park is delightful. There is a fine, rock scenery with walks between steep rock walls and palm-foliage of such profusion as to darken the place almost, then suddenly you come to an opening where the sunshine lightens all and transforms a waterfall into streaks of gold and silver, against the red of rocks from which it is falling. Not far off is a bed of Yucca gloriosa in flower, the flower-shafts two yards in height, and very bright indeed amid the dark glossy foliage of tropical trees. The native trees belong to the classes of Lauraceæ, Myrtaceæ, Leguminosæ, and Ficus, and others. The last named arise to immense height, holding on to the ground with curious board-like roots, standing twenty feet above the surface, edgewise against the trunk.

Sao Paulo has several smaller parks and squares, and a larger piece of ground in front of the state house is even now prepared for a public park. In the suburbs are also several public pleasure gardens, belonging to breweries and coffee restaurants. In one of these I found two oaks and a few specimens of other northern deciduous trees, all about ten feet high, showing that only recently someone interested in horticulture had made an attempt to show to the native Brazilians a few samples of northern plants.

In southern Brazil I have noticed apple and pear trees, healthy and fruit-bearing, showing that our forest trees might be made to acclimatize themselves to warmer climates. This, however, applies only to Sao Paulo and the states south of it. In Rio de Janeiro, certainly the most interesting city of South America in regard to tropical horticulture, the climate is much warmer — in fact, tropical. I should think it useless to look around the gardens of that city for any northern apple or oak trees. Still it lies only twenty-five miles nearer the equator than Sao Paulo, the different climate being caused by the Sierra or Coast range of mountains, the last named city lying inland on the mountain plains, 2,000 feet above the level of the sea, while Rio de Janeiro on the ocean shore is far below the sweep of cooling mountain drafts, but is situated among radiating granite pillars, connected by long rock banks. Rio de Janeiro rivals any city on the globe for natural beauty, and what has been done there additionally, by human hands, we will see in another journey to gardens and parks on the famous bay of this city.

Gerhard Kleicken.

Cymbidiums

One of the finest sights for flower lovers is the cymbidiums in the greenhouses of Mrs. G. M. Whitin at Whitinsville, Mass., there being over eighty plants in seven- and eight-inch pots, seedlings raised by George McWilliam. These are a cross between Eburneum and Lowianum, for which Mr. McWilliam received a gold medal from the Massachusetts Horticultural Society and a silver medal from the Pennsylvania Horticultural Society. The plants are sending up many spikes, one having a spike over four

feet long, with eleven flower buds. One just opened was of large size, the basal sepals measuring over five inches long and one inch broad, the dorsal sepals over one inch, petals nearly one inch, and the lip one inch broad. The front is a brilliant crimson-maroon shade. All the other plants that have come in flower have the same lip of the Lowianum type, and the flowers have a diversity of yellow shades, some of a clear, distinct canary yellow, some darker, and others light brown or maroon. The fragrance resembles that of the narcissus, but not so strong. The flowers are fine for cutting for decoration, and last a long time.

A Practical Help

We hope you will like Horticulture and recommend it to your friends in the trade. We want to see on the list of subscribers every one identified with any horticultural industry. We draw no lines, but *invite you all* to help by your subscriptions, your contributions, and your approving words to make Horticulture the best known and the best liked professional journal in our country. Every $1.00 subscription sent in is a *practical help* to this end.

Plant Breeding for Profit and Pleasure

This paper is not intended for the professional or commercial plant breeder, but for those who have other employment, and could take up plant breeding and culture as a pastime and amusement, and also a possible profit and luxury. It is more especially addressed to mechanics, clerks, employees in factories, and farmers' children. The farmers' children are well situated for such work, and the others should strike for the country; get small places near electric or steam cars and convenient to their places of labor, where they can keep a cow, a few hens, and a pig to eat the weeds; grow their own vegetables and small fruits. In that way they will escape lots of adulterated foods. To have fresh eggs, milk, small fruits and vegetables is a luxury, and a guarantee for good health.

But this is not plant breeding, but paving the way to conditions necessary for plant breeding. After the above conditions are secured, one is in position to take on a little experimental work. He should learn to graft, bud, and cross by pollenating. I know of nothing more fascinating than the hybridizing and crossing of plants to cultivate and watch the development of the offspring. In this branch of plant breeding, the farmer and mechanic has an equal chance with the profession, for in most plants there are latent elements or characters that cannot be detected from any outward appearance; characters that in many cases belong to, or are descended from some remote ancestor; ancestors that were very much superior to those of their kind that we have now; and it is reasonable to suppose that at the time when vegetation and animals were making such mammoth growths, fruits were large in proportion, and that the wild fruits that we now have are but a degenerate remnant of a once nobler type. Were it not so, the improvement we make by cultivation and improved conditions would be more uniform, and the unimproved would be the exception, instead of the improved. In producing new fruits, it is only when those lingering characters of a once superior quality meet, that we get a decided improvement Those improvements, in many cases, are called sports or mutations; but they are, as I believe, the direct results of a union of the germ cells of some remote ancestor, hence, in hybridizing, the greater number of varieties that we put into a combination, the more likely we are to secure the union of some of those germ cells that have come down to us from a very remote period, so that anyone who makes a good selection for parents stands an equal chance with the profession.

For the benefit of those who may take my advice and go to the country, and for those who are there now, I will give my method of growing strawberries, which is as follows:

Select a piece of ground, at least one hundred feet square; place the henhouse in the center, then divide the rest into three equal parts and so arranged that the hens can go into any one division and be shut out of the others. Plant the strawberries in one division and keep the hens in the other two, the first year. The second year, set another division to strawberries, and keep the hens in the still vacant division. This second year will furnish a good crop of berries. The third year, set a new bed where the hens have been and dig up the bed set first, and run the hens in that division, and keep up the rotation from year to year, and the hens will do all the work, will keep the ground clear of weeds and grass. All one has to do is to set a new bed every year and gather the fruit, and if the "Marshall" is planted, berries will be grown as large as the eggs that the hens lay. Such a bed will supply more berries that one family can use, and very cheaply.

I have spent half of my life as a mechanic and have run my place, as nearly as conditions would permit, on the above plan. I have kept through the summer, a cow on one-half acre of land in good condition. I live fourteen miles out from Boston, and for many years went there every day to work, and cared for my garden, hens, and cow, mornings and nights, which gave me just the outdoor exercise I needed.

R. B. White

Dipladenias at Whitinsville, Mass.

Not the least among the many good things grown here are the dipladenias, of which there are over forty varieties, all seedlings, raised by Mr. McWilliam, for which he has already been awarded one gold medal, one gold gilt, and four silver ones, although he has exhibited only a small proportion of the plants as yet. In substance and size of flower, they are a great improvement over the old varieties. The colors range from bluish white to deepest red; some have yellow throat, and some of the lighter-colored ones are of particularly beautiful shades.

The dipladenias flower from May to December. The plants are grown in rough peat or fern root, and when done flowering, are gradually dried off. They are then cut back to several eyes, repotted in fresh peat and clean pots or pans, and are again ready for a year's work. When in growth are never shaded (which is different from old time methods), and when full grown they cover one side of a house up to the ventilators, with their gorgeous flowers. The temperature is never permitted to go over 50 degrees with fire heat. One of the older varieties (Boliviensis), Mr. McWilliam says, is one of the best things to stand the sun in a house window, and he finds it very useful in this respect. The flowers are white, smaller than some of the others. After growth has advanced a time, liquid fertilizer is given, which greatly helps to develop luxurious foliage and flowers.

Wm. Swan.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

Diligence in business is always honorable and praiseworthy until it engenders the spirit of slave-driving; that's the limit.

Signs of rapidly approaching spring are in the air. For the nursery-man, the park-man and out-door gardener the campaign is on in earnest, and a short spring and a lively one seems to be the prospect.

Many of the seaside towns along the Massachusetts coast are considering the question of tree planting on their bleak, exposed shores. In early colonial days these wind-swept regions were covered with a heavy growth of pines and spruces and these can in time be replaced. It will take a long time to do it, but it is well worth the effort.

New Jersey's action in creating a State Forest Reservation Committee with authority to acquire large tracts of woodland for public holdings, is one of the most important acts in that State in many years and will have far-reaching influence. The wealth saved to the State will greatly exceed the cost of the enterprise, and the object lesson will not be without effect on other States that have hitherto been indifferent and even hostile to such investments.

As an adjunct to the suburban or village florists' work in tender material the hardy shrub and herbaceous plant business should now prove extremely profitable. The florist in such communities, where gardens are possible, has, if wise, not been unmindful of the rapidly changing taste, and will take a good share of the time heretofore given to the bedding plant and devote it to acquiring a selection of the more popular things in hardy material. The demand for such although already large is yet only in its infancy.

The salutary influence of a good example is seldom more strikingly exemplified than in the matter of home-gardening. Given an unkempt and utterly barren community, it needs only that one individual shall improve his home surroundings with lawn and flower-beds and trees, and the dormant love for such things will quickly awaken all through the neighborhood. And once begun the tranformation will go farther bringing into the home itself and its occupants that measure of tidiness and comfort which the well-kept garden suggests should be found there.

The rosarians, in their meeting at Boston last week, attributed the decadence of the rose to the disappointments resulting from improper stocks, high budding, swamp-grown Dutch material, and lack of common knowledge of the reliable hardy varieties. The remedies suggested were the imposition of higher specific duties on imported roses, the encouragement of American production, and the dissemination of practical information regarding roses and their culture. If by these means the successful rose-garden may be made possible as a feature of the American cottage garden, then activity along the lines suggested are in order. Get busy.

An element of danger seems connected with the offering of prizes for children's herbariums, as is done by some of our horticultural societies and schools, in that it means the persistent searching for and picking or uprooting rare forms of our native flora and tends to their ultimate extinction. The educational value of nature study carried on by this means is not equal to the devastation it must cause. In these days of kodaks the herbarium can well be dispensed with, excepting for scientific record. Children should be encouraged to cherish and protect rather than to kill out the little colonies of wild flowers which their inquisitive search through the fields and woods may disclose.

What shall we do about the moth pestilence which is now rapidly spreading over the New England States and will soon extend its devastating work over the entire country? Extermination of either gypsy or brown-tail is now an impossibility, and the destruction of millions of dollars worth of property is inevitable. Three years' visitation means sure death to the toughest tree. Many cannot withstand even that! Yet there are individuals everywhere who refuse absolutely to do anything to cleanse their own premises and thus render useless all that their neighbors may do to abate the evil. It looks as though compulsory legislation must be resorted to and some comprehensive plan adopted for the coöperation of national, state, and civic authorities, and the individual, in the fight against this epidemic. It is a public evil which the public must combat, and the sooner the matter is taken seriously in hand the less it will cost.

The rapidly growing appreciation of hardy ornamental planting about the home grounds has brought unforseen business to the nurserymen to such an extent that they find it impossible to meet the demands on many staple lines. Much of the Holland-grown material brought to this country is so soft that it is unfitted to withstand the climate after being planted out here, and it looks now as though it might be a number of years before home-grown stock will be in sufficient supply for such uses. Looking to the future, however, when competition may be expected, the dealer in ornamental nursery stock cannot do anything more to his ultimate advantage than the laying out of a section of the grounds in permanent plantings of the different varieties, arranged to display them in their most attractive light. Some nurserymen are going even farther and plant much of their regular stock of ornamental shrubbery in groups instead of the customary nursery rows. The effect of this object lesson on the purchaser cannot be other than impressive and a better price can usually be got for specimens so displayed.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

I congratulate you on the size and beauty of last week's HORTICULTURE. — S. J.

I am very pleased with the general style, make-up, and contents of your publication. You certainly deserve the fullest support from the craft for whom you are so efficiently catering. — W. A.

DOINGS IN NEWPORT

Spring has at last set in and with it the inevitable rush of all horticultural work. Every man is busy; some with business now in hand and others in preparation for a great amount of business in the near future.

The dahlia men are confident and enthusiastic as ever and in this line Catherine Duer is still in the foreground, but pressed hard from behind by debutantes from the cactus family.

In a favorite corner in every greenhouse establishment, large and small, can be seen Nicotiana Sanderæ. Every one is growing it and great are the hopes concerning it. Time alone will tell whether or not these hopes will be realized.

Nephrolepis Piersonii and N. elegantissima are bought and placed beside Nephrolepis Scottii. They seem to get along very well together. Scottii is no match in stature with its companions, but is fully as vivacious and spunky, and for these reasons will not likely take any back jaw. "Nemo me impune lacesit."

There were many purchases made of Pandanus Sanderæ about a year ago. Most of the plants bought were small, and disappointed many in not having much of their golden color, but now as these plants attain size, they are showing this characteristic in a marked degree. They are also showing something else they for some time failed to show — namely, suckers, These are quite numerous now on plants in 6- and 8-inch pots.

Mr. Eugene Hughes has been awarded the contract for the care of the city parks and playgrounds. Mr. Hughes is handicapped in not having any glass of his own; yet he is such a hustler that year after year he is able to underbid those having glass wherein to grow the plants for the parks. Mr. Hughes buys of them, however, therefore all are happy.

Some people might think HORTICULTURE's illustration of the Farquhar rose was a little exaggerated, but to any one seeing it growing in Newport last summer there was no exaggeration in the picture. The Farquhar rose is a beautiful as well as an extremely useful thing. It holds its flowers long and is a rapid grower, besides flowering fully as profusely as any of its class. There ought to be a great demand for it from people in different circumstances.

CHICAGO NOTES

F. Lautenschlager is visiting New York this week.

James Hartshorne, manager of the Chicago Carnation Company, Joliet, Ill., has returned from his trip east visiting Philadelphia, New York, and at the Rose Show in Boston. Mr. Hartshorne arranged a carnation deal with J. E. Haines, Bethlehem, Pa., his company acquiring a half-interest in the grand new red carnation, J. E. Haines. This variety scored 85 points at the American Carnation Show at Chicago. It was the object of much admiration at the Boston Rose Show.

GARDENING ELIZABETH AND THE SEED STORE.

About this season the seed shops hold out irresistible fascinations to the woman who loves the gentle art of gardening.

There are not two kinds of woman, but there are two moods in every woman; and there are days when a whole shopful of Paris finery wouldn't draw her like one of those prosaic looking stores where they keep seeds and garden hose and lawn mowers and insect-killers and such things.

"I'm going in to buy two dollars' worth of San Jose scale-destroyer," said one of these gardening Elizabeths. "It is to prevent scale on a tree that never has borne but one year in all its miserable existence, and probably never will. With this two dollars and what more I shall spend on my garden I could buy ten times the quantity of fruit and vegetables I shall need all summer."

Nevertheless, she fairly chortled with glee as she stepped over the threshold into the spic and span severity of the seed store, and there listened with shining eyes to scientific instructions on the correct usage of pest exterminators.

Of course, it takes an imaginative soul to see possibilities in the prosaic contents of a seed store. To some people dried peas are merely dried peas, a bag of grass seed is nothing more than chaff, and all the neat little packages of radish seed and lettuce seed and cucumber seed mean just nothing at all.

Not so to the woman who has gardening in her blood. Like a war horse eager for battle she sniffs hungrily around among these things.

Radish seeds are more than radish seeds to her. They are luscious crimson globes, already on her table of a warm spring evening. In a little paper of lettuce seed she can see rows of crisp and curly green heads under her hot bed sash. Every seed packet conjures up to her the smell of the earth, and the liquid chirrup of April robins, and the sweetness of blossom scents, and the tender greening grass on the front lawn.

"Wouldn't it be more reasonable if you were to to think of worms and weeds, and July suns, and pushing the lawn mower over that same green in grass," politely suggested a man to whom one of these gardening enthusiasts confided the foregoing raptures.

And she said hotly that of course it would not, and that if she stopped to think of that side of it she would probably never have any garden at all, and that it was usually the persons who persisted in dwelling on the gloomy side who never accomplish anything, anyway. Which rebuke the man took in so sweet and Christian a spirit that he was immediately promised the first pear — if there should be more than one — and also a share in the weeding.

There are drawbacks, to be sure; but you don't think of them in the seed store. Everything there is fair and inviting, and lures you straight on to financial ruin.

So that, if you've got a new dress or a spring hat yet to purchase, you'd better get it before you trust yourself among the fascinations of those stores where gardening seeds and tools are dispensed. — *Philadelphia Evening Bulletin*, March 13, 1905.

Bully for the *Bulletin*! That's the kind of talk a "Horticulturist" appreciates. Practical, well-written, inspiring; how much better worth giving space to than accounts of monstrosoties of the horticultural world, usually myths, which the average editor is generally in the habit of publishing. Let us praise them when they do well. A jolly is often more powerful to accomplish one's purpose than a knock! The daily press is a wonderful engine for good in horticulture if we only had the wit to make it run the right way. And the time is coming. I can see a great difference in comparing the present with the situation twenty years ago when I first became interested in the subject. — G. C. WATSON.

SOUVENIR DE PIERRE NOTTING

We are in receipt of a box of blooms of the new rose, Souvenir de Pierre Notting, from the Dingee & Conard Co. This is the variety so highly spoken of by Mr. Lynch at the last meeting of the Philadelphia Florists' Club. The buds are long and full, of good size, golden yellow, the edge of the petals beautifully tinged with carmine-rose. If all the other good points spoken of be as authentic as size, form, color, and fragrance, evidenced by the sample before us, this fine new Tea rose should become a popular favorite. It is of European origin and is said to be a cross between Maréchal Neil and Maman Cochet.

PERSONAL

Otto Gilles has taken a position in Wm. F. Kasting's Buffalo office.

D. Newlands, Buffalo, N. Y., is reported very seriously ill at his home

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Wm. H. Peirce of Lincoln is to build a new house for cucumbers this spring.

Burgess & Cooney, Maplewood, have just completed a small house 75×10 which they intend to use for bedding plants.

The general consensus of opinion seems to be that Boston added to her horticultural reputation at the recent rose show. All who attended assert it the best ever held in Boston.

Violet growers are throwing out plants preparatory to putting in stocks, etc., for Decoration Day. The damping off fungus has caused much loss of seedlings during the wet spell just passed.

It has been suggested that the two wholesale flower markets of Boston unite in an outing sometime during the coming summer. Boston is far behind other flower centers in the matter of social pleasures among the growers.

Asparagus,both Sprengerii and plumosus, have been in great demand this season. One grower tells me that at two-year old plant, set in a compost of two-thirds manure to one-third fibrous soil, with a top dressing of cow manure in the spring gives best results.

I have been observing a peak in the carnation line for the past month. A bloom of Flamingo was hybridized and the seed pod had formed and was about half grown when another flower bud pushed up along side of it and developed into a fairly good flower. If this is a habit of the Flamingo, it will be a great variety to grow for button-holes.

I notice an article in a daily paper bringing forward again the claims of the mountain laurel for the state flower. Personally I believe we can find a more suitable floral emblem for Massachusetts. Why not the carnation for both state and national? What flower is there in existence today which enjoys the immense popularity of this ever-present product of field and greenhouse. Anywhere from Provincetown to the Hoosac Tunnel can the carnation be obtained at any season of the year, while the mountain laurel is found in comparatively few localities. Ten years ago the modern carnation was in its infancy. Today more are grown than any other flower in the market, and ten years from now I hope to see the carnation the authorized floral emblem of the country whose people made it what it is.

THOS. F. MATTHEWS.

DON'T WORRY.

Don't worry 'bout de winter —
A-raisin' er a row,
'Spite er al you' cryin'
It's a-comin' anyhow!
Can't be allus summer —
Got ter come a snow;
Takes a sight er rainin'
Ter make de roses grow!

Don't worry 'bout de winter —
De summer tarried long.
You heerd a hundred mockin' birds
A-makin' sweetes' song;
De cabin fires'll warm you —
You'll trip it — heel-en-toe;
It takes a sight er rainin'
Ter make de roses grow.

Atlanta Constitution

American Rose Society

Annual Meeting and Exhibition — The Visitors Banqueted

The annual meeting held in the committee room of the Massachusetts Horticultural Society on Friday, March 24, was well-attended, there being nearly one hundred gentlemen present. After the reading of the president's address and reports of secretary and treasurer as described in our issue of last week, M. H. Walsh of Woods Hole, Mass., read the paper on hardy roses, which we present in this number. A question as to which are the best six hardy roses for the New England States brought out a very interesting discussion.

Mr. Walsh recommended for Hybrid Perpetuals, Baroness Rothschild, Clio, Ulrich Brunner, Prince Camille de Rohan, Baron de Bonstetin, and Capt. Hayward; for Hybrid Teas, Capt. Christy, Caroline Testout, Kaiserin Augusta Victoria, La France, Maman Cochet, and Madam Abel Chatenay. Mr. Walsh is very much impressed with Madam Abel Chatenay as a hardy outdoor rose, having experimented with it for two years even to the extent of exposure without any protection, which is the true test of hardiness. For six good hardy ramblers he recommended Lady Gay, Daisy, Sweetheart, Farquhar, and Philadelphia Rambler. We have some very good sorts of American origin in this class. Manda originated six or eight good varieties. Dr. Van Fleet raised the Philadelphia Rambler.

Several present did not think Baroness Rothschild should be included in the collection of six H. P. roses. Mr. Wheeler said with him it lives, but does not grow, and recommended General Jacqueminot and Magna Charta. Mr. Siebrecht took objection to Magna Charta and says he treats this variety as a shrub, as only one crop of flowers is to be had from this sort, whereas the others named are perpetual bloomers. Mr. W. N. Craig recommended as six hardy H. P. roses, Mrs. John Laing, Madam Gabriel Luizet, General Jacqueminot, Ulrich Brunner, Paul Neyron, John Hopper, and in addition to Mr. Walsh's five best varieties of ramblers suggested Dorothy Perkins. W. J. Stewart said Carmine Pellar ought to be included in the list of best six climbers.

It was also voiced that the society should take some action to check the demand for Holland-grown roses and should persuade to have a higher duty placed on this article. Mr. Walsh said we cannot ship American rose stock direct to Holland; it must first go to England and then can be sent to other European countries. Our society can benefit the people by explaining that Holland roses are swamp-grown and not fit for this country. They are diseminated largely by department stores and prove only too dear in the end. This stock is not adapted to this country and cannot stand our hot summer seasons.

A resolution constituting a publication committee and authorizing the issuance of periodical bulletins of information pertinent to the rose, also an annual report by the secretary, was unanimously adopted. Benjamin Hammond offered to assume the cost of printing 10,000 bulletins and his proposition was accepted with a vote of thanks.

Boston was selected as the place for the next meeting and officers for the coming year were elected as follows: President, Alexander Montgomery; vice-president, Robert Simpson; treasurer, Harry O. May; secretary, William J. Stewart. W. N. Craig was elected to fill the vacancy caused by Mr. Simpson's election to the vice-presidency and Messrs. M. H. Walsh and A. Farenwald were elected for the regular three-year term on the executive committee.

M. H. Walsh's Exhibit of Rambler Roses at Boston

HARDY GARDEN ROSES

How the American Rose Society may promote and encourage the successful cultivation of these flowers by Amateur Rose Growers.

Read by M. H. Walsh before the American Rose Society at Boston, March 24, 1905.

A great deal has been written by eminent rosarians, and poets so often have sung the praises of the most beautiful of flowers, the queen of them all, the rose. This flower is pre-eminently entitled to this honor for the many purposes for which it is valued from the cradle to the grave.

It is cheering to note the awakening of a new and live interest which is being manifested by amateurs and others in the growing of hardy garden roses. The increased demand for these plants for the past five years is sufficient proof.

About twenty years ago the National Rose Society of England was organized, the aim and object of this society being to promote and encourage the culture of the rose and to disseminate practical information for the proper growth and cultivation of this flower. It is through the untiring efforts and the influence of this organization that the rose is so generally grown by the amateur and the cottager as well as by the wealthy class.

The American Rose Society is organized on practically the same principle, the aim and object being to promote a greater interest in the growing of the rose and to educate in its culture those who love the flower and desire to grow it.

The American Rose Society includes in its membership men the greater part of whose lives have been devoted largely to the growing of roses, and who by their wide experience are well qualified to give the information so many people desire in relation to rose culture. The amateur rose growers especially are seeking and anxious to receive such directions.

There are several essentials in the growing of roses. The first is the soil; this would apply in a general way. A large number who buy roses know nothing about what soil is best suited for these plants. This I know from my experience with purchasers. While they are often familiar with the varieties, they admit they know nothing whatever about preparing the ground. Hundreds of these people would be willing to become members of the Rose Society, could they receive some practical cultural directions concerning rose growing.

It is surprising how many buy roses and continue to buy and replace them simply through lack of knowledge how to properly care for them. They buy through love of the flower for its own sake. Many know not whether they should be planted on the north side or in a southern exposure. They are not familiar with and know practically nothing about pruning and properly guarding against insect pests. In fact, the large majority of those who buy roses year after year have but little practical knowledge relating to the proper care and the attention these plants require for successful growth.

It seems to the writer that the Rose Society should give practical cultural directions and instructions to those seeking such, and begin and educate the masses who are interested in roses. This could be done by publishing a practical treatise on the rose for the amateur, or could be issued in the form of a bulletin to all members of the society

When this became known I believe the membership would rapidly increase and the bulletin, if found desirable, could give information applicable to all points of this country. There are members well qualified in the different sections of the country to give the practical cultural directions treating on soil, situation, pruning, selection of varieties of Hybrid Teas, Hybrid Perpetuals, Japanese and their hybrids, climbing roses, Rambler roses, and their various uses.

This matter wisely followed up would make the Rose Society the official organ, the recognized authority on all matters relating to the rose. At the present time the society may not be ready to take up this matter or approve of these suggestions, but I feel sure they will receive their earnest consideration.

The Carnation Society is prosperous, and the grand results in the increasing popularity of this flower, the perfection of the blooms in color, size, and texture are surprising and gratifying. The Chrysanthemum Society is prosperous and the wonderful advance in the development of this flower is marvellous. The Peony has also a society and they are formulating plans for the classification and correct naming of the varieties. These societies are to be congratulated for the zeal and perseverance and for the grand and noble work they have done in their respective spheres.

The Rose Society is waking to a realization of its duties which is gratifying, and the officers of the society have worked zealously the last year, and are entitled to the thanks and hearty coöperation of all its members. Let us hope that the interest now being manifested will stimulate our rose growers to produce new and superior varieties of American origin and better adapted to our climate.

May the good work continue and the rose always hold the honor and title of Queen of Flowers and the Garden!

Some of the Pot Grown Roses at Boston

THE BANQUET

The banquet given by the horticultural interests of Boston to the American Rose Society at Hotel Thorndike was attended by about one hundred and twenty-five ladies and gentlemen. The speakers' table was decorated with a beautiful centerpiece of rose Wellesley. The smaller tables at which the guests were seated in groups of six were also finely adorned with tall vases of roses on the side rows and low baskets down the center. A rich mantel decoration of American Beauties and profuse garlands of asparagus contributed to the extreme beauty of the banquet hall.

President James Wheeler of the Gardeners' and Florists' Club of Boston welcomed the guests, expressing his pleasure at meeting so many distinguished visitors and voicing the belief that, in the light of this year's great success, next year's rose show will overtax the accommodations of the halls. He then introduced as toastmaster, Wm. J. Stewart, who, after a few introductory words relative to the rose and the organization devoted to its interests, called upon President Alex Montgomery to respond to the toast, "The American Rose Society." Mr. Montgomery was received with tumultuous applause and expressed, in response, his appreciation of the honor conferred in the selection of Boston as the next meeting place.

M. H. Walsh was next called upon to receive on behalf of Miss Sarah B. Fay, the beautiful silver cup presented by Col. Chas. Pfaff, and made felicitous reply.

Frank H. Traendly, president of the New York Florists' Club, responded for that organization, which had shown its good-will toward Boston by sending so many of its members to this occasion, expressing appreciation of the hospitality extended by Boston.

Mr. Montgomery was then called up to receive and hold for the coming year the Lord & Burnham silver cup, on behalf of the Waban Rose Conservatories. Mr. Montgomery promised to

Cinerarias at Boston Exhibition

do his best to win the honor of filling it next year.

Adolph Farenwald, speaking for the toast to "The Florists' Club of Philadelphia," said some very interesting and inspiring things about the rose, and complimented Boston upon the grand exhibition he had been privileged to enjoy. The A. H. Hews & Co.'s cup, won by W. W. Edgar, was next handed over to that gentleman, who responded with a beaming "Thank you."

Mr. Parker, who was called upon to respond for the amateurs, spoke interestingly, saying that if he had to choose his occupation over again he would become a gardener or a florist.

Prof. Louis C. Elson, who was the next speaker, was witty and entertaining as ever. He acknowledged his inability to say much about the rose from experience, and he might not be able to tell the difference between a Lawson pink and a Standard Oil plant, but understood they were both obtained by grafting. He gave some interesting historical facts relative to the use of flowers in olden times, referring particularly to the famous tulip craze in Holland.

The gold medal presented by Peter Crowe was then handed to Mr. Montgomery, the winner, who responded appropriately.

H. A. Siebrecht applauded the good fellowship prevailing, and made a very flowery, rosy speech, complimentary to Boston and her visitors and recording a promise to come again a year hence.

Jackson Dawson, being next called upon, spoke of his efforts to bring the hardy roses into more general use and the methods by which this might be attained.

Peter Fisher responded for the American Carnation Society. He told of his love for the carnation to which he had devoted so many years of his life, but generously accorded the rose her title of the Queen of Flowers still, and told how he and Mr. Montgomery had yesterday exchanged compliments by becoming members of each other's society. He hoped that the two societies would work hand in hand together.

Benjamin Hammond responded gallantly to the toast of "The Ladies." The greatest carnation had been named in honor of a lady, and the thousands of dollars paid for it had been a better investment for the people's advancement than if the amount had been paid into a missionary society.

J. K. M. L. Farquhar was next called upon to speak for the Massachusetts Horticultural Society. He spoke of the pride that institution felt in welcoming such men as constitute the American Rose Society and have made such a notable exhibition of the florists' art. Our new roses and carnations are attracting the attention of Europe, and the future is full of promise for advanced horticulture in America.

J. B. Nugent, being called upon to speak for 28th Street, New York, the great center of rose distribution, did so eloquently and well. He was followed by Theodore Wirth of Hartford, who gave a brief description of the magnificent rose garden recently constructed by him in the Hartford parks.

M. H. Walsh was next, and received an ovation. He spoke enthusiastically of the rapid advancement of the rose interests now under way and promised great things for next year's exhibition, not only from New England, but the other large rose-growing communities all over the country.

President Wheeler made the closing remarks, and after a hearty vote of thanks had been vociferously presented to toast-master Stewart, the pleasant occasion came to a close.

SYMPTOMS OF SPRING

The tree by the gate is brown and bare
And it shows no signs of spring,
But a bluebird set on a swingin' branch
And warbled like anything.

His back was blue as the blue of the skies,
And his breast was pink as a rose,
And he looked like a bud of promise there
To bloom when the spring breeze blows.

And I guess he's going to bloom all right,
For another one came his way,
And he cottoned to her to beat the band
And they both had a lot to say.

He fuzzled his feathers and chirped and chirped,
And the other one cooed and cooed,
Then they shook their wings and away they flew
In the pleasantest kind of mood.

But they came back soon with straws in their bills,
A-chatterin' with delight,
And by and by, when the spring has come,
I guess they'll blossom all right.

W. J. Lampton, in *N. Y. Sun.*

Cyclamens at Boston Exhibition

Spring Exhibition at Boston

Pot Plants at the Boston Exhibition

The exhibition which filled the spacious halls of the Horticultural Building to overflowing and drew for four days an enormous attendance of the Hub's best society was pronounced by all to have been in all respects the most notable ever held in Boston. The large hall was devoted to the plant groups, of which the cinerarias, cyclamens, and promiscuous greenhouse groups were remarkable as heretofore for the wonderful perfection of the specimens and the taste and finish shown in their arrangement. Above and beyond all in novelty and startling effect were the trained specimen rambler roses from M. H. Walsh, these being a part of the American Rose Society's exhibition. Nothing approaching this display has ever been seen in this country or elsewhere. The cinerarias of the stellata section came in for especial admiration. The small exhibition hall held the orchids and bulbous plant displays. To attempt to particularize on the rare and beautiful varieties of orchids shown would tax the limits of this volume. As in the case of most of the other sections we must let the premium list hereto appended tell the story.

The large lecture hall was devoted to the carnation and rose exhibits, the latter being the American Rose Society's department and including both plants and cut flowers. The number of H. P. roses and pot-grown plants was fully up to expectations, something that the Rose Society has not succeeded in drawing out heretofore, and a welcome relief from what would otherwise be a monotonous display of commercial florists' varieties. As to quality, it was superb throughout.

Here, as with other sections of the great display, we leave the premium list to give details of varieties and their exhibitors.

A fine vase of rose Richmond arrived from E. G. Hill & Co. on Friday, and was the center of much admiration.

The carnation growers made a superb showing in this hall also. The rose men had reason to congratulate themselves on the results of their own efforts as, with anything like the meager rose shows of recent years, they would have been literally swamped and buried by their enterprising carnation brethren. The showing of the latter was simply superb as to quality, variety, and extent. The sweet peas from William Sim astonished the visitors. Flower stems two feet long and bearing as a rule three flowers each are not a common sight.

The brick arches of the large hall were clothed high up with white pine boughs faced with great masses of bougainvillea and the bases grouped about with enormous acacias and genestas making a gorgeous effect. Altogether the arrangement of the exhibition was the best yet in the new building.

Following is the list of awards:

MASSACHUSETTS HORTICULTURAL SOCIETY

Theodore Lyman Fund

Indian Azaleas — Six distinct named varieties: 1st, E. W. Breed; 2d, Edward McMulkin.

Society's Prizes

Palms. — Pair: 1st, Mrs. John L. Gardner; 2d, Geo F. Fabyan. Orchids — Three plants: 1st, Geo F Fabyan; 2d, Edmund W. Converse; 3d, Edward J. Mitton. Hard-wooded Greenhouse Plants. — Two or more genera, four, in bloom: 1st, Ed. A. Clark. Acacia; — Specimen plant in bloom: 1st, Dr. C. G. Weld. 2d, Dr. C. G. Weld; 3d, Edmund W. Converse. Climbing Rose. — Specimen plant, in bloom: 1st, M. H. Walsh; 2d, Francis Skinner, Jr; 3d, M H Walsh Collection of Rambler and other roses, suitable for landscape or decorative purposes, grown in pots: 1ts, M. H. Walsh; 2d, ditto; 3d, ditto. Hardy Primroses and Polyanthuses. — Twelve plants of distinct varieties: 1st, Wm. Whitman; 2d, Mrs. John L. Gardner; 3d, Wm. Whitman. Cyclamens. — Ten plants: 1st, Geo. F. Fabyan: 2d, Edward J. Mitton. Ten plants, in not over seven-inch pots: 1st, Geo. F. Fabyan; 2d, Dr. C. G. Weld; 3d, Geo. F. Fabyan. Single plant: 1st, Geo. F. Fabyan; 2d, Ed. A. Clark; 3d, Ed. A, Clark. Cinerarias. — Six varieties: 1st, Geo. F. Fabyan. Three varieties: 1st, Geo. F. Fabyan; 2d. Edmund W. Converse. Cineraria stellata. — Six plants: 1st, Mrs. John L. Gardner; 2d, ditto. Hyacinths. — Twelve named varieties: 1st Mrs. John L. Gardner; 2d, E. A. Clark; 3d, Bussey Institution. Three pans, not to exceed 12 inches: 1st Wm. Whitman; 2d, Mrs. John L. Gardner; 3d, Ed. A. Clark. Single pan: 1st, Geo. F. Fabyan; 2d, Mrs. John L. Gardner; 3d, ditto; 4th, Wm. Whitman. Tulips. — Six 8-inch pans: 1st, Wm. Whitman; 2d. E. A. Clark. Three 8-inch pans: 1st, E. A. Clark; 2d, Wm. Whitman; 3d, E. A. Clark. Three 10-inch pans, 12 bulbs of one variety in each: 1st, Wm. Whitman; 2d, E. A. Clark; 3d, E. A. Clark. Polyanthus Narcissus. — Four 8-inch pots: 1st, Mrs. John L. Gardner; 2d, E. A. Clark. Jonquils. — 6 pots: 1st, Mrs. J. L. Gardner; 2d, Wm. Whitman; 3d, E. A. Clark. Narcissi. — Six 8-inch pots: 1st, Wm. Whitman; 2d, Mrs. John L. Gardner; 3d, E. A. Clark. Three 8-inch pots: 1st, Wm. Whitman; 2d, E. A. Clark; 3d, E. A. Clark. Crocuses. — Three 10-inch pans: 1st, Bussey Institution. Roman Hyacinths. — Six 8-inch pans: 1st, E A. Clark; 2d, Wm. Whitman. Display of Easter plants: 1st, Ed. A. Clark; 2d, Edward McMulkin. General Display of spring bulbous plants. — 1st, Bussey Institution; 2d, Ed. A. Clark.

Special Prize

Offered by Mrs Anna C Ames, Boston

Rose, "Mrs. Oliver Ames" Vase of fifty blooms 1st, W. H. Elliott; 2d, Waban Rose Conservatories.

Special Prize

Offered by the Gardeners' & Florists' Club, Boston

Vase of Mixed Roses — Twenty-five blooms, not less than four varieties: 1st, Col. Chas. Pfaff; 2d, W. H. Elliott.

Society's Prizes.

Hybrid Perpetual Roses — Twelve blooms, in not less than four named varieties: 1st, Col. Chas. Pfaff, 2d, E. A. Clark; 3d, Miss S. B. Fay. Twelve blooms of Ulrich Brunner: 1st, J McFarland Tender Roses in Vases Twelve blooms of American Beauty: 1st, Arthur Griffin, 2d, W H Elliott Twenty-five blooms of The Bride: 1st, W H Elliott Twenty-five blooms of Bridesmaid: 1st, W. H Elliott Twenty-five blooms

of Liberty: 1st, W. H. Elliott. Twenty-five blooms of any other variety: 1st, W. H. Elliott. Carnations.— Vase of one hundred blooms, of one variety, with foliage: 1st, F. R. Pierson Co.; 2d, Patten & Co.; 3d, Peter Fisher. Twenty-five blooms of any named Crimson variety: 1st, Peter Fisher, Ruby; 2d, Wm. Nicholson, Harry Fenn; 3d, Patten & Co., Harry Fenn. Twenty-five blooms of any named Dark Pink variety: 1st, Peter Fisher, Nelson Fisher; 2d, Patten & Co., Nelson Fisher; 3d, Wm. Nicholson, Mrs. T. W. Lawson. Twenty-five blooms of any named Light Pink variety: 1st, Wm. Nicholson, Enchantress; 2d, Peter Fisher, Enchantress; 3d, Patten & Co., Enchantress. Twenty-five blooms of any named Scarlet variety: 1st, Guttman & Weber, Victory; 2d, Peter Fisher, Flamingo; 3d, F. R. Pierson Co., Flamingo. Twenty-five blooms of any named White variety: 1st, Peter Fisher, Lady Bountiful; 2d, Patten & Co., Lady Bountiful; 3d, Peter Fisher, Princess. Twenty-five blooms of any named Yellow Variegated variety: 1st, Backer & Co., Eldorado; 2d, Patten & Co.; 3d, Backer & Co. Twenty-five blooms of any named White Variegated variety: 1st, Patten & Co., Mrs. M. A. Patten; 2d, H. A. Stevens Co., Mrs. M. A. Patten; 3d, Peter Fisher, Mrs. M. A Patten. Pansies.— Forty-eight cut blooms, not less than twenty-five varieties: 1st, James Anderson; 2d, Mrs E M Gill. Violets — Bunch of one hundred blooms of Lady Hume Campbell: 1st, H. F. Woods; 2d, L. E. Small; 3d, E. Brigham. Bunch of one hundred blooms of any other Double variety: 1st, F. R. Pierson Co., Marie Louise; 2d, Norris P. Comley, Neapolitan. Bunch of one hundred blooms of Princess of Wales: 1st, H. F. Woods. Orchids.— Display of not less than six genera and fifteen named species and varieties, filling not less than twenty bottles: 1st, Langwater Gardens, North Easton, the Appleton Silver Gilt Medal; 3d, Col. Chas. Pfaff, the Appleton Bronze Medal.

Awards for Vegetables

William J. Walker Fund

Radishes.— Four bunches of Turnip Rooted: 1st, A. Nixon; 2d, A. E. Hartshorn; 3d, W. W. Rawson. Cucumbers.— Pair: 1st, W. W. Rawson; 2d, W. Warburton. Dandelions Peck 1st, A. E. Hartshorn. Lettuce.— Four heads: 1st, W. W. Rawson; 2d, Hittinger Fruit Co.; 3d, Walter E. Lenk. Rhubarb.— Twelve stalks: 1st, H. R. Kinney. Mushrooms.— Twelve specimens: 1st, H R. Kinney; 2d, A W Crockford, 3d, H. A Stevens Parsley.— Four quarts: 1st, Hittinger Fruit Co.; 2d, Walter E. Lenk.

Additional Awards

Gratuities. Edward McMulkin, palms and bay trees; Lager & Hurrell, display of orchids; Julius Roehrs Co., display of orchids; Geo. McWilliam, cut sprays of Cymbidium eburneo-Lowianum; Bussey Institution, forced shrubs and plants; Edmund W Converse, display of cyclamen, primulas, etc.; Harvard Botanic Gardens, display of Primula obconica and palms; R. & J. Farquhar & Co., display of spring bulbs and plants; Carl Jurgens, vase of lily of the valley; F. R. Pierson Co., vase of American Beauty roses; Miss Sarah B. Fay, hybrid roses; M. H. Walsh, group of seedling rose Urania; M. A. Patten, three vases of carnations; Wm. Nicholson, display of carnations; L. E. Small, vase of white seedling carnation No. 3; Guttman & Weber, vase of carnation Victory; Wm. Sim, two vases of sweet peas; M. A. Patten, two vases of mignonette; The Misses Eldridge, Bougainvillea spectabilis; Edward McMulkin, Yellow Marguerites; James L. Little, Antirrhinums; Mrs. E. M. Gill, display.

Silver Medal. E. O. Orpet, seedling cattleya × (C. Olivia — C. intermedia × C. Trianæ).

First Class Certificates of Merit. Henry H. Barrows & Son, Nephrolepis Barrowsii; F. R. Pierson Co., rose Baby Rambler (Mme. Norbert Levavasseur); Mrs. M. F. Plant, Phalaenopsis amabilis Rimestadtiana; Julius Roehrs Co., Cymbidium Lowianum.

Honorable Mention. Lucius H. Foster Estate, Nephrolepis Dorchester; The Misses Eldridge, Bougainvillea spectabilis, Lager & Hurrell, Cypripedium glaucophyllum; Bayard Thayer, Phlox divaricata, forced; Chicago Carnation Co., Carnation Cardinal; John E. Haines, new carnation John E. Haines; John Murchie, new carnation Fred Burki; W. J. & M. S. Vesey, carnation Glendale; Wm. Sim, new sweet pea Earliest Sunbeam; M. H. Walsh, new white seedling rose, double; Julius Roehrs, Ficus Cannonii.

AMERICAN ROSE SOCIETY PRIZES

Teas and Hybrid Teas

Division A. Twenty-five cut blooms (open to all). American Beauty: the 2d prize to W. H. Elliott. Bride: 1st, W. H. Elliott. Bridesmaid: 1st, W. H. Elliott; 2d, Montrose Greenhouses. Mme. Hoste: 1st, John Breitmeyer's Sons. Souvenir de President Carnot: 1st, R. T. McGorum; 2d, J. McFarland. Golden Gate: 1st, Floral Exchange; 2d, Robert Simpson. Bon Silene: 1st, John Breitmeyer's Sons. Mrs. Oliver Ames: 1st, W. H. Elliott. Ivory: 1st, Floral Exchange. Safrano: 1st, W. H. Elliott. Liberty, 1st: W. H. Elliott; 2d, Waban Rose Conservatories. Any other named disseminated variety: 1st prize "A," Mr. Fitzpatrick, Killarney; 1st prize "B," Robert Simpson, Uncle John; 1st prize "C," John Breitmeyer's Sons, La Detroit. Queen of Edgely: 1st, Floral Exchange.

Division B. (Open to growers having not more than forty thousand feet of glass in roses.) Twelve cut blooms. American Beauty: 1st, Briarcliff Greenhouses. Bride: 1st, Montrose Greenhouses; 2d, R. T. McGorum. Bridesmaid: 1st, Montrose Greenhouses; 2d, Robert Montgomery. Souvenir de President Carnot: 1st, Robert T. McGorum; 2d, J. McFarland, Mrs. Oliver Ames: the 2d prize to Robert Montgomery.

Hybrid Perpetuals

Division D. Twelve cut blooms. (Stems not less than twelve inches.) Ulrich Brunner: 1st, J. McFarland. Mrs. John Laing: 1st, J. McFarland.

Division E. (Open to private gardeners and amateurs only.) Twelve cut blooms. Magna Charta: 1st, Col. Chas. Pfaff.

Division F. Special Prizes for Cut Blooms.— Special Prize presented by Benjamin Dorrance.— For display of cut blooms of roses, not less than five varieties and not less than twenty-five blooms of any one variety, to be competed for by growers outside of a radius of one hundred and fifty miles of Boston: Brant Bros., Utica, N. Y., a Silver Cup.

Special Prize offered by John B. Nugent, Jr. Twenty-five blooms of any red rose, not disseminated previous to 1903: 1st, John N. May, Gen. MacArthur.

Special Prize offered by John B. Nugent, Jr. Twenty-five blooms of any pink rose, not disseminated previous to 1903: 1st, John Breitmeyer's Sons, La Detroit.

Special Prize offered by President Alexander Montgomery. Twenty-five blooms of any American seedling rose, introduced in or since 1901: John Breitmeyer & Sons, La Detroit.

Special Prize offered by Siebrecht & Sons. Fifty blooms of Killarney, grown within two hundred and fifty miles of Boston: Mr. Fitzpatrick.

Special Prize offered by Treasurer John N. May. Display of blooms not less than ten varieties, in a space of fifty square feet: Col. Chas. Pfaff.

"Executive Committee's Prizes." Fifty blooms of American Beauty roses: 1st, Waban Rose Conservatories; 2d, Briarcliff Greenhouses. Fifty blooms of any other variety: 1st, A. Farenwald, Liberty; 2d, W. H. Elliott, Liberty. Six blooms of any variety introduced in 1901 or subsequently: 1st, John N. May, General MacArthur. Twenty-five blooms of any rose of American origin, not yet in commerce, either Tea or Hybrid Tea, seedling or sport: Waban Rose Conservatories, rose Wellesley.

Special Prize offered by E. A. Clark, for twenty-five blooms of hybrid perpetual roses, not less than six varieties, for private gardeners only: Col. Chas. Pfaff.

Pot Plants

Division G. (Open to all.) Twenty-five hybrid perpetual roses in pots, not less than ten varieties: Miss S. B. Fay (M. H. Walsh, gardener), a Silver Cup presented by Col. Chas. Pfaff.

Twelve hybrid perpetual roses in pots, not less than five varieties: W. W. Edgar . presented by M. H. Walsh.

Six plants, any one variety, in not larger than eight-inch pots: F. R. Pierson, Baby Rambler.

Specimen plant, in pot: 1st, W. W. Edgar, Mme. Eug. Verdier; 2d, M. H. Walsh, Urania.

Climbing Roses in Pots

Specimen plant, trained or not, in pot or tub, not less than twelve-inch: 1st, M. H. Walsh, Lady Gay.

Display of Rambler and Climbing roses in pots, covering not less than fifty square feet: M. H. Walsh, presented by F. R. Newbold.

Peter Crowe prize, for best vase of Bride and Bridesmaid: Waban Rose Conservatories, a Gold Medal.

Pierson & Sefton Silver Cup, for vase of fifty assorted roses, not less than three varieties: the Waban Rose Conservatories.

Cup offered by A. H. Hews Co., for best rose plant, not a climber: W. W. Edgar.

Prize offered by Welch Bros., for best vase of roses in the hall: Waban Rose Conservatories.

Lord & Burnham Trophy: Waban Rose Conservatories, prize awarded in conjunction with the 1st (cash) prize for fifty American Beauty roses in Class F.

Bird's-eye View of the Home Grounds of Mount Hope Nurseries, Rochester, N. Y.

New Single Dahlias

View of Field of Single Dahlias

Following Mr. Robertson's very interesting and instructive article on dahlia culture in the issue of the 18th, I am very glad to take up the subject where he dropped it. The closing paragraph, "There are also many good varieties for cutting purposes in the Single, the Decorative, and the Show classes, especially in the Singles, since we have got several varieties of the 20th century type."

This mention of the new single dahlias is most appropriate. In no other class of dahlias has such marked improvement been shown. The old style and class of single dahlias are rapidly being entirely out-classed. The Century type of singles is considered the most beautiful of all dahlias, and through judicious crossing and inter-breeding,we now have a complete range of colors and shades in all the various classes of single dahlias.

Compare the new single cactus dahlia, The Fairy, with any of the old type single cactus. The plant is medium to dwarf, growing only about three feet high, branching low down abundantly, throwing long slender branches on which are produced the dainty little flowers in the utmost profusion. Flowers, though single, are of cactus form, the petals being narrow, pointed, and beautifully twisted, making them airy and graceful. The color is pure white, suffused and overlaid the most chaste and delicate rosy lake. It is one of the most profuse of all dahlias and as it can be cut in sprays, is invaluable for bouquets and other cut-flower purposes. Mr. Patrick O'Mara considered it from an artistic stand-point, the finest thing we had on the place.

In contrast to the beautiful Fairy, we have Harvard, a sturdy plant, growing five feet high, branching, with immense vivid crimson flowers, 6 to 8 inches in diameter, being in every way the exact opposite and probably the highest type yet reached in the new Century dahlias. Between these two types as represented by Harvard and the Fairy we have almost every combination of colors, shades, and tints in every conceivable type, running down through the Century collection, through the single Fancy, the single Show, and other types.

What could be more striking than a large plantation of single dahlias arranged for color effect? For comparative value of single and double dahlias for color effect, we would call attention to the illustration of "Field View of Single Dahlias" in this issue. On the extreme left of the picture are parts of rows, and through the middle of the picture, single dahlias, next to which will be seen a few double dahlias, while over on the right, another block of single dahlias. We are simply proving what we have said that single dahlias will give greater results, better results, more pleasing results for any kind of planting out-side, where display is wanted, whether for color work, or simply a general display, than any combination of double dahlias. Besides for cut-flower purposes they have an artistic beauty possessed by no other flower.

Among the new single dahlias, take the bright red Ami Downie, the grandest of all the purple leaved sorts. The Raven, dark maroon, shaded black, with beautiful, fern-like foliage. Gracie, white suffused blush, as dainty and chaste as the Raven is dark and striking. Striking, maroon tipped white, and best described as a single Frank Smith.

In white, what can surpass Alba Superba? So many flowers have had this name, but in this case the name can hardly do justice to the flower, which could almost be classed as a Century. Then Gaillardia, named from its striking resemblance to Gaillardia grandiflora, excepting that the imitation is far superior to the original. Pure yellow St. George still holds its own, as the best.

Among the Fancy, we would mention Danish Cross, bright scarlet with a white stripe; Minnie, white spotted and penciled pink and crimson; Paul, white margined rosy crimson; SingleEckford, an exact reproduction of the Fancy Lottie Eckford in single form. Buttercup, probably the most profuse blooming of all dahlias, and undoubtedly the best of all for bedding purposes. It is not uncommon to see a hundred blooms and hundreds of buds on a single plant. It branches out from the bottom in a semi-trailing form, making a plant as broad as high.

So we could go on did space permit.

Lawrence K. Peacock.

Among the fine cyclamens that at tracted so much attention at the Boston spring exhibition, some of the varieties represented were Grandiflora alba, Princess May, light pink, Duke of Fife, dark pink, James' Blood Red and Brilliant, both dark red.

NEWS OF THE CLUBS AND SOCIETIES

NEW LONDON COUNTY HORTICULTURAL SOCIETY

The bi-weekly meeting of the New London County Horticultural Society was held in New London, Conn., March 22. There was a good attendance, including a number of members of the society from Norwich. The larger part of the meeting was taken up with a discussion of the subject, "Some Hardy Herbaceous Plants Which Give a Succession of Blooms During the Season." The discussion was opened by John Malona, and was participated in by the members of the society. Eight new members were elected, making the present membership of the society 136.

It was decided to have a social at the next meeting, which will be held April 5 in Elks' hall, New London. Whist and other games will be played, and refreshments will be served. An admission will be charged. The sum of $125 has been contributed for cash prizes for coming shows in addition to the cups and medals which the club now has. A schedule of competitions has been issued by the shows committee.

BUFFALO FLORISTS' CLUB.

The regular meeting and election of officers took place at Wm. F. Kasting's hall on Tuesday evening last and was well attended.

The officers elected were Louis Neubeck, pres.; Chas. Guenther, vice-pres.; James Peak, secretary; E. C. Brucker, financial secretary; Chas. Keitsch, treasurer. At the close of business the members were seated to the best part of the program, "the feast," Mr. Wm. Scott being appointed toast-master. There was music and song galore. Many selections were sung by the club's tenor, Chas. Keitsch, and baritone, J. Bailey. Our able toast-master made it a point not to call on the younger heads for speeches on account of their bashfulness, although a good many were heard from. The out-going president also made some excellent remarks appertaining to the newly elected officers. Good remarks were heard from Hon. Geo. Urban, Jr., also from Louis Neubeck, Wm. F. Kasting, D. B. Long, Chas. Rooney, Chas. Keitsch, and many others. Mr. Andy Adams on "Good Ideas for Window Decorations" was interesting. Several out-of-town florists were present and a most enjoyable time was had by all who attended.

SPRING SHOW AT PHILADELPHIA.

The annual spring show of the Pennsylvania Horticultural Society took place March 28th, 29th, and 30th. The weather was ideal on the opening day, 74 degrees in the shade, and cloudless. Although not as large at some of its predecessors, the exhibition was very creditable as to quality and in some instances a distinct advance. This was notably the case in the Michell and Waterer classes for hyacinths, tulips, and narcissi. It is safe to say that these were superior in variety, culture, and up-to-date-ness to anything shown heretofore. Foliage plants were in force and the judges had their work cut out. In addition to the central group in the main hall, from Fairmount Park, and the many pairs and single specimens, there were four groups that taxed the judges nearly an hour before they could agree, the honor finally going to the Hopper collection, which had been grown and staged by John Dodds. Second honors went to the Paul group, grown and staged by Joseph Hurley, and special mention was awarded to the Pepper exhibit as only two prizes were offered.

A grand lot of Primula obconica was another feature we think never before equalled, five entries and all good; but the first prize lot from Robertson of the Pepper forces was certainly grand and deserved first. As far as we can make out Mr. Robertson carried off more firsts than any exhibitor in the show and we are almost afraid to say too much about him for fear he'll get that lofty and maybe fall over backwards. S. Batcheler, gardener to Clement B. Newbold, took second; Frank Ibbotson, gardener to J. Vaughan Merrick, third in this obconica display.

Xavier Scmitt deserves credit for his tasteful arrangment of the group of foliage plants from Fairmount Park, and Oglesby Paul, his superior, did the right thing in granting him permission to show what the park has in up-to-date stock to the superior people, the four hundred; and the experts who have an idea that if it's the city it must be rank and a sight to make the angels weep. It was a fine group — none better ever shown here. Let the scoffers make a note of it.

W. K. Harris sent a fine pair of Bougainvillea Sanderiana, which graced the bottom of the main stairway along with a pair of Robertson's first-prize specimen hydrangeas. Two creditable collections of orchids were on view, one from the Julius Roehrs Co., Rutherford, N. J.; the other from Lager & Hurrell, Summit, N. J. Frank Ibbotson took first on cyclamens and also had an exhibit of a new giant mignonette with spikes fifteen inches in length, which he calls "Enormous."

There was a good showing of Cineraria polyantha (stellata), first for specimen and group of six going to Samuel Batcheler, gardener to C. B. Newbold, with second to Wm. Kleinhanz, gardener to P. A. B. Weidener. The Drexel place only sent one entry, a Gleichenia flabellata for which a first was awarded, second going to Batcheler's Davallia Fijiensis plumosa. Arthur Mallon, gardener to Edgar J. Scott, won first for six pans of narcissus and second for two pans of variegated tulips in the Waterer competition.

John Hobson, gardener to Edward Schmidt, took first for the best specimen foliage plant, and was also in the race for the best four specimen azaleas.

The carnation men were enterprizing as usual and several interesting exhibits were staged. John E. Haines brought his famous red, and some promising seedlings in white, pink, and variegated. John Kuhn put up four lots under number. J. L. Dillon sent Crisis, the fine new scarlet, and the Strafford CarnationFarm staged six fine vases: Genevieve Lord, Flamingo, Enchantress, Judge Hinsdale, Harry Fenn, and Adonis.

John McCleary, gardener to Mrs. R. J. C. Walker, was a successful prize winner in a number of the bulb classes, especially in hyacinths and tulips in pans in the Michell collection, and in specimen plants in the geranium classes, where he ran a close race to that king of geranium growers, Wm. Robertson.

George C. Watson.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The annual meeting of the Executive Board will be held at the New Willard Hotel, Washington, D. C., on Tuesday, April 4, 1905. Members of the Society or others having suggestions to make whereby the usefulness of the organization may be increased and the good of the profession promoted in any of its branches, are cordially invited to send such suggestions in care of the secretary and they will receive careful attention.

Address

Wm. J. Stewart, *Secretary*,
11 Hamilton Place, Boston. Mass.

NOTES.

On Tuesday, April 4, at 8 p.m., the meeting of the Kentucky Society of Florists will be held at the store of C. W. Reimers, Louisville. A sweet pea show for June is under consideration. Mrs. C. B. Thompson is expected to read a paper and a good attendance is urged.

New York and Madison, N. J., met each other on the alleys at Newark last week and New York got a thrashing. Many explanations of this disaster are given by the aggregation from the big city, but the fact remains as above stated, and Madison is looking for other worlds to conquer.

GREENHOUSES BUILDING OR PROJECTED.

Hartford, Conn. — Edward Welch, proposed additions.

Auburn, N. Y. — Budlong Company, range of houses.

Hyde Park, Mass. — George Anderson, carnation house.

Norwich, Conn. — M. J. Field, rebuilding.

Thompsonville, Mass. — C. F. Brainard, greenhouse, office, and work room.

Portchester, N. Y. — F. Leonhard, two houses.

Hitchings & Co. report contracts for the following:

Winchendon, Mass. — Hon. Morton E. Converse, one house.

Milton, Mass. — Mrs. Roger Wolcott greenhouse and work rooms.

Boston, Mass. — Mrs. B. P. Cheney, conservatory.

Robert Miller, formerly of Butte, Mont., brother-in-law of Alex. Montgomery, of Natick, Mass., has leased the cucumber forcing houses of E. A. Lamphrey at North Brookfield, Mass., and will transform them into rose houses.

Ford Bros. have removed from West 30th street to 48 West 28th street, New York City, and have now one of the most commodious and complete establishments in the country for the wholesale flower trade. The ice room is 14 feet by 22.

OBITUARY

Alfred Chase, father of Stephen Chase the carnation grower of Nashua, N. H., died on March 28. Mr. Chase was for many years a leading market gardener of Nashua.

HAVE YOU KEPT YOUR EYE ON

LA DETROIT

The Grand New Pink Rose we disseminated Last Season?

WHAT IT DOES FOR US

It grows stronger and more vigorous than any Rose we ever grew.
It produces more high-grade and long-stem blooms than any Rose we ever grew.
It produces as many flowers as Bridesmaids planted in same house, same date, same quality of stock.
It is doing well with nearly every one that planted it last season.
It is in a class by itself and has COME TO STAY.

WHAT IT DID AT BOSTON

Won the Alexander Montgomery Special Prize, $25.00 for 25 Blooms of Best American Seedling Rose introduced in or since 1901.
Won the John B. Nugent, Jr., Special Prize, $25.00 for 25 Blooms of any Pink Rose not disseminated previous to 1903.
Won First Prize, $10.00, Class A 31, for 25 Cut Blooms.

PRICE: $12.00 per 100, $100.00 per 1000
from 3-inch pots. READY NOW

BUSINESS CHANGES

The greenhouses of Mrs. Wm. McClunie at Hartford, Conn., have been sold to Edward Welch, proprietor of "The Tannel Greenhouses."

W. W. Wells, late with C. D. Zimmerman, of Buffalo, has taken the greenhouses of E. J. Buxton and will conduct the business as heretofore.

The greenhouses lately conducted by B. F. Engle at Junction Park near New Brighton, N. Y., have been sold to The Junction Park Greenhouse & Nursery Co., and will be managed by Otto Miner of Rochester.

NEWS NOTES

Chas. Rayner of Anchorage, Ky., has received a verdict of $200 in his suit against E. H. Marcus for selling him inferior putty.

The Chicago Carnation Co. has bought one-half interest in John E. Haines' phenomenal scarlet carnation named John E. Haines.

PHILA. PLANT MARKET

Advance booking for Easter plants has already commenced. S. S. Pennock and Leo Niessen Co. both report brisk demand especially for azaleas, Ramblers, and Easter lilies. Quite a scarcity is anticipated on the azalea supply on account of the absence of the big Dreer block this season and the wise ones are taking time by the forelock.

The Century Set of Superb New Dahlias

See Color Plate in our Catalogue (mailed free)

The Greatest Offer Ever Made, 10 for $1.00

PRICE: Single varieties in this set, 15 cts. each; 4 for 50 cts.

MAID OF KENT (No. 1). — A beautiful variety. Scarlet-**maroon** at base of petal, point of each petal **white.**

HARRY FREEMAN (No. 2). — **Pure, glistening snow white.** Medium size, good form. Borne on long stems

GLORIOSA (No. 3). One of the most superb Dahlias in existence, with unusually large and beautifully formed flowers, having very broad petals, filling the flower well into the center. At a distance it does not look unlike a Peony. The color is the richest that can be had in any flower – **bright, velvety crimson,** almost the color of the Prince Camille de Rohan Rose. The plant grows to a medium size, producing flowers freely on long, stiff stems.

CLIFFORD W. BRUTON (No. 4). — The finest clear yellow decorative Dahlia in existence. The flowers are immense in size, 5 to 6 inches across, perfectly full and double like a Chrysanthemum. **Rich, deep, lemon-yellow** flowers are produced on tall, stiff stems, desirable for cutting

SYLVIA (No. 5). New pink Dahlia. One of the most valuable, decorative Dahlias ever produced. A profitable commercial pink. Flowers from 4 to 6 inches in diameter, of fine form and full to the center, which is **white, shading to soft pink** on the outer petals. The plant is a strong, healthy grower and the finely shaped flowers are set on very long, stout, but graceful stems.

ERNEST CANNEL (No. 6). — **Bright terra-cotta** shaded **orange.** Compact solid flower, with short broad petals.

GRAND DUKE ALEXIS (No. 7).—Probably the finest type of the large, double quilled Dahlia. It bears a magnificent flower of the largest size, distinctly unique in form, the petals are rolled up so that the edges overlap. Color **pure, soft white,** the tips of the petals edged and suffused with delicate pink.

RUBY QUEEN (No. 8).—A distinct variety, with large, full flowers of fine **ruby-purple.** Long stems; free blooming.

A. D. LIVONI (No. 9). — Very valuable as the best **clear pink.** Magnificently formed flowers, perfectly full and double, of a **beautiful soft pink.** The petals are quilled, of splendid substance and closely formed about the center.

KEYSTONE (No. 10).—**Bright rose-pink** with wide stripes of **rich crimson.** Strong grower and free bloomer.

Special Offer *One each of the ten great new, large flowering varieties described above and illustrated in our catalogue, post-paid for $1.00. Please order as* "THE CENTURY SET."

CUT-FLOWER MARKET REPORTS.

BOSTON Flowers of all kinds are coming in very plentifully to this market, and there has been a big drop in value of roses and carnations. Of the latter, Prosperity is the only variety commanding a price above the regular quotations. Tea roses are very abundant, and only the most exclusive grade can realize top quoted figures. Violets are going.

BUFFALO The market shows a slight improvement, although there is an abundance of stock and bulbous flowers are at a stand-still. Carnations are moving more satisfactorily.

CINCINNATI Long-stemmed Beauties are again in and selling readily. This grade of Beauties has been the only flower which for the past few weeks could be called scarce. Bulbous stock comes in heavily and meets a very slow sale.

NEW YORK This market is well supplied with every possible cut flower product. Business is not at a standstill, by any means, but the receipts are so heavy that the amount disposed of makes but little impression on the whole. Jacq and Brunner roses are in and are good. Carnations are of splendid quality. Violets are beginning to shrink. If the present warm sunlight continues, there will be some surprises in the Easter lily problem.

PHILADELPHIA Market recovered but faintly last week, the fine weather bringing in flowers in large quantity. Beauties are still away down and an unremunerative crop. Liberty suffers also, although they will probably average up a little better than Beauty. Bride and Bridesmaid in large supply, and, with demand only normal. Carnations braced up a little towards end of week, but are still low. If violets last until Easter they will do well. Cattleyas, cypripediums, and dendrobiums are still plentiful enough. Good smilax and Sprengeri scarce. Plumosa market easy, as the fine southern stock handled by Pennock has kept the market well supplied.

ST. LOUIS Demand fairly steady for the past four or five days. Supply heavy on all lines. Southern jonquils have made their appearance in this market.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅜- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

DREER'S HARDY PHLOXES

HARDY PHLOX PANTHEON

We have an immense stock of the following popular varieties of Phloxes, the best of their respective colors, in one-year field-grown plants which were back and are now potted into three-inch pots, in prime condition for planting to give immediate results.

AQUILLON. Bright deep pink, crimson eye.
BRIDESMAID. Pure white, with large crimson eye.
BLANC NAIN. Dwarf pure white.
BOUQUET FLEURI. White, with deep rose eye.
CHAMPS ELYSEE. Fine rich purplish crimson.
ECLAIREUR. Purplish crimson, with light halo, large flowers.
EUGENE DANZENVILLIER. Lilac, with white edge and center.
JEANNE D'ARC. A fine pure white.
MOLIERE. Salmon rose, with deeper eye.
PANTHEON. Deep salmon rose, free and effective.
PROFESSOR SULIEMAN. Bright lilac rose.
SEMIRAMIS. Purplish magenta.

Any of the above varieties 75 cents per dozen; $5.00 per 100; $40.00 per 1000

Scarlet Varieties

COQUELICOT. The most popular of the reds, bright orange scarlet, with carmine eye.
ETNA. Scarlet, with dark crimson eye.

$1.00 per dozen; $8.00 per 100; $70.00 per 1000

We are headquarters for all Hardy Perennial Plants.
Trade Catalogue mailed to all Florists.

Views in Lincoln Park, Chicago

The Conservatory

We present herewith three views showing the plant-bedding at Lincoln Park, Chicago, and a portrait of the skilful head-gardener, Alois Frey.

The first view shows the main conservatory, as seen looking north through the parterre. The conservatories are very extensive, the range comprising several houses that do not appear in the picture, and the collection of plants is very extensive. The conservatories are open to the public from 9 A.M. to 5 P.M. daily.

In the service houses are grown all the plants for the show houses, besides the many thousands of bedding-plants required for the extensive summer bedding which is carried on here. The view of the parterre gives an idea of the character of the outside work. The large round bed shown in the foreground was filled with Abutilon Savitzii, bordered with Iresene Wallissii. The large triangular-shaped beds are of cannas, with border of Pennisetum longistylum and P. Ruppelianum. One of these beds is shown in the other illustration. The Pennisetum used in bordering it is raised from seed sown in January and later transplanted into pots until planting-out time in June.

Alois Frey, Head Gardener

The Parterre

Bed of Cannas and Pennisetum at Lincoln Park

As compared with the better known P. longistylum, P. Ruppelianum is distinguished by its longer plumes, which are purple instead of white. The effect of this grass used in the manner described is grand.

Some Greenhouse Pests

I

A knowledge of insect pests as well as fungus diseases is a matter of dollars and cents to every florist, and too much ignorance exists concerning them, ignorance that it is to the advantage of every grower to get rid of.

Injurious insects in the greenhouse may be divided into permanent and transient, the former those which always live indoors, and the latter those that drift in now and then and after staying awhile die or travel off. In general the worst resident pests are the green fly, thrips, and red spider, all of which are found in almost every greenhouse, but often escaping notice because of their small size.

GREEN FLY

The plant lice, green fly, or aphis — aphididæ — do much damage in all stages of growth by sucking the juices of leaves, stems, and flowers, distorting them and even killing them if the lice are numerous. The insects are small, .07 to .08 of an inch in length, pear-shaped, with a couple of tubes projecting backward from the abdomen. In color they are all shades of green, black, or brown, and are provided with a beak and six legs, the number all true insects have. The green lice live particularly on carnations, violets, and roses; the black on chrysanthemums. They hatch from black, shining eggs laid in bunches, in cracks, crevices, or around buds. So-called "stem-mothers," females, are produced from these, which are capable of bringing forth living young without mating. One brood follows another in rapid succession, multiplying so fast that it is soon difficult to distinguish different generations. The first few broods are wingless, but finally give way to a brood one-half of which are supplied with wings. These spread the pest. Outdoors in the fall both sexes begin to appear, which mate on the approach of cold weather and lay the eggs which survive the winter. Just when this egg-laying period occurs indoors, if it occurs at all, is not definitely known because of the confusion of generations. *Treatment.* — Man is aided in his warfare against this pest by certain Coccinellids, or lady-bugs, some flies, wasps, and a fungus disease. Spraying with kerosene emulsion, 1 part kerosene to 12 parts water; fish-oil soap, 1 pound to 6 gallons of water; infusion of tobacco, ½ pint to a pail of water, are all good sprays. Fumigation with tobacco or HCN will rid a house of them.

CUTWORMS

The larvæ or caterpillars of certain butterflies and moths are at times injurious to certain crops, particularly carnations, violets, and smilax. They are not permanent pests, but gain admittance through the soil, or the moths fly in through the ventilators and lay their eggs inside, which produce the cutworms. Several species are represented, varying in length from one to two inches and of all shades and colors. The damage is done by the biting out of the softer parts of plants, especially the tops. Violets, carnations, smilax, sweet peas, pansies, mignonette, German ivy, tomato, rhubarb, asparagus, and lettuce all suffer, and in fact hardly anything is immune to their attacks. They feed at night, hiding under the surface of the ground, or in dark places during the day. *Treatment.* — There is no excuse for the presence of these pests. Spraying the plants with some arsenical poison will fix them, or they can be picked off after dark and crushed. Fumigation does little good unless the insects are feeding, as the gas will not penetrate the ground to any depth. Poison baits made by spraying a clump of clover, grass, or plantain with paris green (one-third pound to a barrel of water), cutting and strewing around the plants, will destroy large numbers. Prevention consists in sterilizing the soil and in covering the ventilators with wire netting, to keep out the moths.

R. L. Adams.

Echoes from England

A REMARKABLE BEQUEST TO HORTICULTURE

By the will of the late Mr. John Innes, of Merton, Surrey, who died in August last year, a bequest of the munificent sum of £325,000 is made for the purpose of establishing a school of scientific horticulture. Such an event is unique in the annals of gardening in this country, and further news will be awaited with great interest. The Royal Horticultural Society want to establish a scientific school at their new gardens at Wisley, but at present are hampered for lack of funds, so that the bequest of this large sum of money towards the same end is particularly opportune.

OUR CHIEF SOCIETY (THE ROYAL HORTICULTURAL)

The total number of Fellows, Associates, and affiliated societies is now 8,360. In 1904 there were 1,383 new Fellows: deducting resignations and deaths, which number 469, the actual numerical increase is 914, and the net increase in income is £1,510.19. You may be interested to hear what a Fellow gets in return for his guinea subscription: he has free admittance to the fortnightly shows and meetings held in the new hall; tickets for all the special shows, as the great Temple show, the fruit show, etc. The Society's journal is posted to him two or three times a year, and this in itself is worth a guinea. He also has free advice respecting insect pests and disease which affect his plants, and he receives a certain number of plants every spring from the Society's garden if he cares to apply for them. So that altogether the Royal Horticultural Society gives splendid value to its members.

WINTER-FLOWERING WALLFLOWER

Wallflowers are such popular outdoor spring flowers with us that there seems every reason to believe that the new wallflower which flowers through the winter under glass will also become widely grown. It bears sweetly scented flowers that vary through some charming shades of color — when opening they are yellow, then they pass through plum, bronze, and old gold before they fade. On the same plant there are always flowers of each shade of color and the plants flower very freely. Altogether it seems to be a valuable winter flowering greenhouse plant. It is the result of hybridizing Cheiranthus mutabilis and the garden varieties of wallflower. Messrs. James Veitch and Sons, Ltd., Chelsea, have the stock of this plant.

A NEW SCENTED PELARGONIUM

Among the new plants that attracted attention at the Royal Horticultural Society's show yesterday (February 28th) was the scented leaf Pelargonium Clorinda. It has rich, rose colored heads of flower, the lower petals being flushed with scarlet. Both flowers and leaves are scented, and it is free flowering. It was raised by Dr. Bonavia and shown by Messrs. Cannell & Sons, Swanley, Kent.

HONOR FOR A GARDENER'S SON

It is not often that the son of a gardener becomes sufficiently eminent to be commissioned to paint the portrait of the reigning sovereign, yet an instance of this has just occurred. His Majesty, King Edward, is giving sittings to Mr. Harold Speed for a portrait to be placed in the new Town Hall at Belfast, Ireland. Mr. Harold Speed is the son of a gardener who was well known at Matlock in Derbyshire where he worked.

SOME GOOD NEW PLANTS

Cymbidium Sanderæ. This is a newly introduced species from the East Indies, and is quite distinct from any other cymbidium. It is a very beautiful orchid, and Messrs. Sander & Sons, St. Albans, England, introduced it. The sepals and petals are white tinged rose pink, the tip heavily marked with short crimson lines. Orchid enthusiasts are numerous over here, and this new cymbidium came in for a good deal of admiration.

Primula Kewensis. Although this cannot be called quite new, it is practically so, so far as its general culture is concerned. It is a most valuable winter greenhouse plant. The flowers are freely produced, and the plants remain in flower throughout a long time. It resulted from intercrossing Primula floribunda with P. verticillata, and it combines the good characteristics of both parents. The flowers are rich yellow and are produced in whorls at intervals on the stem.

Eupatorium petiolare. Imagine a loose growing plant some three to four feet high in a pot only 4½ inches in diameter and bearing a large number of pink-white, daisy-like flowers, and you will have a good idea of the appearance of this plant, which was given an award of merit last year and has lately been well shown.

Well-grown plants bear large quantities of blossom; even the lateral shoots bloom freely when the main shoots have finished, if the latter are stopped. Messrs. Cannell & Sons, Swanley, Kent, have exhibited this eupatorium a good deal lately.

Harry H. Thomas

London, England.

Please Appreciate

A special advantage given to advertisers in HORTICULTURE, *without charge*, is the Buyers' Directory which tabulates the advertisers in each issue of the paper under the respective heading of the goods offered. This is a convenient ready reference for buyers, and its value to advertisers is obvious, being in fact a *double* announcement without extra cost.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

Congratulations to the plantsmen. What would Easter be without them?

Water; water; water. Tell customers how abundantly they must supply it to hydrangeas, azaleas, and other profuse-blooming subjects, if they want them to endure. A short life and a thirsty one is the fate of many a fine Easter plant.

In dressing plants for Easter gifts proceed cautiously. So well-finished are the specimens now provided for the great festival by the expert growers that "dressing" to hide imperfections is no longer necessary. Especially avoid gaudy artificial effects. The fantastic should have no place in such work.

It looks as though the growers might have an opportunity to exercise their best ingenuity in "holding back" their lilies and other flowering Easter stock this year. Here is where the man with that most useful adjunct — a capacious and serviceable cold-storage shed — has the advantage.

We learn with pleasure that the breach between the seniors and the faculty at Amherst Agricultural College has been closed up, and that the boys have all returned and settled down to work. Although this happy result was possible only by more or less reluctant yielding on both sides, yet the ends of justice and discipline seem to have been fully accomplished, and it is a cause for congratulation that everything has been adjusted with so much mutual satisfaction and harmonious accord assured between the faculty and the students henceforth.

Downing said that "true taste lies in the union of the beautiful and the significant." Although addressed particularly to the out-door gardener, this applies with no less force to the florist and his work. In the prevailing fashion of grouping bright-flowering plants in fancy receptacles for Easter gifts, abundant opportunity is afforded for the exercise of true taste and refined expression, and he who bears this truth in mind and adheres to this principle, in small matters as well as in large, cannot fail to gain due credit and appreciation for his handiwork.

How to secure the greatest amount of public benefit from our large public reservations is a much debated subject. Many well-meaning writers, anxious to appear as utilitarians, place the immediate physical enjoyment of the people as the foremost consideration and advocate the "opening-up" of our wild reservations by means of roads, trolley-cars, etc., so that every part will be accessible, that the people may get the benefit of fresh air and rural freedom. While not disposed to undervalue these considerations and recognizing that the common people should have something to say as to the use of what they are paying for as well as the artist and naturalist, we should deplore the wholesale transformation of the forest solitudes and untrodden dells into "breathing spots" and are convinced that "the greatest good to the greatest number" would not be secured thereby. As inaccessible wilderness such territory is a much better fresh air factory than if trodden over and denuded of much of its vegetation. In their wild state these tracts provide shelter and opportunity for birds and native flowers that would soon become extinct under the inroads of visiting throngs, and we do owe it to the place of our habitation that natural conditions are not ruthlessly and completely obliterated, that the native flora is not exterminated and that the birds and smaller animals indigenous to the country be given an opportunity to exist unmolested in their favorite haunts. Once overrun and scarred, our beautiful country can never be restored to its primitive attractiveness.

Do you like Horticulture? Then order it for your employees; tell your friends about it; or send us their names and we will mail sample copies to them. The larger our subscription list, the better paper we can afford to give you. The interests of Horticulture and its Readers are mutual.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

I am receiving HORTICULTURE regularly every Saturday, and assure you I have both use and pleasure in reading it. Accept my best wishes for the success of the enterprise. — W. F.

We have received from a subscriber to HORTICULTURE the following appreciative letter: —

HORTICULTURE PUBLISHING CO.—

The remark was made to me a short time ago, that the horticultural interests of this country had never yet shown that they could either produce or would support a high class trade paper. Your efforts to bring out the possibilities in this direction doubtless strike the highest note that has yet been reached. The demand of the local support for a large space devoted to local and personal items, would, if too largely acceded to, give the paper a provincial cast. Horticulture to be of value to any one, must be national in its scope and contain matter that will interest and appeal to readers in *all* parts of a large field.

Previous to the advent of HORTICULTURE, Boston was falling away from the high place she had occupied in this branch of activity. In the tone and spirit of the editorials, in the bringing out of writers of the standing of such men as Mr. Jackson Dawson, and in the whole general influence of the paper, HORTICULTURE is bringing to the front again the devotion, enterprise, and achievement which were either lying dormant or were being neglected. This is not only to the credit of Boston, but to the advancement of Horticultural interests in their widest import and application.

Feeling quite sure that as your motives are apprehended, they will appeal to all classes of the craft, and draw out their full support, I remain,

Yours very truly,

H.

TARRYTOWN HORTICULTURAL SOCIETY

The meeting of March the 28th was marked by a very large attendance. F. R. Pierson was awarded a certificate of merit for Baby Rambler rose and L. A. Martin received a similar award for an excellent vase of Antirrhinum majus. A very interesting and instructive essay on spraying for San Jose scale was read by L. A. Martin. Quite a lively discussion ensued, the consensus of opinion being that unless some concerted action is taken to check this pest, few fruit trees will be left alive in this section in the course of a few years.

The secretary announced several liberal donations towards the prize fund of the November show, the schedule for which is nearly completed. F. R. Pierson asked for the opinion of the members regarding the most suitable number of carnations to be staged for the cup he offers, his desire being to give the small growers a chance to compete. After the members had freely expressed their opinions, Mr. Pierson decided to give the cup for seventy-five blooms, twenty-five each of the three Lawsons; pink, white, and variegated, instead of for fifty blooms variegated Lawson as originally intended.

Next month Professor Powell will deliver a lecture on trees and roses. For this lecture the school trustees have kindly granted to the society the use of the lecture room in the high school which will allow of making the lecture open to the public.

WM. SCOTT,
Cor. Secy.

SOCIETY OF HORTICULTURISTS OF COLORADO

The annual meeting of the Society of Horticulturists of Colorado, was held at the Capitol Building March 24th, in the office of the Secretary of the State Board of Horticulture. The Society (it being only two years old) showed a satisfactory growth, for the short time it has been in existence. Some of the florists present brought and staged flowers that would have been a credit to any flower show, notable among which were the exhibits of E. E. Peterson, The Park Floral Co., The Colfax Floral Co., Ben. Boldt, and Mrs. C. R. Mauff, and, last but not least, were some vases of roses and carnations sent from Colorado Springs by Mr. Braidwood, although they suffered some by being shipped. A vase of American Beauties by Ben. Boldt about as fine as has been seen in Denver for many a day. A vase of Adonis by E. E. Peterson was very fine, also a vase of Mme. Abel Chatenay from Mrs. C. R. Mauff. Some plants of Adiantum cuneatum from Colfax Floral Co. were superb.

The meeting opened with an address from President John Satterthwaite, which was followed by a paper on Colorado soils by Prof. Longyear, who also gave illustrations from drawings and partly germinated seeds under magnifying glass. After that a paper on rose-growing under glass was read by Mr. J. Sked, foreman for the Park Floral Co., some very interesting points being brought out by Mr. Sked.

At the night session a paper by Mr. J. Berry was read, relating to outside roses, and Mr. Berry certainly did justice to the subject. Next on the program was an interesting paper by Mr. Wilmore on dahlias. On account of ill health Mr. Wilmore could not be present and his paper was read by the secretary.

The following officers were elected: President, J. A. Valentine, Denver; vice-president, W. H. Evans, Colorado Springs; second vice-president, G. Fleischer, of Pueblo; treasurer, R. Mahan, Denver; secretary, V. A. Benson, Denver.

After a vote of thanks to the entertainers of the meeting, the Society adjourned.

ILLINOIS STATE FLORIST ASSOCIATION

A new organization formed a few weeks ago and one that is full of business. They already have a bill for an appropriation before the legislature which bids fair to pass. Much credit will be due to the lobbying skill of the association's committee should the bill pass; they went at it like veteran politicians.

To those concerned I beg to advise that the association is now duly incorporated under the laws of the state; the proper papers of same now being in my possession.

We already have fifty members and solicit the application of every florist in the state of Illinois. Send same at once to H. Hasselbring, Dept. of Botany, University of Chicago, Chicago, Ill.

JAMES HARTSHORNE.

NEWS NOTES

Joseph E. Pollworth, secretary of the C. C. Pollworth Company, was married to Miss Alma G. Yahr, at Milwaukee, on April 3.

A big exhibition is planned for next fall at St. Louis. The premium list already amounts to $2,300. The show officials are Otto G. Koenig, manager, Fred. Meinhardt, superintendent; Fred. C. Weber, treasurer; Theodore Miller and E. W. Guy, assistants. Much interest is already manifested in the project.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Well, well! At last we are on the right track. Efforts are being made to establish base-ball teams to represent the two wholesale flower markets of Boston. For years have we needed some diversion from the steady grind of business. Earnest efforts will be made to pull off a series of games this summer between the two markets, and the stall holders and patrons of each establishment should encourage the spirit in every way, even though they can't tell a baseball from a hickory nut.

Here is a new method of carnation culture as practised by Mr. Oswald Ralph of Weymouth. Mr. Ralph strikes his cuttings late in August or the first of September, and when well rooted, plants them in beds with violets. When the violets are thrown out the following spring the pinks are left in and come in flower in June, continuing until the following year, when they are replaced with violets. Fine pinks during the summer months as well as the winter are the result of this cultivation. Herbert Capers is salesman for Mr. Ralph in Music Hall Market.

Thomas Cox of Dorchester is supplying his customers with some fine spirea. Mr. Cox brings his spirea clumps in the house from a cold frame about the first week in January, and puts them under a bench in a cool house. When they begin to start good root action, and the leaf stalks appear, he pots them in 8-in. pots or boxes and places them under the benches of a warmer house. When the stalks are about three or four inches tall he places them on the bench, and grows them at a temperature of 60°. Mr. Cox allows from seven to ten weeks for spirea to flower from the time it is brought in the house.

THOS. F. MATTHEW.

NEWPORT PERSONALS

Carl Jurgens, Jr., of Newport, R. I., will be married to Miss Flora Hubbard, at Washington, D. C., on April 10.

Mr. Thomas Knight, representing Julius Roehrs of Rutherford, N. J., stopped off at Newport on his way home from the Boston Exhibition.

Mr. James J. Sullivan, head-gardener for Mrs. Ogden Goelet, has just been informed that Mrs. Goelet will not occupy her Newport residence this summer. This is a matter of much regret as this is one of the show places of Newport, and the absence of Mrs. Goelet will be considerably felt.

The Executive Committee of the Newport Horticultural Society have completed the schedules of premiums for the two exhibitions to be given by the Society. Both these exhibitions are to be held in the Casino. Several novel features are to be introduced this year, among these will be a class for planting at the outside entrance to a residence. In this class Miss Alice Ketellas offers as a first prize a silver cup, and the Society a second prize of $20.00. Much interest is shown in this class, many wondering what exhibitors will use in planting, because the prize is to be given on the condition that no evergreens be used. D. M.

BUFFALO PERSONALS

Buffalo Florist Club mourns the loss of one of its members, Donald Newlands, after a prolonged illness.

Inspired for political fame, our friendly Andy Adams, is looking for the nomination of supervisor in his district "here's hoping."

Two Fine Plants

Making a trip to several of the conservatories in Brookline a few days ago, we called at the A W. Blake estate and on going through the greenhouses we were very much interested in two specimen plants of Cypripedium, one Cypripedium Harrissianum Dauthierii carrying fifteen flowers, the other plant Cyp. nitens carrying seventeen flowers. Both these valuable varieties were in the pink of condition, and being armed with our kodak, and obtaining permission, we were enabled to take a photograph, as well as to take various notes of culture as practised by Mr. Wild, the late gardener, and which we have pleasure in reproducing.Cypripedium nitens (C. villosum × C. insigne Maulei). The characteristics of the pollen parent preponderate, but the flower has the lustrous surface of C. villosum which suggested the name nitens (shining). This is a valuable midwinter flower ing plant following Cyp. insigne, and it is fully as easy of culture. A temperature of 55 degrees night seems to suit it. The plant was grown in half peat and fibrous loam and received abundance of feeding during the growing season

Cypripedium Harrissianum Dauthierii. (C. villosum × C. barbatum= Harrissianum Dauthierii). Sub-variety distinguished by color only. A very free flowering variety. The plant illustrated was carrying fifteen flowers grown in an 8-inch pot, rather later in flowering than nitens grown under same conditions, helping to prolong the season of the small collection of plants. Well adapted for any one wishing to grow orchids at small outlay

Acacia pubescens

Both varieties mentioned above could be grown to advantage in a temperature of 5 degrees lower than the majority of Cypripediums, a point worthy of commendation to amateurs.

Passing from the palm and orchid house to the carnation house we found a splendid specimen of Acacia pubescens grown in a tub in full flower. It was a sight beautiful to behold. No photograph would do justice to this the most graceful and beautiful of all the acacias, and it is only to be regretted it is not more generally grown, not only in the private collections, but also in commercial establishment where specimen plants are in demand. At present it is seldom met with in private collections in this country It is easy of cultivation, free flowering, very fragrant and one of the earleist of its species to flower while its habit of growth aud gracefulness are sufficient to recommend it. A few remarks Mr. Wild's mode of culture will, I am sure, prove interesting to our readers.

Cypripedium Harrissianum Dauthierii

We repot or rather retub this plant every second year about the first week in June The old soil is well washed out with the hose which does not damage the roots. The plant is then planted outside in a partially shaded position and kept well syringed and watered. It is then lifted again during the first week in September and retubbed, using as a compost good fibrous loam and leaf mould, some bone meal, and ufficient sand to keep the compost open. It is wintered in a temperature of 45 degrees night, with plenty of ventilation during the day, and the plant is pruned or cut back after flowering.

Acacia pubescens is a somewhat difficult plant to propagate, hence it is always scarce. It can be propagated from root cuttings or cuttings from the plant, being careful to select the half-ripened wood just before growth commences. D. Lumsden.

STREET AND WAYSIDE PLANTING

Read before the North Shore Horticultural Society by J. A. Pettigrew, March 17, 1905

Recognition of the value of trees as an adornment to streets, in this country, dates from an early period. In Mr. Albert Matthews' intensely interesting address on the history of the trees of Boston Common, delivered last year before the Boston Common Society, we find that, as early as March 3, 1655, interest was manifested in the preservation of trees. At a Town Meeting held that day, an order was passed, "That whosoever shall cut, hack, or hew any of the trees planted in the Neck, shall pay for every tree so spoyled twenty shillings, the one-half to the informer, the other to the town."

On May 12, 1701, a by-law was passed, that "no person shall lop, peel, girdle, or deface any of the trees now standing or that shall hereafter be planted or set by order of the Selectmen, or by their approbation, upon any part of, or place in, the common ground of the town, under penalty for every such offense."

Although not so stated, it is presumable that these were public trees; but, whether or not, the order reveals to us the fact that the early pioneers of Boston recognized the value of trees as an adornment to the town, and the necessity of their preservation.

In one respect we have not progressed much since that day, two hundred and forty-seven years ago, twenty-five years after the first settlement was made. We have with us to-day, as the early founders of Boston had, in 1655, those who "cut, hack, or otherwise 'spoyle'" trees; and it is to be feared that their numbers have increased since the days when the Puritans made the order. We have also, in goodly numbers, the small boy with his ever-ready pocket-knife, to whom the smooth stem of a tree is a sore temptation — a temptation as irresistible as was the cherry-tree to George Washington in his boyhood days.

Then, too, the trees on the curb of every street bear ghastly evidence of the gnawing of generations of unhitched horses; indeed, it is not an uncommon thing to find hitching-rings driven into fine old trees.

In addition to the despoilers of trees of "ye olden time," we have the modern gas companies, and the City sewerage and water departments, whose employees, seldom giving thought to the destruction they are working, cut off more roots from our street trees than would be necessary were the work done under intelligent direction.

To counterbalance, as it were, the

lopping off of the roots under the surface, we have the cutting and slashing of the branches by employees of the various corporations whose business requires the use of overhead wires.

When one sees these battle-scarred veterans of the streets enduring ill-use, year after year, and sometimes decade after decade, yet still putting forth leaves in the spring, in a struggle for existence, one cannot but realize that nature has endowed many of our trees with remarkable endurance and great adaptability for planting in our streets.

Trees may be ranked among the noblest products of nature, and this adaptability for beautifying and shading streets is a great boon to city dwellers, and one that is not appreciated to the full; else, why should such mutilation be perpetrated? or why should it be permitted by those in authority, whose duty it is to protect the interests of the public? Ignorance of trees and their requirements undoubtedly has much to do with it. Carelessness, thoughtlessness, and the fierce fight for gain are among the causes which despoil our trees; and when we consider that, in addition to this danger from the hand of man, there is still to be added the ravages of insects and lower organisms — the wonder is that so many beautiful trees are to be found in our streets.

In addition to shading our streets and waysides, trees lend a softening effect to the hard, and too often inharmonious lines of closely built-up streets, and thus appeal to the artistic sense, both in summer and in winter.

Trees, too, through their foliage, evaporate a great deal of water, which they draw from the ground. Thus, while cooling the atmosphere, they at the same time sweeten the ground by draining off stagnant water. They also consume noxious gases and send out those that are life-giving.

In support of the sanitary value of trees in the public streets, may be cited the resolution passed by the New York County Medical Society: —

"*Resolved*, that one of the most effective means for mitigating the intense heat of the summer months and diminishing the death rate among children is the cultivating of an adequate number of trees in the streets."

This may be further illustrated by the fact that the bill which was presented to the New York legislature in 1899, to put the care of street trees in charge of the Park Commissioners, was drawn by a physician, a member of the State Board of Health, and was introduced merely as a sanitary measure.

Mr. Milo R. Maltbie, Assistant Secretary of the New York Art Commission, as agent of the Commission and under the auspices of the State Department of the United States, went to Europe, two years ago, to investigate the progress of civic improvement in the cities of northern Europe. In his report he says: "That trees and green grass-plots should be used on all streets and avenues wherever possible is so apparent that it hardly needs mention. Nothing adds so much to the beauty of a street, or so tempers the heat and glare of hot summer days, as lines of wide-spreading trees and plots of green grass, with an adequate supply of benches for those who wish to rest and enjoy the changing scenes.

"The ample provisions made by many European cities have turned many boulevards into continuous park systems."

It is to be regretted that in laying out new streets, the tendency of the day is toward the narrowing of the sidewalks, and the omission of any provision for a tree-planting space. Boston with its suburbs is suffering from this evil, which portends badly for the beauty of its streets in the future; the absence of provision for planting will quickly relegate such streets to squalor and obscurity.

This tendency of the present day is in striking contrast to the early public records, which demonstrate the fact that the Puritan Fathers, in the midst of their strenuous life, had in mind the beautifying of their surroundings by the planting of trees; and that they ordered, through their selectmen, that trees should be planted by the town. Quoting again from Mr. Matthews' address: "On February 11, 1711 or 1712, it was voted by the selectmen that 'a convenient number of trees be provided to plant on the sides of each burying-place where it shall be thought proper.'"

That the early settlers of New England transmitted their love for trees to subsequent generations, the magnificent elms to be found in our New England towns, give evidence. The New England elms are noted, far and wide; the charm they add to the wayside is beyond price. Is it not important, then, that every effort should be made to encourage the growth of and to protect, all wayside trees?

Washington's trees, as an attraction to the city, divide honors with its best architectural features; not because of the individual beauty of the trees as fine specimens, but because of their value as a whole in the adornment of city. This results from an intelligent control of the planting and care of the trees, the work having been placed in the hands of competent commissioners, among whom have been numbered John Saul, William Saunders, and William R. Smith the only survivor. The results accomplished in Washington are just as attainable in any other community. All that is necessary is wise legislation and the education of the people to the importance of the subject.

At the present time, great interest is being manifested, throughout the country, in the preservation of objects of natural beauty; in the regulation of the bill-board nuisance, which everywhere disfigures the landsacpe; and in the general improvement of towns and cities along æsthetic lines. This betokens a general public awakening to the importance of civic beauty.

Societies having these objects in view are being organized in every direction. We are glad to note that a large share of the attention of these societies is devoted to the planting and preservation of trees. These influences, properly directed, cannot but have a good effect in the furthering of the work of making the city (and the country also) beautiful.

Laws have been enacted in Massachusetts making it obligatory on the part of towns to elect tree wardens, who shall have the care and control of all public trees, except those already in charge of park commissioners; while, elsewhere, throughout the country, laws and ordinances have been framed, looking to the care and planting of trees in the public streets and highways. The Massachusetts statute is mandatory with regard to the appointment of a warden and the scope of his power. The provision for furnishing funds, for planting and care, is permissive, which will largely induce negative results. The idea, however, is sound, and when certain of its defects have been remedied, and the knowledge of tree culture increased, its influence on civic beauty will be very powerful.

But the simple passage of a tree-warden law does not alone insure that there will be protection; that trees suitable in kind will be planted; or that their requirements shall be furnished to them. Let it be a popular service to see that *competent* wardens are elected, and that their duties are faithfully performed. Laws and ordinances are of little avail unless supported, in their execution, by the hearty coöperation of the public. The requirements of the trees are simple: good soil, and protection from the vandal hand, is all that is necessary for favorable results. But money must be provided to pay for these, as well as to meet the expense of pruning and fertilizing; also to combat the ravages of insects, which infest trees in towns and cities — a consequence of the disturbance of nature's balance, resulting from the banishment or the destruction of insect-eating birds.

Tree-planting and improvement associations have done much to advance the cause of tree-planting in public streets. The Brooklyn Tree-Planting Association recommends the coöperative plan. Under this plan competent foresters may be consulted, or engaged; and trees may be bought, and the ground prepared for planting more cheaply than can be done by individual effort. Associations of this character, however, are difficult to organize. Not everyone possesses enthusiasm enough to enter into the work of planting young trees; the result seems too distant, and planting for posterity appears, to many persons, too great a self-sacrifice.

In the absence of competent civic control of tree-planting, the coöperative plan, or any other plan looking to the planting of trees in the streets, should be adopted by every citizen who has the interests of his city at heart. No excuse can be offered for the absence of trees on every suitable street, and on every roadside. The matter is easily within the power of each municipality to correct.

[Continued next week.]

CONIFER SEED CROPS IN EUROPE

We clip the following from the February report of Conrad Appel of Darmstadt; —

Pinus sylvestris. — The crop is a very short one in those localities which have produced some seed this year, and the cones fetch very high prices, although they do not contain as much seed as in previous years. The quality, however, is very good. Picea excelsa yielded more seed than the aforementioned species, yet not as much as had been expected, for the quality varies. Larix europaea. — Tryol, the principal country for the production of this seed, has yielded a small crop, but our home crop has, after many years, once again turned out very satisfactory; thus the home-grown product fully equals the seed of Tyrol in value. Abies pectinata produced a limited quantity of cones which are partly rather poor in quality. Pinus strobus. — A very limited quantity of the home-grown seeds appeared on the market at very high prices. Pinus austriaca yielded a very small crop, causing prices to rise high; the quality is a good one, however. Pinus maritima, montana, and P. laricio grew sufficient seed, while the crop of Pinus cembra is small.

EASTER PLANT MARKET REPORTS

Easter flowering plants in different sizes are quoted by growers as follows:

BOSTON.—Azaleas 5 to 8-in., $.75 to $2.50; 9 to 10-in., $3.00 to $5.00; hydrangeas 8-in., $1.25 to $1.50; rhododendrons $2.00 to $4.00; genistas 5 to 8-in., $.75 to $2.00; acacias 8 to 10-in., $2.50 to $5.00; astilbes 50c.; Crimson Ramblers $1.00 to $4.00; pot roses $.75 to $2.00; bulbs in pans, 50c.; lilies 12c. per bud and flower.

BUFFALO. — Azaleas 5 to 8-in., $1.00 to $3.00; hydrangeas 4 to 8-in., $.50 to $2.50; bougainvilleas 5 to 7-in., $2.00 to $3.00; lilacs 5 to 8-in., $2.00 to $5.00; rhododendrons 5 to 8-in., $1.25 to $4.00; daisies 6 to 8-in., $1.00 to $2.50; genistas 4 to 7-in., $.25 to $1.00; acacias 6 to 8-in., $1.50 to $3.00; astilbes 5 to 6-in., $.25 to $.50; Crimson Ramblers 5 to 8-in., $.75 to $3.00; pot roses 5 to 6-in., $.50 to $.75; tulips in pans, 8 to 10-in., $.50 to $1.00; lily of valley 6 to 8-in., $.75 to $1.00; hyacinths 6 to 10-in., $.75 to $2.00; daffodils 6 to 10-in., $.50 to $1.50; lilies, 15c. per flower.

CHICAGO. — Azaleas 12 to 14-in., $.75 to $1.00; 20-in., $3.00 to $4.00; hydrangeas 6-in., $1.00 to $2.00; 8-in., $3.00 to $4.00; lilacs $1.00 to $2.00; rhododendrons $1.50 to $5.00; daisies $.75 to $2.00; genistas $.35 to $1.00; acacias $1.00 to $2.50; astilbes $.50 to $1.00; Crimson Ramblers $1.00 to $2.50; pot roses 5-in., 25c.

PHILADELPHIA. — Azaleas 6-in., $1.00; 7-in., $1.50; 8-in., $2.00; 10-in., $5.00; 12-in., $15.00; hydrangeas, 8-in., $1.50; 10-in., $3.00 12-in., $5.00; 16-in., $20.00; bougainvilleas, 10-in., $10.00; 16-in., $25.00; lilies 12c. per bud and flower; rhododendrons 7-in., $1.50; 8-in., $2.00; 10-in., $3.50; genistas, 6-in., $.75; 7-in., $1.00; 10-in., $5.00; astilbes 7-in., $.50; Crimson Ramblers 7-in., $1.00 to $2.00.

RUTHERFORD. — Azaleas 12 to 14-in., $1.00; 24-in., $6.00; hydrangeas $.75 to $2.50; lilacs $1.00 to $2.50; rhododendrons $1.00 to $8.00; daisies 24 to 30-in., $2.00 to $3.00; Crimson Ramblers $1.00 to $15.00; tulips in pans, $1.00 to $2.00; lily of the valley, 12-in $1.00 to $2.00; hyacinths, $1.00 to $2.00; lilies, 10 to 12c. per flower.

EASTER STOCK IN CHICAGO

The Geo. Wittbold Co. show a small Easter stock as compared with the immense lots grown heretofore. This enterprising firm has opened more retail stores, and the bulk of their crop is sold direct to the retail customer. Azaleas will be their main stay, and ericas, wisteria, Dutch hyacinths, and tulips will be found here in abundance.

W. H. Palinsky will have a good supply of Baby Ramblers, rhododendrons, hydrangeas and spiraeas, with no lack of bulbous stock.

Peter Sroczynski makes a specialty of hyacinths and tulips in pans and pots, and shows superior daffodils. His lilies and American Beauties in pots are well grown.

Frank Oechlein is a grower on whom many of the smart western retailers count every season. His Clothilde Soupert roses, in five-inch pots, lilies, and Deutzia lemonii are superb.

Sam Pearce is far-famed for his lilies. No scarcity of Easter stock here.

At J. F. Kidwell & Bros. spiraea is a great favorite, and they will have some fine plants. They are also well supplied with bulbous stock in single pots and pans.

Vaughan & Sperry show the popular violet plants in pans, as well as Crimson Ramblers and American Beauties in pots.

E. F. Winterson Co. will handle an extra good grade of lilies grown by a specialist.

L. Juergens, besides his enormous Easter crop of lily of the valley, will have an abundance of tulips and daffodils

Stollery Bros.' special Easter tulip will be in full crop. A novelty with this progressive firm is an egg-shaped pot sown with grass seed, which makes an appropriate Easter oddity.

AMONG THE GROWERS

There comes a time in every one's life when the tired mind wearied with hurly burly of modern business and commonplace surroundings, steals away from the tasks in hand, and refreshes itself with sweet memory pictures. As HORTICULTURE's representative I started out, a pleasant trip indeed, on a visit to some of New York's plant growers. It is no ordinary vacation trip that one makes when he wends his way into the vast establishment of Julius Roehrs, with its nursery blocks of fancy conifers and bays, and greenhouses divided in large ranges for orchids, palms, and stove plants. At the present the most space is given over to Easter stock. The genial proprietors, Julius Roehr's Sr., and Jr., while orders piled high on the office desk, yet extended to HORTICULTURE'S representative a royal welcome and escort around the interesting place.

There are Easter lilies thousands in number, just right in height for pot plants with well set heads; a magnificent stock of hydrangeas fills two houses. Of azaleas they are there by thousands in all sizes and shapes, of standards and pyramids. It is here the smart buyers look for well-grown ericas and their block of E. Cavendishii has an exclusive tone. That fine rhododendron Prince Camille de Rohan is also seen in remarkable profusion of bloom. The large store-house was filled to overflowing with orders for immediate delivery, bulbous stock, fancy double tulips, hyacinths, lilac, and ericas, some fine mixed plants arrangements of camellias and palms and ferns were seen. Crimson Ramblers and H. P. roses were very fine.

The surprises that attend one's visit to Bobink and Atkin's Nursery are many, here blocks upon blocks of conifers, rows of shrubbery run in all directions, and vast new plantings of conifers, lend an interest to landscape gardeners. At every turn some group or collection of exclusive stocks, tempts the epicurian of our profession. In the cool store-sheds were thousands upon thousands of fine two and three year old rose-stock in dormant condition, standards, ramblers, sweet briers, etc. An interesting collection of hardy perennials in large assortment is found here. In the greenhouses a fine batch of the Transvaal Daisy (Gebera Jamesoni) was in full bloom. Mr. Atkins says it has kept up in full flower all winter.

H. C. Steinhoff is far-famed for his ramblers and H. P. roses. Three thousand Magna Charta are being grown for Easter, such stock as fills a plant-lover with delight. The Crimson Rambler is seen here in various trained forms. There are crosses six feet high that seem to me the ideal Easter plant where a fine show is wanted; some beautiful plants are trained in basket shape, others globe shaped, pyramids and fans. Mr. Fred Steinhoff says all their rose stock is grown at their own nursery. One house, 56 × 350 was devoted to Magna Charta. Among the rhododendrons was seen Mad. Wagner, one of their favorites, color light rosy lilac; buds are a beautiful dark red before opening, thus making a striking color combination.

One of the most attractive places I visited was J. M. Keller's. Here the numerous houses were filled with ramblers, lilies, bougainvilleas, genistas, etc. A fine batch of that grand white marguerite Coronation, plants 3 feet high by 8 to 10 feet in circumference; lilies grown in 6-in. pots, and averaging sixteen flowers to the pot; boronia elatior grown as nowhere else; hundreds of Crimson Ramblers, ericas, snow balls, wisterias, dwarf azaleas, and rhododendrons are only a few of the specialties grown for Easter.

Anton Schultheis' immense establishment is filled to repletion with thousands of fancy plants. Two houses are devoted to hydrangea rosea, Otaksa and azurea; four houses given over to magnificent trained specimen of Crimson Ramblers in quaint and interesting shapes. Baby Rambler is also a big item here, the variety being grafted on manetti stock. Of yellow marguerite there is an entire house full. Heather is the great specialty here, and the list of varieties grown is very extensive. The new German wallflower is here, covered with a mass of velvety crimson flowers, its delightful fragrance filling the air. The flowers are of enormous size, coming early enough to be used as a Christmas plant. One entire range is devoted to azaleas, genistas, boronias, lilacs, and lilies, H. P. roses and rhododendrons, Dorothy Perkins, Farquhar, and Philadelphia rambler roses complete the list.

At L. Dupuy's place an army of smart retailers make annual pilgrimages. The chief attraction here is the ericas, for which Mr. Dupuy is far-famed. Genista are a mass of gold. Deutzia Lemoinei is also a favorite here. Crassula coccinea is the novelty for this year. It is a plant of much substance, will stand hot weather; flower resembles erica, erect, pink. Mr Dupuy thinks this will be a leader in a few years. Hydrangea Thos. Hagg, also H. rosea Baby Rambler roses, white daisies, the new Countess Chambora (the fern-leaved daisy) are all seen here in profusion.

At John Scott's lilies are the leader. The fern Scottii were never better than now; thousands upon thousands are grown here and among this vast stock not one frond was seen that reverts to the old type.

Vacation days like these are over all too soon but not so with their memories.

FRED LAUTENSCHLAGER.

FLORISTS' CLUB OF PHILADELPHIA

The coal question was scheduled for the meeting held April 4th, but on account of the defection of Chas. D. Ball the discussion was deferred until some future date.

Henry Eicholz of Waynesboro, requested the club to enquire into the authenticity of the Dorothy Faust chrysanthemum, presumed to be the same as Mrs. Robert McArthur, and offered to send twenty-five plants for testing, to a disinterested party, to be grown alongside Dorothy Faust. In the discussion which followed, one point worthy of note was brought out by Fred Ehret, who said that the Dorothy Faust, as he knew it, was a good shipper and never dropped its petals, whereas the McArthur, as far as was known, was a poor shipper and very apt to drop its petals.

William P. Craig, who is sending out Dorothy Faust, said he was perfectly willing to have the two varieties tested, side by side, as he was quite sure they were distinct. Edwin Lonsdale, the superintendent at Girard College, was suggested as a good authority to make the test, and the members acquiesced in this idea.

John Kuhn showed a very floriferous form of the semperflorens Begonia, almost equal to the Lorraine type, a pure white, and a very promising thing.

W. R. Huttenlock was elected to membership, and John Thatcher, Joseph T. A. Hagen, and Charles Brechemin were proposed for election at next meeting.

Random Notes Abroad

In the months of February and March of last year, in the cities of Hanover and Bremen, very nice florists' window decorations were to be seen. Lilacs were in plenty and of fine quality, indicating that the same is in much request by the flower consuming public there, and the forcing of such plants well understood by those who produced them. Great quantities of acacias in the cut state were also displayed in most florists' of any note, Acacia dealbata leading in quantity, other varieties supplementing in lesser quantities. Those showy, fluffy, yellow flowers evidently are very popular, otherwise the profusion displayed could not be accounted for. Heaths and epacris in variety were well represented and splendidly grown. Cut carnation flowers, however, were short in quantity and inferior in quality to our products, the varieties in many cases exceedingly coarse, ragged in form, and without character; and as for color, some of them were positively ugly, ranging from a nameless smoky color to a streaky magenta shade. Their inferiority in weakness as well as length of stem to our get, is easily explained, as doubtless it can largely be attributed to their less sunny skies, and is therefore in a measure excusable. The streaky colored or rather the non-colored varieties alluded to are neither to be explained nor excused, it appears to me.

Roses were slimly represented in variety and quantity and, like the carnations, deficient in quality, Perle des Jardins being the only exception. This variety was to be seen in quite large quantities and very passable in quality, and a welcome sight it was, reminding me of old times in Yankee-land, where at one time it held the premier place in its color as a winter-flowering rose — now, alas, practically relegated to the backwoods of oblivion in the latter country as a winter-flowering subject. The buds of this rose were of good size and of exceptionally fine color, the stems being somewhat short but sturdy, showing a coppery color that seemed to indicate that they were cut from the open, as I presume they were — from the south of Italy or France I suspect.

I desired to settle this question beyond a doubt and often loitered around the windows for a few minutes, patching up in mind the necessary inquiry in the vernacular of the land I was sojourning in. But not succeeding to my satisfaction, and fearing a miserable failure and a possible embarrassment from which I could not easily extricate myself, I gave it up in disgust. There were other things on which I desired to get information even more particularly (but failed for the same reasons) and none more so than the splendidly grown ranunculuses and anemones displayed in great quantities and variety. They were, indeed, the only things I saw that I could say the florists on the other side were ahead of us in. The display of those flowers, seen at times, was really brilliant. The flowers were quite large and of a stout, sturdy character, embracing numerous self-colors, as well as combinations of shades; doubles and singles were in evidence, the former being somewhat more pleasing if not more brilliant. I suspect that they also were from the open and came from summer climes; at any rate, I mentally noted at the time that they were worthy of more extensive trials in the United States as winter or early spring florists' flowers. As far as I have been enabled to observe hitherto, this has not been accorded them, either for inside purposes or outside display in the flower garden. For the latter purpose in our northern climes, it is necessary to keep them out of the ground until late spring or early summer, until the chilly effects of winter frosts have passed away.

My experience has taught me that anemones, when grown for winter use indoors, must be kept close to the glass, or in as close a position as may be had. They require also a cool temperature, — 45 degrees or less will suit them. They detest close and muggy surroundings, and in such are extremely susceptible to green-fly, growing tall and straggly, tumbling in a disorderly manner, every-which-way, over the receptacles that they may be growing in. On the other hand, within the environment of a cool, bright, and airy house, they make a sturdy and compact growth, and are not nearly so liable to be infested by green-fly.

I have in mind a particularly long shelf, in as long a house, suspended two or three feet from the ridgepole, that would in my opinion be the ideal place in which to grow these splendid subjects. I was disposed to keep this idea and ideal shelf to myself in case I might go into business yet, and thereby make a hit, but I feel more magnanimously inclined now towards my fellow-craftsmen and strugglers for honest cash! Levity on the part of your readers in regard to this "make a hit" proposition of mine is out of order. I fancy that I hear them snickering at it as being a mere joke — not a bit of it — the feeling is quite sincere, and the shelf referred to is in Mr. William Nicholson's long houses in Framingham, where he grows freesias successfully. There are many such long houses and many have such shelves that would do equally well as the Framingham houses.

Returning to other things that favorably or otherwise struck me in the fatherland, I would mention the exaggerated extent to which flowering plants were caricatured and swaddled in ribbons. Some forced lilac plants were so excessively swaddled that my first impression was that they were so protected from a possible attack of pneumonia. Other plants underwent the same fate, their whole individuality being thus taken away, and what was intended to be a plant became a bundle of ribbons. The matching of the ribbons with the complexion of the respective plants was all right, and in good taste. It's the lavish manner in which it was used that I find fault with.

I admit that an appropriate piece of coloring is not at all out of the way as an additional adornment of a plant, provided that it is kept artistically within bounds. Thus done it will appeal to some tastes, and doubtless impart an additional attraction that might stimulate a sale. Other than this the practice is, in my humble opinion, not a good one, and not to be encouraged. The receptacles in which plants in florists' windows or gentlemen's homes are kept may admit of more elaboration, but it's within the bounds of possibility that those may be overdone to the disadvantage of their occupants.

K. Finlayson.

WANTED

A young man to take care of Orchids; must be thoroughly competent, of good habits, and interested in his work. One with an English training preferred. Send references to

Wyndhurst Gardens, Lenox, Mass.

FOR SALE. — Five greenhouses stocked with carnations, roses, asparagus, etc., 5,000 feet of glass, hot water heat; 8 minutes walk from station, 1 minute from electrics; established 30 years. Ill health cause of sale. A. F. BELCHER, Foxboro, Mass.

WANTED. — Rose and Carnation grower. LITTLEFIELD, Worcester, Mass.

WANTED. — A young man used to vegetable garden work on a private place. Single. Apply stating wages to HORTICULTURE, No 140 G, 11 Hamilton Place, Boston.

WANTED. — First-class rose grower, as my present foreman, Mr. T. L. Williams has decided to retire from business. Reply to John H. Taylor, Bayside, N. Y.

Are You Going.... To Build?

I am interested in a glass factory in Jersey. I want to hear from you before placing your order for glass. I think I can put you in the way of saving some money. State quantity, quality, and size wanted. *NOT IN THE TRUST.*

Address:

George C. Watson

JUNIPER AND LOCUST STS. **Philadelphia, Penn.**

The Grand New Pink Rose we disseminated Last Season?

WHAT IT DOES FOR US

It grows stronger and more vigorous than any Rose we ever grew.
It produces more high-grade and long-stem blooms than any Rose we ever grew.
It produces as many flowers as Bridesmaids planted in same house, same date, same quality of stock.
It is doing well with nearly every one that planted it last season.
It is in a class by itself and has COME TO STAY.

WHAT IT DID AT BOSTON

CUT-FLOWER MARKET REPORTS

BOSTON Weather conditions are very bad and effect the market seriously. Stock is very fine; but supply is far greater than demand. With the coming of Easter, prices and conditions are expected to improve.

BUFFALO A slight improvement in business has been noted the past week. Flowers of all kinds could be obtained at reasonable figures, and everything except lilies and Southern daffodils was fairly cleaned up. Fine Beauties are coming in but low prices rule. Violets move slow at $2 to $4.00 per thousand. The prospect for good Easter business looks bright.

CHICAGO The spring cut American Beauties is now on in full crop, and when large quantities are taken can be bought at less than quoted rates. Bride and Bridesmaid are equal to any demand. Carnations still drag, but are showing effects of spring sunshine. Calla lilies are slow stock. Easter lilies of good quality are not over abundant. Lily of the valley and violets are above the demand. In bulbous stock yellow is especially slow.

CINCINNATI The hot weather of the past week has forced into the market more flowers than can be disposed of readily. This is felt especially by the Easter stock of roses and carnations, causing them to come in so far ahead of time that a scarcity at Easter must be the result. Bulbous stock also comes in heavily, the growers finding it impossible to hold it back.

LOUISVILLE The warm weather of the past week gave a new impetus to business, and stock of all classes sold well. Roses and carnations were in good demand, and the supply has been fully adequate. Bulbous stock of good quality sold satisfactorily.

NEW YORK Roses of all kinds are plentiful. Carnations are slow, but it is anticipated that as Easter draws near they will be in demand. Violets are getting smaller, and it is becoming hard to dispose of the surplus stock. Bulbous stock, with the exception of Southern narcissus, is in lighter supply. Business generally is quiet.

PHILADELPHIA Market almost swamped with flowers the past week, some of it poor and not movable at all, while the best had a hard road to travel. The weather for a week has been the warmest in the memory of the oldest for March, — 88 one day, and for days 70 to 75. Southern daffodils an avalanche, and any price at all thankfully received. A few choice ones brought fair money, but majority of stock poor quality and mostly unsalable. Roses promise to shorten up this week, which will help other lines, and all hopes are now centered on having more seasonable weather.

BUSINESS CHANGES

Stocke & Bucksaht have started in the florist business at 3817 Lincoln Ave., St. Louis.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 · 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH. — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 **PLANTS.** — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅛- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

ASK FOR SPECIAL WORLD'S FAIR CATALOGUE No. 554.

TWEMLOW'S
Old English Glazing Putty,
SEMI-LIQUID,

For bedding glass in sash or for filling cracks or seams in roof joints or frames
OF GREENHOUSES OR HOT BEDS.

THIS **PUTTY** Is used in Machine or Bulb.

If too thick for bulb thin with a little Pure Linseed Oil, boiled.

So thinned it can be brushed into any crack or leak, making a solid filling.

THIS **PUTTY** makes a solid bed, impervious to moisture, and holds glass in its place, and will stop any crevice or fault.

When once set on dry wood it does not heave.

HARDY HYBRID PERPETUAL ROSES

English-grown Stock, low budded on Manetti, now ready for delivery. Strong two-year-old plants

EACH $.35; DOZ. $3.50; 100 $25.00

ALFRED COLOMB. Brilliant carmine-crimson; large.
BARON DE BONSTETTIN. Velvety blackish crimson.
BARONESS ROTHSCHILD. Pale flesh pink; very fine.
BEAUTY OF WALTHAM Bright light red.
BOULE DE NEIGE. Pure white; free-blooming, strong, vigorous habit.
CAPT. HAYWARD. Bright crimson.
CHARLES LEFEBVRE. Bright velvety scarlet.
CLIO. Flesh color, shaded in the centre with rosy pink.
DUKE OF EDINBURGH. Vermilion.
DUPUY JAMAIN. Very bright cerise.
EARL DUFFERIN. Velvety crimson, shaded maroon.
FISHER HOLMES. Rich velvety crimson.
FRANCOIS MICHELON. Deep rose.
GENERAL JACQUEMINOT. Brilliant scarlet-crimson.
GLOIRE LYONNAISE. Fine chrome yellow.
JEANNIE DICKSON. Rosy pink.
JOHN HOPPER. Brilliant rosy-crimson.
JULES MARGOTTIN. Bright cherry.
LA FRANCE. Bright lilac rose; centre silvery white.
LOUIS VAN HOUTTE. Deep red, shaded with maroon.
MABEL MORRISON. White, faintly flushed with pink.
MADAME GABRIEL LUIZET. Fine satiny rose.
MAGNA CHARTA. Bright pink suffused with carmine.
MARCHIONESS OF LONDONDERRY. Ivory white.
MARGARET DICKSON. White, pale flesh centre, exquisite form; petals large and of good substance.
MARIE BAUMANN. Rich carmine-crimson.
MERVEILLE DE LYON. White, with delicate blush shade in the centre; very large and full, perfect form.
MRS. JOHN LAING. Beautiful soft pink; large, full, and fine shaped, with a most delightful fragrance.
MRS. R. G. S. CRAWFORD. Rich, clear rose pink.
MONSIEUR BONSENNE. Velvety dark crimson.
PAUL NEYRON. Deep rose; very large.
PRIDE OF WALTHAM Delicate flesh color.
PRINCE CAMILLE DE ROHAN. Velvety crimson.
SENATEUR VAISSE. Dazzling red
SIR ROWLAND HILL. Port wine color.
ULRICH BRUNNER. Cerise red large, full, globular flower; one of the best red sorts.
VICTOR VERDIER. Deep rose centre bright rose.
XAVIER OLIBO. Velvety black shaded with amaranth.

LA DETROIT

The Grand New Pink Rose we disseminated Last Season?

WHAT IT DOES FOR US

It grows stronger and more vigorous than any Rose we ever grew.
It produces more high-grade and long-stem blooms than any Rose we ever grew.
It produces as many flowers as Bridesmaids planted in same house, same date, same quality of stock.
It is doing well with nearly every one that planted it last season.
It is in a class by itself and has COME TO STAY.

WHAT IT DID AT BOSTON

Won the Alexander Montgomery Special Prize, $25.00 for 25 Blooms of Best American Seedling Rose introduced in or since 1901.
Won the John B. Nugent, Jr., Special Prize, $25.00 for 25 Blooms of any Pink Rose not disseminated previous to 1903.
Won First Prize, $10.00, Class A 31, for 25 Cut Blooms.

PRICE: $12.00 per 100, $100.00 per 1000

Skibo

Only since its purchase by Mr. Andrew Carnegie has Skibo Castle and estate attracted the attention of many people in this country, yet to students of Scottish history it is known as a place where, ages ago, remarkable occurrence stook place — occurrences fraught with direct consequences to many participants. The latest historical event associated with Skibo Castle was the brief imprisonment within its walls of the great Montrose, while journeying a captive to his doom in Edinburgh.

Long ago, however, the "scene was changed"; Skibo Castle of the days of war and strife was demolished, giving place ultimately to a lordly residence (although no lords had their dwelling there), the abode of peace and quiet, where dwelt generations of men and women famous for many things, but conspicuously so for their generous natures, and a passion for gardening. It was to one of these men, Dempster, laird of Skibo, that Burns alluded to as, "Dempster, a true-blue Scot." It was this same Dempster who laid out the beautiful gardens and grounds for which Skibo has long been noted in the north of Scotland. Although beautiful gardens and grounds were there long before his time, it was he who planned and laid out, or had laid out, the place as it exists (with, but few alterations, as far as the grounds are concerned) today. A statement of this fact would seem a sufficient assurance of their merit when Andrew Carnegie, with millions at his disposal, has so far refrained from altering on attempting to improve them, reports to the contrary notwithstanding. It is true that he spent fabulous sums on alterations to the castle, and improvements on the estate, but the garden and grounds he has not molested, as they were already very well done.

Skibo Castle

Some may ask how can there be such a beautiful place in that far cold Northland; how can flowers and shrubs and trees grow where it is so bleak and cold? To those who know not whereof they speak these questions and comments may appear reasonable, while the statements will no doubt appear surprising, that the climate of that part of Sutherlandshire, where Skibo Castle is situated, is much milder than that of the State of New York; the winters are much shorter, resulting in earlier springs. It is true that there is less sun heat, a fact detrimental to successful operations in some branches of horticulture, but the ramifications of Jack Frost being correspondingly less felt, makes it easy to grow things there that have to be petted and cooped like early spring chickens here in Rhode Island — for instance, the laurel and holly. We mention these first because they are the commonest there. Hybrid perpetual roses and roses on trellises stand there without protection in the winter. Fuchias are there by the hundreds, although they have some light protection; but where would they be here after one winter such as this, protect them as much as we please? they would be in the dump. These, and many other things that might be noted as well, serve as instances to prove that the climate there is not so severe as many people might suppose.

The grounds and gardens of Skibo Castle are very extensive. The vegetable or kitchen-garden together with its hedges, trellises, herbaceous borders, and orchard, comprises between eight and nine acres; the flower-garden is nearly as large, with upwards of two hundred acres of policies traversed by walks beautifully kept. There are some magnificent trees there, some of the finest beeches I ever saw, and the yews, pines, and maples do not suffer in comparison, even in this country, the land of giant trees.

Long before my time the range of greenhouses at Skibo was extensive, and no doubt there have been additions since my recollection of them, but even then, to me, they seemed wonderful. There was a large conservatory, one greenhouse, two vineries, one peach and nectarine house, a stove, and a fern house, besides a melon house and a propagating house, the latter heated by a flue, the last remaining relic of other times, when flues were all they had. As I said before, this seemed a wonderful range of glass to me then, and at those who told me of grander things I simply scoffed, but in later

years, when I journeyed southward and beheld the immense ranges of glass there, my idol was shattered. Only, however, so far as the glass was concerned; the gardens and grounds I held to still, as I do today, taking them with their romantic, grand, and picturesque surroundings of mountain, river, and vale as my ideal, notwithstanding the admission of the existence in the south of Scotland, and to a greater extent still in England, of vastly larger and better appointed places.

Andrew Carnegie sought long and discriminately for a spot wherein to enjoy in peace and quiet the remaining years of an extraordinarily active life, and he found it in Skibo. Skibo has suffered not thereby. On the contrary, the fact of his acquiring the estate almost ensures its well-nigh perpetual maintainence of beauty and grandeur of olden times.

David McIntosh.

Decorative Art

We would suggest arranging tulips in a low receptacle as shown in the above illustration. The tall vase is a good example of how not to do it.

H. H. Battles.

Musa paradisiaca var. rubra

The Revue Horticole devotes a page in a recent number to a beautiful colored plate of a new red-leaved banana. One of these musas is at present to be seen in the Colonial Garden, where it is a very striking object. The plant is thus far known only to a very few. Its decorative effect is marvellous.

Its history is given as follows. It was first discovered in 1891 by the Dybowski mission party while at Brazzaville, preparing to go up the Congo river. On returning to France in 1892, M. Dybowski brought with him three clumps of which but one survived. This attracted great attention at the national horticultural exposition of 1893 at Paris. This plant unfortunately died afterwards. In 1899 and 1900 the Colonial Garden received several clumps, which under cultivation made a gratifying increase in robust plants, and so its perpetuity is now assured.

The colored plate shows the plant with fruit and a half-grown plant with well developed, broad leaves, similar to M. Cavendishii in appearance, but of more graceful habit. This novelty will unquestionably prove of great value for sub-tropical decorative planting. In the hands of the commercial grower, it is assured of a great future as the value of such a color in sub-tropical work is apparent to all.

J. F. Huss.

Paphiopedium Barbato-Rothschildianum

From the G. B. Wilson collection

One of the most noteworthy of the many meritorious Rothschildianum hybrids of recent introduction. Twin-flowered spike of good length. Flower very large and shapely. Dorsal sepal greenish yellow, heavily veined with blackish crimson. Inferior sepal same color. Petals slightly drooping, richly suffused with reddish brown at the tips, profusely blotched with almost black spots. Pouch of good size, and of rich vinous red color. Plant is of very vigorous habit, and free flowering.

Charles J. Bond

Luculia gratissima

The interesting articles in HORTICULTURE about this old-world favorite, have brought back memories which savor somewhat of an historical nature in regard to this particular plant and, as such, may possibly interest some of your numerous readers.

Back in the early seventies, practically the whole of the trade in Great Britain and Ireland were supplied with stock of this plant by the firm of Cunningham & Frazer of Comely Bank Nurseries, Edinburgh, at that time being carried on by Mr. Frazer alone. In addition to extensive nurseries containing choice blocks of rhododendrons and hollies, and a most complete collection of alpines and hardy herbaceous plants, there was (for that period) quite a range of glass, pits, and frames. In one of the old-fashioned lean-to's, were two enormous old plants of Luculia gratissima, and a smaller plant of another luculia, of which I cannot recollect the name, it had smaller and more lanceolate leaves and, while the flowers were smaller than gratissima, they were considerably darker in color. One of the gratissimas was planted in the back border, and was trained over the entire wall; the other was planted at one end and trained over a trellis through the center of the house. I have seen them in all stages, having occasion to visit Comely Bank, every two or three weeks, for the two years I was in Edinburgh and the glory of those two plants in bloom and the indescribable fragrance is yet a pleasant memory. Mr. Frazer propagated them from cuttings of fairly ripened wood, of two or three eyes, inserted in two-inch pots of sand and loam, and plunged in cocoanut fiber with a mild bottom heat.

Charles Ingram

British Horticulture

The Sweet Pea "G. O. M."

A movement is on foot to present a testimonial to Mr. Henry Eckford, the "Grand Old Man" of the sweet pea world, in recognition of his valuable services to horticulture. Although past his eightieth year, Mr. Eckford is as enthusiastic as ever in the culture of sweet peas. His long association with open-air life has secured for him the best of health, and an infectious geniality which has endeared him to his many friends. A friend of mine who visited him at his nursery at Wem in Shropshire, sometime ago, writes: "Whether the cultivation of sweet peas is conducive to cheerfulness I do not know, but the impression Mr. Eckford left on me was that I had seldom met such a happy old man before." As far back as 1870, Mr. Eckford, who at that time lived in Gloucestershire, began to improve the sweet pea The best collection at that time consisted of five varieties only, named White, Scarlet, Black, Painted Lady, and Butterfly. By crossing and intercrossing all these varieties he obtained in 1882 a distinct kind which he christened Bronze Prince. From that time novelties which have enhanced the popularity of this particular flower have annually been sent out from Wem, and a large number have been certificated by the Royal Horticultural Society.

Mr. Eckford's Methods

The seed is grown from the stocks raised at the Wem nursery in various parts of the country found particularly suitable. It usually takes about six years to finish a new type of sweet pea. February is the chief month for sowing, and sticks from six to eight feet high are utilized. The bamboo is kept in position by winding one or two rows of yarn around the sticks. The land is given a good dressing of farm-yard manure, with a little super-phosphate. The fact that Mr. Eckford has secured eighty gold and silver medals attest to the success attending his enterprise. A large staff is engaged in the despatch department, where seeds are sent away to all parts of the world. The chief novelties now being sent out are Romolo Piazzani, a splendid blue, Black Michael, red maroon, and David R. Williamson, bright indigo. Although Mr. Eckford's name is generally associated with sweet peas, he has also made a great reputation with his verbenas.

A Statesman's Hobby

When not engaged in his active campaign for tariff reform or at his Parliamentary duties, Mr. Joseph Chamberlain spends his leisure among his valuable collection of orchids at his mansion at Highbury, near Birmingham. When in London an orchid is daily sent to him for his button-hole, and this floral badge is always a welcome detail for our caricaturists, and is as inseparable from their drawings as his eye-glass. If this political celebrity would only adopt some cheaper button-hole there would soon be a rage to follow his example by his many admirers. The primrose is associated with the memory of the late Lord Beaconsfield, and is extensively worn in April on the anniversary of his death, to the great advantage of flower retailers. An orchid day, owing to the high prices, is out of the question. Roses are largely worn on St. George's Day, but these can be obtained as low as a penny each. Some admirers of Mr. Chamberlain have lately been exploiting his floral fancy in the interests of charity. They obtained an orchid and spray of maiden hair fern from the statesman, and this realised £4 for a parochial charity. The orchid was sold by auction for 5*s.* 6*d.*, and the maiden-hair fern for 1*s.* 6 *d.* The remainder was made up by charging an entrance fee to view the bloom, and also by selling photographs of the gift on postcards. After this it cannot be said that hero worship is flagging on this side.

Profitable Bulb Culture

The interior of the Savoy restaurant in London recently was embowered in a massive array of daffodils especially imported from the islands of Scilly, which are situated off the Cornish coast. At this season tons of blooms from the bulb farms are being imported into Great Britain. Some years ago when it was found that the islanders were being beaten by more favored competitors in the culture of early potatoes, the culture of bulbs was introduced. Many acres are set apart for daffodils and narcissi; during February and March, the islanders are kept busy in harvesting the crops, and sending boxes of blooms to compete against the early supplies from the south of France and the Channel Islands. The flower farms have brought prosperity to the islands, but there is a grievance owing to, it is alleged, the foreigners being able to consign their supplies to Britain at a more favorable rate than the Scillonians.

A Spring Show

There was a fine display, with a large attendance of visitors, at the show of the Royal Horticultural Society at Westminster to-day. Messrs. Wm. Cutbush & Son of Highgate, London, who have made a specialty of carnations, showed a new scarlet one, named General Kuroki which received an award of merit. It is an attractive bloom, with long stems, and a serviceable calyx. Other varieties shown in good form by the same firm were Enchantress, Mrs. Thomas Lawson and Marcia. The fine array of roses by Mr. George Mount of Canterbury, Kent, attracted attention, among the varieties being Mrs. John Laing, Mrs. R. G. Sharman Crawford, Capt. Hayward, W. J. Grant, Catherine Mermet, Liberty, and Niphetos. Considering the lateness of the season, Messrs. Cannell & Son of Swanley, were able to make a very meritorious display of 122 varieties of apples grown in Kent, "the garden of England." Mr. Cannell, the veteran head of the firm, not only grows good fruit but he is a strong advocate of its consumption for hygienic purposes. He experiences the best of health, and this he attributes to his being a vegetarian, an abstainer from intoxicants, and a non-smoker. As a florist, Mr. Cannell has achieved fame in the dahlia world, being one of the founders of the National Society interested in that flower, and having brought out many noted dahlias, chiefly of the cactus variety.

W. H. Adsett.

London, England, March 14, 1905.

Ferns for Every-Day Use

POLYPODIUM

Polypodium is the most extensive genus in the fern family. Nicholson, in his dictionary, says there are more than four hundred and fifty species known. They are divided into two very distinct sections; the first one — Phegoptertis — is the smallest, has underground and generally creeping rootstocks with deciduous fronds and much related to some Nephrodiums; it is sometimes very hard to tell the difference between one and the other. The other section is subdivided into other sub-sections, all evergreen, much of them found growing on tree trunks or covering rocks, and having their rootstock on the top of the soil or decayed matter on which they grow.

The fruit dots are round or oval, without indusium, variously set on each side of the stalks or midribs according to the section.

The deciduous species grow best in light soil, fibrous loam, leaf mould and sand. The evergreen epiphytal species like good fibrous peat or half-decayed leaf-mould with a little loam. When grown in pots, where they make nice specimens, shallow pots with good drainage are to be used, and the plants are set high, and the soil can be covered with sphagnum for the rootstocks to creep in; but their natural place is in the conservatory where they can be grown in cork bark on old tree trunks, on rocks or in baskets, where they show to advantage the creeping habit of their rootstocks.

They all can be propagated by division or by spores; from spores they grow nicer plants on account of the graduation of the strength of the fronds.

Phegopteris

P. trichoides from India, has fronds very long, with long stalk, scaly at the base and hairy at the top; the fronds are finely divided, of a light green color and resembles our felix fœmina.

P. decussatum from West Indies, P. Pleroideum from Columbia and Canada, P. punctatum from New Zealand and Australia, P. splendidum from Brazil, P. Wogelii from Fernando Po, and P. undulatum from Sandwich Islands, all have fronds from two to five feet long, broad and very ornamental, but seldom seen in cultivation.

Polypodium pectinatum

(Campyloneuron) Polypodium Angustifolium

Among the evergreen species some of the sub-sections are the following: P. pectinatum from West Indies and Central America, is a good fern which varies much in size and appearance; the fronds are generally erect, sometimes pendant, from one to two feet long and two to five inches broad; they are simply pinnate; the pinnæ set near together, of thin texture and dark green color.

P. Phyllitidis from Florida and West Indies has some resemblance to the "bird's nest" fern, only it does not grow in a crown. The slightly undulated fronds from one to two feet long and one to three inches broad, are entire, tapering on both sides, with a short stalk, and sometimes covered with little white dots on the upper surface. The fruit dots which are very apparent, are set in rows on each side of the side veins, extending from the midrib to the edge of the frond.

P. vulgare, although a hardy fern which grows wild over rocks and on the foot of trees all over the United States and Europe, has some beautiful forms like the Welsh Polypody and others, which do better cultivated in pots and under glass, where they make fine plants. Some of the best are:

P. v. cambricum, P. v. elegantissimum, P. v. trichomanoides, P. v. pulcherrimum, P. v. multifido-cristatum and others, all feathery and fringed.

Campyloneuron

P. angustifolium from West Indies and South America has the fronds long, undivided, and very narrow, pointed at the top and tapering at the base to a short stalk; they are of heavy texture and dark, glossy green color.

P. Fendlerii from Central America, P. lucidum from Central America, P. repens and from West Indies and South America are all of the same style, with undivided fronds from six to twenty-four inches long, narrow, tapering on both sides, of a strong, glossy green texture.

Polypodium Phyllitidis

(To be continued.)

HORTICULTURE

AN ILLUSTRATED JOURNAL
DEVOTED TO THE
FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

Now for Easter, hoping it will be just cool enough, just warm enough, just right for everybody.

Blooming pot-roses will be among the best Easter sellers this year and one of the leaders will undoubtedly be the "Baby Rambler."

Violet plants, like violet flowers, should be sold on the day they are received from the greenhouse or frame, ere they "haste to swift decay."

Our advertisement columns in this issue give evidence that, despite the most unprofitable spring season on record, the cut flower commission men have not lost courage. The distribution of the vast quantities of flowers used for the Easter festival would be an impossibility without this agency, which by energy and industry has widened the market for the grower and brought the remote dealer in direct touch with the sources of supply. The commission dealer is the producer's best friend and prosperity for one means prosperity for both.

The retail store man is not yet speeding at the rate of the plant grower, still if blessed with a due measure of foresight he can find plenty to occupy every moment of spare time in the Easter preparation. He will set his store in order and see to it that every requisite for the approaching days of hustle and bustle is conveniently at hand. He will have ordered all needed material well in advance and made provision for their careful handling and storage until required, bearing constantly in mind the truth that poor stock is always dear at any price.

The Easter plant grower will have no time now to read long-winded treatises on cultural subjects, but there are a few things that may be handed out to him, between jumps, that may benefit and cannot do him harm. Most important after the growing of good plants is proper handling and packing for shipment, so that, so far as lies in his power, satisfaction may be assured to his customer. In the meantime his reputation will benefit and the plant business in general will be profited by a systematic "hardening off," under reduced temperature, of everything he is to send out.

The cut flower, as an Easter staple, is just about what its producer makes it. If it is ever to regain its popularity the reinstatement must come through the universal discontinuance of the policy and practices that checked its prosperity. That many growers and dealers are ready to abandon the "hoarding up" system which has done more to bring store flowers into disrepute than all other agencies combined, is unquestioned, but little benefit can beexpected from partial reform; the regeneration must be radical and sweeping before general confidence in the holiday flower can be restored. Let the flower-grower who adheres to absolutely fresh stock go to the wholesale markets on the days preceding Easter and take a hand in helping to expose those who are recklessly compromising his business. Conditions this year are likely to furnish a good opening for missionary work in this direction.

"Watch your opportunity" is good advice for the advertiser. The Easter flower dealers who have taken advantage of the opportunity offered by Horticulture's popularity and wide circulation among the most progressive and intelligent florists, to bring their Easter announcements to the eye of responsible buyers, in this issue, have, we believe, chosen wisely and we appeal to our readers to demonstrate that the time and the medium were well selected, by ordering freely of such material as they may need from these enterprising houses. Most of them are well known throughout the land, of good repute, and proven reliability, and we take much pleasure in recommending them. Anything and everything that can possibly be required in the conduct of a successful Easter business can be secured at best figures without going outside the advertisers in this issue of Horticulture.

Do you like Horticulture? Then order it for your employees; tell your friends about it; or send us their names and we will mail sample copies to them. The larger our subscription list, the better paper we can afford to give you. The interests of Horticulture and its Readers are mutual.

All subscriptions received on and after April 15, up to July 1, 1905, will be dated to run till July 1, 1906. Thus those who subscribe at once will **receive Horticulture for fourteen and one-half months for one dollar.**

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

Dear Sirs, — Please discontinue my advertisement, as I have sold out all the stock. The large number of replies I received testifies to the value of your paper as an advertising medium.

Yours,

F. E. Palmer.

It is a pleasure for us to say that the results from our advertising in Horticulture have been eminently satisfactory, not only in the number of inquiries received, but in direct sales as well. We congratulate you upon the strong showing you are making,

Very truly,

The Dingee & Conard Co.

West Grove, Pa.

After Adjournment

The Lewis and Clark Journal promises "pansies as large as sunflowers" — thousands of them — at the coming exposition in Portland, Oregon. No inducement in that — not half big enough as we estimate that land of wonders. Make them big as cartwheels, gentlemen, and we'll try to run over and see them.

The much-discussed sinuous flower beds in Copley Square, Boston, are to be obliterated, and the whole area turned into an unbroken lawn this spring. We shall like it better. But, just as an experiment, we would like to see in the center one of those noble sub-tropical beds of musas, cannas, and pennisetum such as adorn the botanical garden at Washington, D. C., each year.

The delight afforded by a humble flower in a window is beautifully expressed by H. C. Bunner:

A pitcher of Mignonette
In a tenement's highest casement;
Queer sort of a flower-pot — yet
That pitcher of Mignonette
Is a garden in heaven set
To the little sick child in the basement —
The pitcher of Mignonette
In the tenement's highest casement.

WHOLESOME CHESTNUTS

Don't be in a hurry uncovering hydrangeas; they will not stand frost and we may have a little of that yet.

If you intend putting in cutings of dahlias, do it without delay.

Harden your cauliflowers before you think of putting them in the open ground.

If you haven't started your tuberous begonias, do so now so that you will not have to rush them.

To prevent curled leaf on peaches, spray with Bordeaux mixture; do it now and after the fruit has set.

Don't move young evergreens for a month yet, but with everything in the deciduous line go ahead.

If you want to divide clumps of herbaceous plants, go at it right away before growth begins, and if you are intending to buy new stock, order now; you will likely get better stock than later after others have had their pick.

The only place for sweet peas now is in the ground. If you put them to bed there early they will greet you later on with smiling faces and in great abundance.

Get your geraniums out into the frames; they will like it better and you will like their appearance better after they are there a little while.

ALL UP FOR NEXT YEAR'S ROSE SHOW

Now that the rose show, which was a grand success, is over, I think it would be a good thing for everyone to start their plans for the next year's show, and try and make it, if possible, a better one — that is, with more entries, especially in the hybrid class. I wish to call the attention of all the young men I have known who worked at the Waban Rose Conservatory since 1887, and those previous to that date, to start now and plan for a good contest in all the classes that will be offered. Go in with the idea of winning, and if beaten by better product take your medicine manfully and give credit to those winning.

In the exhibition just passed, many of the prize winners were men who had worked under Mr. Montgomery — such men as George Harveston, Robert Cameron, William Riggs, William H. Elliott, George Melvin, not forgetting Welch Bros., who so generously gave a good prize. I don't wish to be understood that this is to be a clique, but I think that every man who is in a position to do so, should try to grow something worthy, and thus honor their former employer. There are many such men scattered over this country. When Peary discovers the pole, he may find a Waban man running a place, "heated by some underground hot water system," catering to the natives of that northern climate!

There are vast possibilities which may be brought into action, and resources we havn't yet called upon, which will go far to make a more interesting exhibiton than the one just passed. Now boys, of the Waban University (as P. Welch calls it) get busy; put on your "thinking caps," lay out your work carefully; follow up the minor details all through the year; get other florists and gardeners interested; join the Rose Society, and try to make the next show such that the other sections of the country will have to work hard to even keep up to its standard of excellence. It will please Mr. Montgomery more than winning prizes himself; he will appreciate the honor, and say in his own modest way, "Well done boys, I'm proud of you." Robert T. McGorum.

NEWS NOTES

The stock of Sigmund Geller, bankrupt, dealer in florists' supplies, was sold at auction last week at the store in West 28th Street, New York.

James Gergan, employed in Greenwood Cemetery, Brooklyn, N. Y., fell and sustained a fracture of the leg, April 3. He was taken to Seney Hospital.

The splendid estate of Col. Chas. Pfaff, at Framingham, Mass., has been sold to Richard H. Long. It contains three hundred and twenty-five acres of grounds, fine buildings, and range of greenhouses.

Recent visitors in New York; W. W. Edgar and Mrs. Edgar, Waverley, Mass.; Peter Crowe, Mrs. Crowe, and Mrs. Crowe, Jr., and daughters; J. C. Spencer, Utica, N. Y.; Phil. Breitmeyer, Detroit; W. H. Elliott, Brighton, Mass.

OBITUARY

Charles O. Saunders, a well-known florist of Everett, Mass., died on April 6, aged fifty-nine years. He conducted the Belmont Hill Nursery and had served as park commissioner and chairman of the Board of Health.

E. H. Howland, of Holyoke, Mass., died on the morning of April 11, aged 54 years. He was born in India, his parents being missionaries. He was a member of the '74 class at Amherst.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Anderson & Williams of Waltham are bringing in some fine plants of American Beauty roses in seven and eight-inch pots. These plants have flowered in beds for two years, and after being cut back and well ripened were potted into sevens or eights and started in gentle heat in December. They have from ten to twenty-five flowers to a plant, and sell readily. Mr. Anderson tells me that he has a lot of Crimson Ramblers which were started in December that he expects to dispose of at Easter.

Robert Montgomery, of Natick, has offered the Flower Market base-ball teams the use of a large field for their games this summer. I am pleased to see that the idea of more sociability among the florists is meeting with marked approval in many quarters. It is not too early to begin to plan some general outing for the coming summer. Let me have your suggestions, and we will try to get together and decide upon some scheme to insure a social day or two.

Thos. F. Matthews.

EASTER PLANTS FOR BOSTON

The annual Easter pilgrimage to W. W. Edgar's plant houses was made on Wednesday, April 12. As near to perfection as cultural knowledge and a year's assiduous attention can make them, those thousands of gorgeous azaleas, rambler roses, acacias, genistas, lilacs, and astilbes are a sight to arouse the highest enthusiasm in the plant lover, and an object lesson better than books for him who would aspire to attain eminence in the art of plant culture. The lily houses, too, are a sight worth going far to see and are an impressive example of what is possible with properly ripened Japan bulbs, properly handled.

There are lots of growers, some big ones included, who would open their eyes wide, and go home with expanded ideas of the possibilities in Easter plant growing after a visit to this notable display. Mr. Edgar has nothing in particular in the way of novelties this season — unless indeed we class as such a bench of lusty candidum lilies, a rarity calculated to awaken lively recollections in any old-timer. Double white lilac, Mme. Lemoine, is there in abundance, flowers beautiful, but not profuse enough, and Mr. Edgar places Marie Legrange at the top of the list for forcing purposes.

Long ranks of closely packed tomato plants, three or four feet high, in big pots, stand ready to take possession of the benches as soon as the Easter beauties have gone out into the cold, cold world to feel for the first time in their lives the pangs of exposure and neglect. Dormant astilbes also await the vacated room, and in the unusually short interim this year will have to go through some strenuous experiences in order to be in acceptable shape for the next big floral festival — Memorial Day.

The frontispiece of last weeks issue of Horticulture, Lilium philippense, excited much favorable comment in Newport, and the many friends of the introducers, are anxiously awaiting the arrival of the time when this lily will be disseminated. That the Farquhars stand sponsors for this new introduction is a sufficient guarantee of its merit.

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The annual meeting of the Executive Board was held at the New Willard Hotel, Washington, D. C., on Tuesday, Wednesday and Thursday, April 4–5–6, 1905. In the absence of President J. C. Vaughan, Vice-president J. R. Freeman occupied the chair. There were present also Ex-president Phil. Breitmeyer; Treasurer H. B. Beatty; Secretary Wm. J. Stewart; Directors H. M. Altick, Theo. Wirth, W. H. Elliott, and E. V. Hallock; Ex-presidents Wm. R. Smith, and W. F. Gude; Professor Galloway of the U. S. Department of Agriculture, and Secretary Moseley of the Interstate Commerce Committee.

The report of the secretary indicated a continuous prosperous condition in all departments, and the treasurer's report showed the largest cash balance on hand in the Society's history. Various committee reports were presented and approved. Professor Galloway addressed the Board on behalf of the Department of Agriculture, offering the coöperation of the Department in the arrangement for the entertainment and instruction of the Society at the convention next August.

The program for the convention, so far as completed, provides for the customary opening exercises on the afternoon of Tuesday, August 15, and president's reception in the evening. Nomination and election of officers and other routine work of the Society will share the morning sessions of Wednesday and Thursday, with several papers on subjects of interest, and the evenings of these two days will be devoted to stereoptican lectures under the auspices of the Department of Agriculture. Among the papers presented will be one by Oglesby Paul, of Philadelphia, on "Landscape Gardening" or a kindred subject, one on "Helps to Floriculture in the South and Southwest" (not yet assigned) and on "American Bulb Growing" by Prof. A. J. Pieters. In addition a competiton is to be arranged for, and prizes will be offered by Treasurer Beatty for the best essays on the subject of "The Ideal Employer."

The consensus of opinion in the Board favored a policy of broader publicity in the Society's work, closer affiliation with the daily newspapers, and for fuller press reports than heretofore, and the dissemination of general horticultural information in every community of the country, particularly through the medium of the public schools. A bronze medal was appropriated to be placed at the disposal of Miss S. B. Sipe, for award to the school children of the city of Washington for the encouragement of horticulture.

Favorable action was taken towards the appointment of a committee to report on the feasibility of preparing a concise and practical text book for use by Boards of Education, to be disseminated through the various Florists' Clubs.

The National Rifles Armory on G street, N. W., between 9th and 10th streets, was selected for the exhibition, the upper and lower halls to be used for this purpose, and the proffer of Carroll Hall, adjoining, was accepted for the use of the Society for its meetings. Should the exhibition overflow the accommodations in the Armory, an additional hall is available in Masonic Building.

A fine special exhibit will be made by the Department of Agriculture, and a silver medal will be offered for the best display of cut flowers in vases. It was voted that the exhibition be allowed to remain open during the sessions of the Society, as an experiment. George H. Cooke, recommended by the Washington Florists' Club, was duly appointed superintendent of the exhibition.

Wednesday afternoon was set apart for the bowling tournament, and Messrs. Phil. Hauswirth and John Westcott were appointed to act with the local sporting committee. The bowling alleys selected are located on 8th and E streets.

The following final resulotions were unanimously adopted:

"We, the members of the Executive Committee of the Society of American Florists' and Ornamental Horticulturists, in meeting assembled, regret the circumstances that have made necessary the absence of our President, J. C. Vaughan, and that we could not avail ourselves of his experience and wisdom in the deliberations of this Committee.

We wish to state, however, that his place was most ably and satisfactorily filled by our Vice-president, J. R. Freeman, and we hereby wish to express to him our appreciation of his many kindnesses while in and out of the Chair.

We wish to extend our heartfelt thanks to each and every member of the Washington Florists' Club, and especially to the accomplished President, W. F. Gude, for their untiring kindness and courtesies, and particularly for the delightful entertainment with its most beautiful decorations.

And further to the management of the New Willard Hotel for the courtesies, and to the daily press for their full and accurate reports of our meetings.

Finally, the Committee is greatly impressed with the great work the Hon. James Wilson, Secretary of Agricutlure, is doing along the lines of horticulture, and the willingness of this department to coöperate with this Society in every possible manner; and for the individual interest shown by Prof. B. T. Galloway during our stay."

WM. J. STEWART, *Secretary.*

BANQUET AT WASHINGTON

On Wednesday evening, April 5, the Executive Board of the S. A. F. was given a banquet by the Washington Florists' Club, at the New Willard Hotel. Many of the bright lights of Washington horticulture were present, and the speeches made by the visitors and the local representatives were replete with good things. Every one participated, the affair lasting until midnight. The floral decorations of the table, the work of J. H. Small & Sons, were exquisite.

BOTANICAL SOCIETY OF PENNSYLVANIA

The first field day of the season for the above society took place Saturday afternoon, April 8th. Ogelsby Paul acted as cicerone and piloted the party to the Widener estate at Ogontz. William Kleinhans, the superintendent, gave a hearty welcome and a pleasant afternoon was spent inspecting the grounds and conservatories. This is one of the largest and most imposing country seats in the vicinity of Philadelphia and a good example of what Lord Bacon meant when he spoke of building stately and gardening finely. The landscape gardener whose duty it is to realize for

> " . . . wealth and pride
> How to obtain their wish —
> The world's applause"

made a good job of this estate and all lovers of the tasteful and picturesque are under obligations to him.

NEW YORK FLORISTS' CLUB

The meeting on Monday evening, April 10, was a very successful one from every standpoint, — forty-five present. President Traendly was in his happiest vein, and the exhibition of Easter plants was very creditable. Chairman Nugent was kept busy carrying turkey and opening "White Rock."

The Question Box has turned out to be the most interesting feature now of the meetings. It was one of the longest sessions in the history of the Club, and one of the questions: "What is the most valuable plant introduced in the memory of any member of the Club?" went over to the May meeting.

The following is the list of exhibits and awards: —

AWARDS

Hinode Florist Co. — Crimson Rambler, award of excellence for culture. Thos. DeVoy & Son. — Telegraph Geranium, award of merit for culture. Louis Dupuy. — Collection of ericas, Acacia Mimosa cordata, dwarf Crimson Ramblers, marguerites, standard double lilac, blue hydrangea, award of excellence for culture; balance of exhibit, award of merit for culture; Crassula hybrida coccinea, certificate of merit. Pankok & Schumacker. — Bougainvillea Sanderi, award of excellence for culture; Epiphyllum, award of merit for culture.

All these plants exhibited were grand in every way. This was especially so of the ramblers of the Hinode Florist Co. and the bougainvillea of Pankok & Schumacker, and the new and other plants of Louis Dupuy were excellent. Louis Dupuy gave an interesting talk on his plants, which was very much appreciated.

C. W. Ward was unable to be present, but sent a letter in reply to the question of why the carnation growers were more progressive than the rose growers. This brought up a heated discussion, the rose growers being championed by Messrs. Harry O. May, Butterfield, and others, and the general discussion being taken up by Messrs. Reimels, James T. Scott, O'Mara, Butterfield, Wallace, Wheeler, May, and Lenker.

The question: "Is Floriculture more advanced in Europe than in the United States?" brought out a splendid paper from James T. Scott, and both Mr. Ward and Mr. Scott received the thanks of the Club.

President Traendly brought up the matter of the exclusion of children between 12 and 16 from the greenhouses in Prospect Park, and Messrs. John Reimels, S. S. Butterfield, and A. H. Langjahr was appointed a committee to protest to the park commissioner of the borough of Brooklyn.

The following questions were taken from the Question Box to be answered at the May meeting: —

"What is the essential qualification of a judge of plants and cut flowers?" — Alex. Wallace.

"Are street merchants and peddlers beneficial or detrimental to the florist business, from growers', wholesalers', and retailers' standpoint?" — L. W. Wheeler.

The Board of Trustees offered an amendment to the By-Laws raising the secretary's salary to $250 per year, he to collect all moneys from members and turn over to the treasurer. Same will be acted upon at May meeting.

At the May meeting there will be an exhibit of spring stock and bedding plants, and the same will be under the personal direction of John Birnie.

The following rules governing the exhibition of novelties, etc., submitted by the Committee of Award, went into effect at this meeting.

RULE 1. The Committee requires that the initial exhibit of new varieties of flowers or plants be made at a regular meeting of this Club, and the exhibitor

shall notify the Secretary at least ten days prior to the meeting at which he proposes to exhibit.

RULE 2. Anyone showing a novelty with the intention of obtaining the Club's endorsement in any way the committee may recommend shall conform to the rules laid down by them for their guidance as herein stated.

RULE 3. Any exhibit of a novelty in cut flowers at a regular meeting, if considered of sufficient merit by the committee, they, or at least three of them, shall be empowered to visit the place where it is growing, and if, after careful examination of the same, they deem it of sufficient merit, they shall award accordingly; but if, in their judgment, it appears advisable to defer the same till as second visit shall be made, they shall be at liberty to so decide.

RULE 4. The highest award for flowers or plants shall be the Silver Medal of the Club, the next the Certificate of the Club, the next "Highly Commended," the next "Honorable Mention."

RULE 5. In judging Carnation flowers at the exhibition in the Club's meeting room, the scale of points adopted by the American Carnation Society shall be adopted, as follows:

Color, 25	Calyx, 5	Form, 15
Size, 20	Stem, 20	Fragrance, 5
	Substance, 10	

Should the variety judged score 85 points or more a preliminary certificate shall be granted to it. In judging the variety where it is growing, the following scale shall be used:

Condition, 15	Size, 15	Substance, 5
Productiveness, 15	Calyx, 5	Form, 10
Color, 15	Stem, 15	Fragrance, 5

Should the variety score 85 points or more, the final award shall then be made. If it fail to score 85 points or more, the preliminary certificate shall be withdrawn and public notice given of said withdrawal.

RULE 6. In judging Rose flowers at the exhibition in the Club's meeting room, the scale of points adopted by the American Rose Society shall be used, as follows:

Size, 10	Form, 15	Fragrance, 5
Color, 20	Substance, 10	Distinctiveness, 10
Stem, 15	Foliage, 15	

In judging the variety where it is growing, the following scale shall be used:

Condition, 15	Color, 15	Substance, 10
Productiveness, 15	Stem, 10	Fragrance, 5
Size, 10	Form, 10	Distinctiveness, 10

The stipulations for award on Carnations shall apply also to Roses.

RULE 7. In judging Chrysanthemums at the exhibition in the Club's meeting room, the scale of points adopted by the Chrysanthemum Society shall be used as follows:

COMMERCIAL SCALE	EXHIBITION SCALE
Color, 20	Color, 10
Form, 15	Stem, 10
Fullness, 10	Foliage, 10
Stem, 15	Fullness, 15
Foliage, 15	Form, 15
Substance, 15	Depth, 15
Size, 10	Size, 25

The final award shall be made on Chrysanthemums at the initial exhibition in the Club's meeting room.

RULE 8. When a *new plant*, such as will be grown in pots or in the open ground generally is brought to this Club's meeting, if the committee is sufficiently satisfied as to its distinctive merits and other qualities, they shall be empowered to give final award without further examination.

RULE 9. In judging plants or flowers other than the foregoing, the committee may use a scale of points adopted by a special society covering the exhibit, if any exists; or they may judge them by any other method at their discretion.

RULE 10. All reports of the committee shall be entered in a book kept for said reports; all reports shall be signed by the members making same.

RULE 11. The committee recommends that the expenses necessarily attending the traveling, etc., to examine novelties where they are grown shall be paid by the exhibitor. We further recommend that after the initial exhibit be made in the Club's rooms and the committee requires further investigation, that the party exhibiting such novelty shall be notified by the secretary that if he wishes the committee to go to the place for further examination he must forward the amount in cash to the Secretary of this Club necessary to cover mileage, etc. The chairman of this committee shall first ascertain what such expenses would be and advise the secretary of the amount, and in no case where the money is not sent in advance shall the committee be authorized to make the visit.

RULES COVERING EXHIBITS OF DISSEMINATED VARIETIES

RULE 1. Competitive exhibits of flowers or plants already disseminated shall be judged by the scales governing same as provided in the rules of novelties, excepting Roses. In case of the latter, the following scale shall be used:

Size, 15	Stem, 20	Substance, 15
Color, 20	Form, 15	Foliage, 15

RULE 2. The awards under the rules for disseminated varieties shall be: First, "Award of Excellence for Culture;" Second "Award of Merit for Culture."

RULE 3. All exhibits at Club meetings not embraced in the foregoing shall be judged by a special committee appointed by the presiding officer with the approval of the Club.

RULE 4. Should less than three members of the committee of award appear at a meeting when exhibits are to be judged, the presiding officer shall, with the approval of the Club, appoint others to act temporarily; the power thus granted to expire at the close of the meeting.

SPECIAL

When the committe visits the place where plants or flowers are grown, for the purpose of making final inspection, at least three of the committee must be present before final award is made.

That all notices to visit places where plants or flowers are to be judged shall be sent out by the chairman of the committee of awards.

"WHY ARE CARNATION GROWERS MORE PROGRESSIVE THAN ROSE GROWERS?"

C. W. Ward, at meeting of New York Florists' Club.

I believe that as a class the carnation growers are more liberal, more energetic, and determined to push their flower to the front than are the rose growers. Again, the rose grower has had the advantage of having a certain amount of self conceit owing to the fact that the popularity of the rose has been of long standing, while the carnation grower knew that in order to get a standing he had to get out and hustle and make things ring. Again, the rose grower is working under an average temperature ten degrees higher than is the carnation grower. Now you know that inhabitants of tropical climates are much less energetic than those of temperate climates. The temperature of the carnation house approximates a temperate climate, while the temperature of the rose house approximates a tropical climate, consequently, I consider the rose grower a tropical inhabitant, and the carnation grower a temperate one.

Again, the carnation grower has the advantage of having a better following than has the rose grower, when you consider it from one point of view, and that is that it is more plastic under the hybridizers management, and it is much easier to produce new varietes of carnations than it is to produce new varieties of roses.

Again, the facility with which the general public has accepted the improvement in the carnation, and the promptness with which it has awarded the efforts of the carnation hybridizer has acted as a strong stimulus to the carnation men throughout the country, and infused into them a degree of energy and progressive spirit that has carried them on enthusiastically in their work, and produced the splendid results in increasing business, which has benefited the entire florist trade, grower, commission men and retail dealer alike.

Further than this the deponent saith not.

NASSAU COUNTY, N.Y., HORTICULTURAL SOCIETY

The monthly meeting of this society was held at the Glen Cove greenhouses on the afternoon of April 5th. The attendance was not particularly large, but exhibits were plentiful, nearly every member contributing something. The relating of experiences in the production of the various exhibits brought out many interesting and valuable cultural hints which should bear fruit eventually. A charming vase of that grand red carnation, Robert Craig, kindly furnished by the Cottage Gardens, Queens, N. Y., graced the exhibition table. Special mention was made of a new seedling white carnation raised by Mr. Felix Mense, Glen Cove greenhouses. Mr. Mense has named it Dosoris and, judging from his stock, it is a profuse bloomer and of robust constitution. The flowers are full, well built, and apparently non-bursting. Another seedling carnation, dark pink, was exhibited by Mr. Myers, superintendent for G. R. Sheldon. The flowers were large, full, with highly fringed petals. A beautiful specimen of white cineraria stellata, grown by A. McKenzie, superintendent to Percy Chubb, attracted great attention. The plant measured four feet in diameter and carried an enormous wealth of blossoms. The same gentleman exhibited an interesting dish of Gradus peas, grown under glass. The seed had been sown around December 20th and pods were ready for pulling during the first week in March. It may be mentioned that these peas proved very appetizing to the members present — an inducement to attend, I should say. A standard gardenia, profusely flower-budded and showing the marks of high culture, was exhibited by T. Harrison, superintendent to E. R. Ladew.

It was decided, until further notice, to hold the meetings in the evening.

John F. Johnston.

NEWPORT HORTICULTURAL SOCIETY

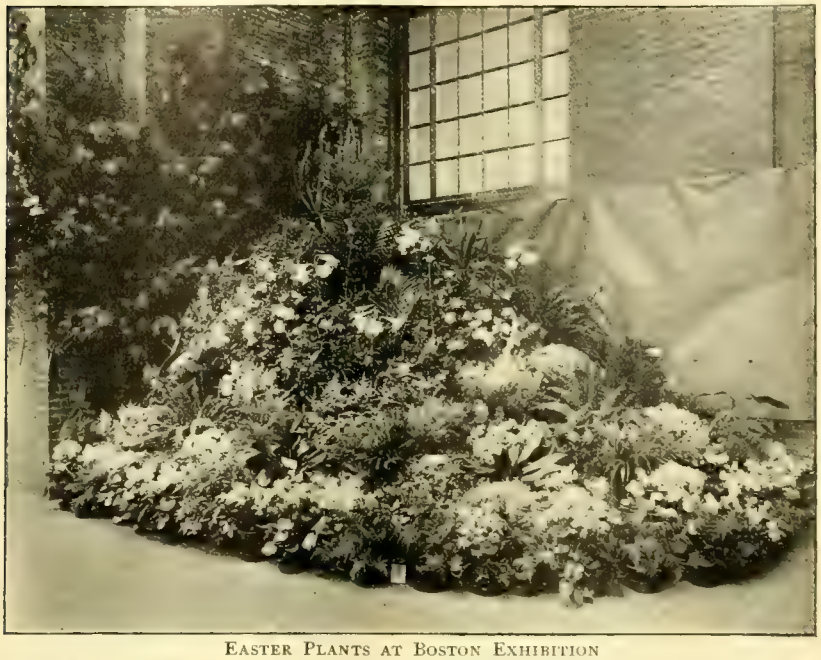
A largely attended meeting of the Newport Horticultural Society was held last Wednesday evening, President Sullivan in the chair. The finishing touches were given to the premium schedules. Committees were appointed to make all the arrangements for the exhibitions.

Eight new members were admitted and it is hoped that by the end of the year the roll of members will be larger than it has ever been. Ten new classes were added to the schedule for the rose show to be held in June. These classes are chiefly for specimen plants. One class reads for the best fern; this ought to bring out something worth seeing besides perhaps bringing the several new varieties of nephrolepis grown here into competition.

NEW JERSEY FLORICULTURAL SOCIETY

At the April monthly meeting of the New Jersey Floricultural Society there was the usual display of fine roses, carnations, and orchids from the houses of John Crosby Brown (Peter Duff), Sidney and Austin Colgate (William Read), A. C. Von Gaasbeck (William Bennett), Henry Graves (Edwin Thomas), William Barr (Arthur Bodwell), Charles Hathaway (M. Hornacker). Of chief attraction, however, were the amaryllis Empress of India, grown by Peter Duff, amaryllis Lady of Barouald, a unique pink and white flower, brought by Mr. Barr from Florida in 1888, grown by Arthur W. Bodwell, and the new rose Wellesley, grown by John N. May. A seedling carnation of M. Hornacker's was exhibited for the first time and certificated. The paper of the evening was "Herbaceous Perennials for the Open Border," by William Read, a copy of which was requested for publication in the transactions of the Society and in addition to the usual vote of thanks was given to the essay committee with power to publish.

Joseph B. Davis.



NEW HAVEN COUNTY HORTICULTURE SOCIETY

This society met on April 4, and listened to a very interesting paper on lilies and other bulbs, by Mr. Koehler. A very attractive exhibit of bulbous flowering plants was made.

NOTES

The New London Horticultural Society held its regular meeting at Norwich, Conn., on the evening of April 4, with over one hundred and fifty members and friends in attendance. President Thos. W. Head gave an interesting address on the subject of roses.

At the regular monthly meeting of the

Easter Plants at Boston Exhibition

American Institute, New York City, on Wednesday, April 12, Dr. N. L. Britton, director of the New York Botanical Garden, delivered an interesting lecture, illustrated by lantern slides, his topic being "An Evening with Cacti."

The monthly meeting of the Kentucky Society of Florists', Tuesday night, April 4, was well attended, and proved to be very enthusiastic in many respects. A sweet pea show will be held in June, and a committee has been appointed to look after a building, etc. The large November show will be held November 14 to 18. Messrs. H. Kleinstarink, R. J. Rasmussen, and Adolph J. Koenig, were elected members.

EASTER PLANT QUOTATIONS

Easter flowering plants in different sizes are quoted by growers as follows:

CINCINNATI. — Hydrangeas 6 to 7-in., $1.50 to $2.50; 8 to 10-in., $3.00 to $5.00; lilacs 6 in., $1.00; daisies 6 to 7-in., $1.00; astilbes 6-in., 35 c. to 50 c.; crimson ramblers 6 to 7-in., $1.00 to $2.00; pot roses, hybrids, 6-in., $1.00 to $1.50; tulips, pans, 6 to 7-in., 50 c. to 75 c.; hyacinths, pans, 6-in., 75 c.; daffodils, pans, 6-in., 75 c.; 8 to 10-in., $1.00 to $1.50; lilies 6-in., 75c. to $1.50.

CLEVELAND. — Azaleas $1.00 to $1.75; hydrangeas 4 to 6-in., 25 c. to 35 c.; 6 to 8-in., 50 to 75 c.; lilacs $1.50 to $2.50; rhododendrons 8 to 10-in., $1.50 to $2.50; large specimens $2.50 to $3.50; daisies $1.50 to $3.00; genistas 4 to 5-in., 25 to 50 c.; large, bushy plants 75 c. to $1.50; crimson ramblers, medium 75 c. to $1.50; large and full $2.00 to $3.00; tulips, pans, 3 to 6-in. pan, 3 c. bulb; lily of the valley, 12-in. pan, 35 c. to 50 c.; hyacinths, pans, 12½ c. per bulb; daffodils, 3 to 12-in. pan, 3 c. per bulb; lilies 12½ to 15 c. per flower.

ST. LOUIS. — Azaleas $1.25 to $1.50; hydrangeas 35 c. to $3.00; rhododendrons $1.50 to $2.00; daisies 35 c. to $1.00; genistas 50 c.; acacias $1.50; astilbes 25 c. to 35 c; crimson ramblers $1.50 to $3.00; pot roses 25 c. to 50 c.; lily of valley, pans, $1.50; lilies, 15 c. per flower.

Agents for Horticulture are wanted in every community. Liberal commissions to active workers. Write for information.

CHICAGO EASTER PROSPECTS

Easter lilies will be equal to any demand, however there will be a shortage of long-stem stock. There is some anxiety about the violet crop; the weather will play an important part on the supply of this item. Eastern violets will be the mainstay. An abundance of bulbous stock is in the program, tulips of course taking the lead. The American Beauty is on in full crop, the long-stem grades particularly plentiful. Brides and Bridesmaids hereabouts are of finest quality; the cut will be at its height for Easter. Carnations are somewhat uncertain for large quantities in high grades.

A last reminder to florists wishing to transfer retail orders for Chicago delivery. H. E. Klunder, 33 State street is a graduate from 5th avenue, New York. This up-to-date store is the Chicago house for many leading relailers of New York, Boston, and Philadelphia.

Central Floral Co., 105 Wabash avenue, are leaders for out-of-town deliveries and their exchange list includes the best retailers from all sections of the country. Weilland & Risch's rose crop will just be right for Easter and is up to the usual high standard of this progressive firm.

Wietor Bros., 51 Wabash avenue, have a number of special Easter novelties and excellent stock of roses, carnations, and lilies.

Roses, carnations, lilies, and bulbous stock, offered by Sinner Bros. are so well grown as to deserve comment. This firm enjoys the largest shipping trade amongst the growers on the flower growers' market.

A. L. Randall Co.'s head-liners are white and purple lilac, fancy Murillo tulips, New York violets, and selected Harrisii lilies.

Besides a large Easter crop from numerous consignors, J. A. Budlong's own extensive range will furnish excellent Beauty, Bride and Bridesmaid roses, carnations of finest quality and extra long-stemmed Harrisii lilies.

At Peter Reinberg's million square feet, the entire crop is in for Easter. Their finish on Madam Abel Chatenay, the queen of Easter roses, and Uncle John, the improved Golden Gate, is beyond equal.

The Chicago Carnation Co. at their city salesroom, will have Lady Bountiful, White Lawson, Dorothy Whitney, and the great Cardinal carnations.

NOVELTIES

Besides orchids C. W. McKellar, the western orchid king, will supply white violets and gardenias.

English wallflower, outdoor lilac, and trailing arbutus are the novelties at E. H. Hunt's.

Stollery Bros.' novelty tulip, "Stollery's Special," is a fine double pink, somewhat darker than Salvator Rose. This grand variety which is grown with 20 to 24 inch stems for Easter, is pronounced by experts the finest they had ever seen.

The case of James Donovan, of Newport, against Mrs. Jacobs for damages for injuries sustained by him in falling from a tree, is to be tried in the United States Court, as Mrs. Jacobs is not a citizen of Rhode Island.

Easter Plants at Boston Exhibition

STREET AND WAYSIDE PLANTING

Read before the North Shore Horticultural Society by J. A. Pettigrew, March 17, 1905

[Continued from last week's issue]

What to plant for street trees, and how to plant them, are important questions, on the answers to which depend much of the success in planting for street embellishment,

Of suitable trees we have an abundance from which to choose. I will enumerate a few that I consider most fitted for the purpose:

First and foremost comes the American elm — a grand tree of vigorous growth. It must have room to develop, and a rich soil, fairly moist. A good tree for wide city streets, and without an equal for wayside planting.

The European elm (Ulmus campestris) is a noble tree. It has not the graceful, pendulous habit of the American elm, yet it possesses in its columnar trunk, a stately grandeur hardly equalled by any other tree. It thrives well under adverse conditions. As a sidewalk tree it has many valuable qualities, conspicuous among which is the persistency of its rich, green leaves, lasting, as they do, until late in the autumn. In some seasons its summer growth does not become sufficiently ripened to stand the winters in this latitude; yet this trouble is not so serious as to prevent its use for any situation where shade trees can be grown. It loves good soil.

The horse chestnut (Æsculus hippocastanum) is a tree from Europe. It grows very freely and gives dense shade, and is a popular favorite on account of the beauty of its flowers in the early summer. Its foliage ripens and falls early in the autumn. It is a suitable tree for city streets.

The soft maple (Acer dasycarpum) is a fine tree for wide streets or waysides, where good soil is abundant. It requires space and sunlight to get the best results. It is reputed to be easily injured by storms on account of weakness of fibre; this occurs only when it is grown under crowded conditions.

The American ash (Fraxinus Americana) is an adaptable tree. It grows fairly well as a sidewalk tree, but it is not so desirable as many others, on account of the late leaving-out and early ripening of its foliage. On poor soil, and in dry localities, it is apt to be attacked by borers and the scale insect. In rich soil, its growth is rapid, producing a picturesque tree.

The buttonwood, or sycamore (Platanus occidentalis), is a lofty, quick-growing tree, but not to be recommended for planting in this district, on account of its liability to be infested with fungi, which blacken the leaves. Its near relation, the oriental sycamore, resembles it greatly in appearance, although a little more compact. This species is much valued south of this latitude.

The maidenhair-tree (Ginkgo biloba) is from Japan. This tree has not been used as a street tree, to my knowledge, except in Washington, where two streets are planted with it, and where it has proved most satisfactory. In good soil it grows rapidly, and it seems to have no insect enemies. It forms a handsome avenue, as can be seen on the Agricultural Building grounds in Washington, or on Pierce street, where the planting before-mentioned has been done. Boston and vicinity probably is the northern limit of its hardiness, or, rather, I should say, of its free growth. Fine trees of this species can be seen in the Public Garden, and at Mt. Auburn Cemetery.

The hard or sugar maple (Acer saccharinum) does not make a good city tree. It is impatient of rough treatment; paved sidewalks and paved streets are fatal to it. It is, however, a good tree for suburban conditions, or for a country wayside tree. It is one of the handsomest of our North American trees. This tree will adapt itself to a thin soil.

The Norway maple (Acer platanoides) is an introduction from Central Europe. It forms a rather wide-spreading, handsome top, with a wealth of large leaves, forming a dense shade. It thrives fairly well as a city sidewalk tree; but, on account of its width of spread, it is only suitable for wide streets. As a wayside tree it hardly can be surpassed.

The sycamore maple (Acer psuedo platanus), also from Europe, is a wide-spreading tree, with large, somewhat leathery leaves. It is a noble tree in its native habitat, but does not take kindly to the United States. It is subject to borers and is not to be recommended.

The American beech (Fagus ferruginea) is one of the most ornamental of American trees, but, on account of its low-branching habit in the open, and its surface rooting propensity, it is not adapted for city planting. This tree loves too well the soft, leafy mulch of its native woods to bear transplanting to the heated sidewalks.

The silver poplar (Populus alba), introduced from Europe, is one of the best trees for hard conditions. In smoky, dusty, and thickly populated localities, or in poor soil, it will exist and make a brave show. By many it is esteemed an ugly tree. The poplar trees planted (I have been informed by Strauch, the originator of the lawn treatment of cemeteries) in Cincinnati, however, would convince anyone to the contrary. Or, without going further east than Boston, one could have found in Maverick square, two fine specimens until two years ago, when they were removed to make way for the new tunnel entrance. This tree has a disagreeable habit of suckering.

The American linden (Tilia Americana) also is a tree that will accommodate itself fairly well to street life, provided it is given good soil, and is protected from the tussock moth, to whom it seems to be a favorite food plant. As a wayside tree, it is well adapted, being of quick growth and of handsome proportions.

The European linden (Tilia vulgaris), as its name indicates, is from Europe, and has a well-deserved reputation as a fine shade tree. Planted in good soil, it will grow under very crowded conditions of street life. At South Boston it can be found growing in brick-paved sidewalks, and persistently putting forth leaves each spring, which are as persistently eaten off by the tussock moth caterpillar. It forms a tree of stately growth, holding its leaves well into the fall; while, in early summer, with its near relative, the American linden, its flowers charge the air with a delicious perfume.

The tree of Heaven (Ailantus grandulosa). This is a tree of the tenements. No city conditions, be they ever so hard, seem to discourage its growth altogether. It can be found on Beacon Hill, in narrow courtyards, throwing up its handsome foliage to the housetops; and in many parts of Boston it can be found in corners by the stoop, thriving equally well. Apparently it has not been used as a street tree in Boston, probably from the reputation which male flowers have of emitting a disagreeable odor. I have lived on Long Island, where the Ailantus is naturalized, and where some of the finest street trees are of this kind, and I have never been able to detect any odor, unless I placed the flowers to my nostrils. In rich soils there might be kill-back in winter, from under-ripened wood; but, in poor soils, I feel sure, this trouble would not occur. I am confident that no mistake would be made in planting this tree where hard conditions exist.

The white willow (Salix alba), introduced from Europe, was, undoubtedly, a favorite with the early settlers, as fine trees are to be found throughout the coast of New England. The variety cœrulea is the one most suited, I think, for street planting. It is not particular as to soil, and, if a little care is given to the training-up of a leader, it forms a handsome tree. The willow does not lend itself to neat and precise or formal work. Its value as a street tree lies in its adaptability to adverse conditions, its early budding forth in spring, and in its holding its bright-shining green leaves until late in the fall.

The tulip tree (Liriodendron tulipifera) is another good tree for suburban and wayside planting. It is impatient of restraint or hard usage; but, under proper conditions, it is one of the finest trees of the forest.

The red oak (Quercus rubra) and the scarlet oak (Quercus coccinea) are both grand shade trees for the streets in suburban districts, or for the wayside. The prevalent notion has been that these trees are of slow growth, which accounts for their not having been used for street planting. This idea is erroneous, especially as regards the red oak, which, I think, will outstrip a hard maple in growth. On the Boston parkways, the red oak has been extensively planted for shade. The growth, since the trees became established, has averaged two feet, each season, and in some of them a growth of from four to six feet has been made in one season. The oak will not thrive under paved street and sidewalk conditions, but no better trees can be planted for roadsides, or even for suburban streets, than the red and scarlet oaks.

The pin oak (Quercus palustris). This oak is a very graceful tree in its young state. Its lower branches drop with a curved sweep to the ground, consequently it should be planted only in such positions as will allow the lower branches to be retained. As a street tree, in ordinary locations, this cannot be done and the most beautiful feature of the tree is thus lost. Without its lower branches, this oak is much inferior in appearance to the red or scarlet oak. It loves moisture, however, and may be utilized on low grounds.

The planting of street trees requires as much care as does their selection. It is not enough to merely dig a hole and crowd the roots into it. Any expectations based on such planting are doomed to end in disappointment. In laying out for street planting, let the first stakes be set at the street crossings. When the abutting streets also are to be planted, place two stakes at each corner, about thirty feet from the point of intersection of the curb line, on each street. Then space off the intervening distance, setting the stakes equally dis-

tant apart, but not less than sixty-five feet, as the shortest distance.

Street trees, generally, are planted too closely together. Sometimes this is done with the intention of cutting out alternate ones, as the growth of the trees require. This, however, is seldom done, and the trees grow up too thickly, thereby overcrowding and injuring each other, destroying also the individual beauty of the trees and the symmetrical arrangement which an avenue of trees should have.

For sanitary and hygienic reasons, streets ought not to be too much shaded. The sun should be permitted to shine on the walks, and on the walls of the houses, in turn, as the earth moves in its course. Glimpses of light and shadow, too, have an æsthetic value, which is worth considering.

Sixty-five feet apart is the minimum distance, I think, at which street trees should be planted. For large-growing trees, as the elm or soft maple, seventy-five feet or one hundred feet apart would be none too much space to allow. Wayside or highway trees need not be set with the same precision as street trees. An irregular planting, conforming, in general, to the surrounding scenery, would be in better harmony. In places, an accentuation of existing groups of trees may be all that is necessary, or, simply, a thinning out of overcrowding trees, or of poor trees which are damaging more valuable ones; for let it be an axiom with the tree planter, who is planting for ornamental effect, never to permit the growth of one tree to injure that of another.

An important matter also in the care of trees is the pruning of all broken or diseased limbs or branches, by cutting the limbs off closely at the bole of the tree, leaving no stumps projecting, which the bark cannot grow over, to carry rot into the tree. Cut off smooth, and paint over the wound with coal tar.

If the soil is good, no preparation for planting is necessary, other than loosening up the ground for each tree for a space of from seven to ten feet in diameter, and from two to three feet in depth. When the soil is poor, not less than ten yards of good soil should be substituted for an equal amount of poor soil excavated from the hole. The same loosening up of the ground should be made.

If planting is worth doing at all, it is worth doing well, for on this depends the well-being of the tree. It is safe to say, if you have $20 to spend on planting a tree, let $19.50 of the amount be spent on the preparation of the ground to receive it. It should be borne in mind that the same conditions which will produce a good hill of corn, will grow trees well, and nothing else will serve.

In the planting of groups or masses of trees for ornamental or woodland effect, the soil should be plowed and subsoil plowed several times. The trees should be planted thickly, always remembering the old gardener's motto: "Plant thickly, but thin quickly." More trees are ruined from crowding than from any other cause. The plantation should be treated precisely at a good farmer would treat a crop of corn. Give clean cultivation. Thick planting gives the advantage of shelter (each tree protects the other), and the further advantage of a greater number of trees from which to select the permanent ones. It also gives the effect of foliage mass the quicker.

These notes are written in the hope that they may help to intensify the interest now manifested in the planting and protection of public trees. The subject is of such importance as to merit the earnest attention of all.

The insect question I have not touched upon. This, however, is so exhaustively covered by our entomologists that no one need work in the dark for want of knowledge of how to exterminate insect pests, or, at least, to hold them in check.

BIBLIOGRAPHIE: FRUTICETUM VILMORINIANUM.

From the Revue Horticole, by Andre.

Translated by J. F. Huss.

We have just received a volume of considerable importance published by Mr. Maurice de Vilmorin, entitled "Fruticetum Vilmorinianum-Catalogue primarius." It is, in fact, the first catalogue of shrubs of 1904 for the collections of Mr. de Vilmorin at his property at Barres, near Nogent-Sur-Vernisson (Loiret).

This is not an arboretum properly. Such a name should be reserved especially for the assembling of trees, like the property at Barres, which contains a real collective nursery, especially rich in evergreens and which has become the property of the State, under the charge of the Forest Department.

The author has placed his principal stress upon the shrubs, as indicated by the name "Fruticetum."

It is well known that Mr. Alphonse Lavallee had established on his property at Segres (Seine-et-Oise) a great collection, a description of which was published in 1877. After his death, this collection was not continued. But Mr. Maurice de Vilmorin, who had already largely developed a very interesting collection at the Barres, has obtained from Mrs. Lavallee the authority to take at Segres all these collections and improvements of the celebrated Lavallee, and has thus added greatly to his already large cultivated collection the nucleus of his increased nursery system. It is now nearly ten years since this plantation was established and it constitutes, to-day, the total material for the recently published catalogues. The usefulness of such a work is indisputable.

It is very important to adjust a correct nomenclature. By giving close scrutiny to questionable synonyms, the best name could be preserved together with the name of the rightful originator, and the inaccuracies which are creeping into many large collections would be avoided. Horticultural nurserymen's catalogues and lists of shrubs could be assured of exact pronunciation and the correct names of plants. Such an enterprise is by no means a small study. It requires a broad thorough knowledge of vegetation; patience, perseverance, a vast correspondence with specialists, the knowledge of several languages, a good information of libraries, and finally, prompt investigation for the classifying of species, and the discussion of their character with comparisons with existing records.

Mr. de Vilmorin has been aided in his delicate task by Mr. D. Bois, Assistant at the Musée de Culture Naturelle. Mr. D. Bois is an expert botanist and well-skilled in the science of plants. It is to his able coöperation that the catalogue of which I speak owes a great amount of descriptive information regarding new and rare species. Accompanying it is a form due to the rare talent of Mme. D. Bois, another artist.

This important catalogue makes a grand volume, 80 of the 234 pages illustrated with numerous and excellent plates. Outside of the Conifers, which are not contained herewith, it constitutes a complete enumeration of the deciduous and evergreen shrubs which are proving hardy to the climate surrounding Paris and Orleanais, with a few interesting species, the hardiness of which has not yet been proved, and which thus far have not been appreciated. It will list over 3,000 species, varieties or hybrids, classified with the greatest care.

Among the new and rare shrubs noted we mention particularly a very interesting series of American shrubs and especially great numbers of cratæguses with many shrubs originally brought from China and from the borders of Thibet, such as Davidia involucrata and Lonicera Thibetica C. Following are some of the species which have not been described heretofore, and which are but little known: Clematis Meyeniana heterophylla, Euptelea Francheti, Decaisnea Fargessii, Berberis sauguinea, B. dictyophylla, Ampelopsis cantoniensis, Prunus tomentosa, P. canescens, Sorbaria assurgens, Rosa soulieana, Cornus foliolosa, Cotoneaster augustifolia, C. alpressa, C. Cullata, C. Francheti, Philadelphus Magdalenæ; Ribes Warsceuiesii, Lonicera dellexicalyx, Osmanthus Delavayi, Corylus Tibetica C.

In the compilation of this work Mr. de Vilmorin has rendered to the botanist and horticulturist a careful and reliable terminology of the shrubs. He is to place at once at the disposition of persons desirous of enlarging their collection or making exchanges, numbers of the species he may own and is at present ready to send on request, branches, grafts, or cuttings, seeds, or young plants obtained from seed. Only the expense of transportation will be charged, as no commercial value is fixed on these plants.

By this generous proceeding Mr. de Vilmorin will be enabled to distribute the species which he has been the first, or one of the first, to introduce into Europe. His relations with such explorers as Abbi Armand, Davis and Delavay, the missionaries Farges and Soulie, and other Lazarits, etc., have afforded him opportunity to enlarge very extensively the importation of plants from these far distant regions, to the great advantage of our gardens.

PITTSBURG DAMAGED BY HAIL

Pittsburg was visited on Monday, April 10, with a fierce hailstorm, which riddled most of the private and commercial establishments. Hail, rain, wind, and lightning conspired to work ruin, and the damage can be but conjectured as yet. It was one of the most severe and disastrous hail storms in the history of the city. Following a rain that accompanied a thunder storm, there was a bombardment with hailstones measuring form one to two inches in diameter; these pelted down with great force, breaking anything of a fragile nature. The damage done by the storm will reach many thousands of dollars. Among the larger losses are the Phipps Conservatory, Schenly Park, 8,000 panes of glass broken; loss to plants and structure about $2.000.00. A. W. Smith, the 6th Avenue florist, suffered the most, two-thirds of his greenhouses being demolished. H. C. Frick's, palm house and show houses were smashed up pretty badly. Alexander Peacock's private conservatory was also a victim. J. B. Murdock's greenhouses were nearly all broken up. In the Allegheny Conservatory they sustained a loss of over 800 panes, and private conservatories and residences in the East End all sustained great damage.

BUSINESS CHANGES

Cohen & Co., Boston, have failed.

Peat & Fanning succeed Evans & Peat at Norwalk, O.

The Graham Nursery Co. has been incorporated at Mechanicsville, Ia.

The Geller Florists' Supply Co. has been incorporated to do business in New York City.

The Worcester Conservatories have opened a retail store at 406 Main street, Worcester, Mass.

N. Masconesotes is the successor of T. D. Masconesotes State street store, Chicago. The north-side branch of the house will be discontinued after April 1.

J. Zech and Mathias Mann have taken the M. Winandy wholesale store at 51 Wabash ave., Chicago. M. Mann is a carnation grower and J. Zech was formerly with E. C. Anling.

John Mackenzie has purchased the greenhouses of W. C. Stickel at North Cambridge, Mass., and will add another house. Mr. Stickel will devote his time entirely to his Lexington establishment hereafter.

Chas. Ed. Grunewald has bought out the interests of his partner and will continue as successor to Roberts & Grunewald at 247 Columbus Ave., New York City. Mr. Roberts will open up business at another location.

Thorburn & Co., New York's old reliable, seem to be doing the greatest seed business in their history. An extra force is on, and business is being rushed day and night, and all orders are only accepted subject to unavoidable delay in filling.

WANTS

Advertisements in this column one cent a word. Initials count as words. Cash with order. One insertion free to any gardener or florist seeking a situation.

GOOD MEN

When you need good men, skilled or unskilled, write:

THOS. H. BAMBRICK

34 South 7th St., Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

FOR SALE. — Five greenhouses stocked with carnations, roses, asparagus, etc., 5,000 feet of glass, hot water heat; 8 minutes walk from station, 1 minute from electrics; established 30 years. Ill health cause of sale. A. F. BELCHER, Foxboro, Mass

SITUATION WANTED. — As working foreman, understands growing roses, carnations, and general stock. Sober and good references, married. Please state wages to B. ALLMOND, 106 Church Street, Winchester, Mass.

WANTED POSITION — By practical gardener. Familiar with engineers' plans. Entirely capable in the management and laying out of new grounds. Competent under glass and outside. Fruits, flowers, and vegetables. The formation and care of lawns, drives, etc. Ready for engagement instanter. Wife only. Middle age, well known and recommended. Address B. R. E., 468 West 23d St., New York City.

WANTED. — A young man used to vegetable garden work on a private place. Single. Apply stating wages to HORTICULTURE, No. 140 G, 11 Hamilton Place, Boston.

The New Rose WELLESLEY

Is a welcome addition to the list of forcing roses

Color is bright pink, with reverse of petals clear silvery pink, thus producing a combination that is exceedingly effective either in daylight or in artificial light.

Growth is very free and exceptionally vigorous and will prove satisfactory every month in the year.

Delivery strictly in rotation, beginning April first.

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

CUT-FLOWER MARKET REPORTS

BOSTON After passing through a very dull week, this market finds itself in a state of uncertainty as to present values and Easter possibilities. A few dark days have checked the enormous product which it last week staggered under, but altogether the situation is not encouraging. As to Easter and the lily question, it begins to dawn upon us that the growers, in their anxiety to avoid being too early, are, most of them, obliged to do a little hustling in order to get the stock in on time. American Beauty roses are coming on in elegant shape and are likely to interfere somewhat with the prosperity of other staple varieties. One, however, which it cannot hurt, is Queen of Edgely, which will give the Beauty a pretty tussle for supremacy in this market. Mr. Joseph Bennett of Montreal, has been here a couple of days looking over the situation and incidentally his legion of old Boston friends.

CHICAGO There was no change from the depressed condition of last week. American Beauties are coming in larger quantities, the quality improving daily. Bride and Bridesmaid are equal to any demand. Uncle John is superb. Mme. Abel Chatenay at P. Reinberg's is coming on 3 to 4 foot stems, flowers perfect. Carnations continue in over-supply; the receipts for the last two days, however, were below normal, resulting in a slight advance for fancy. Bulbous stock, especially tulips and outdoor jonquils, is plentiful. Cut pansies, southern lilac, spiræa, iris, forsythia, and trailing arbutus have made an appearance. Violets are losing in quality and singles are entirely out of the market. Green goods in ample supply.

NEW YORK General trade conditions in the cut-flower territory are by no means encouraging. The demand is very unsteady; one day's brisk business is followed by many of pronounced dullness. The market is very well supplied with all varieties of stock and the quality is all that could be asked for. Violets are rapidly deteriorating and their prosperity has been more than menaced by the immense cargoes of southern daffodils and jonquils which have been piled in here for the past two weeks. They are sold on the streets for a trifle and have effectually stamped out what little life there was left in the violet trade. These goods should go to the produce men instead of the cut-flower markets; they would be distributed through different channels and, it is believed, with more ample returns for the shippers.

PHILADELPHIA Business improved a little, especially towards end of the week, but is still and far from what it ought to be at this season. No great spurt is looked for until next week. By Holy Thursday the rush should be on. Plant orders are reported at Pennock's and Niessen's to be heavy, most of the stores being anxious to get their orders in early so as to get the pick of the stock. Godfrey Aschmann says he still has some fine azaleas left; but they are going fast. There is a great scramble for good azaleas this year in our neighborhood.

PITTSBURG During the past two weeks we have experienced the dullest period since the advent of Lent. There is very little business being done, though stock comes in plentifully and equal to demand of all grades. Funeral work is the main factor to dispose of the over-supply of carnations and lilies. Pot plants are in demand, and a rushing business is looked for during Easter. Prices are kept up, and lilies will command good figures, especially for well-grown pot plants.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅛- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

Exterior view of "U" Bar greenhouses designed and erected for Mrs. O. Thorne, Millbrook, N. Y.

We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

The beauty and value of this new fern to be introduced Spring of 1905 can best be appreciated by seeing it. It is a sport from the Pierson Fern (Nephrolepis Piersoni), but it is very much more beautiful and of greater commercial value. It is as different from the Pierson Fern as that is from the Boston. The small side pinnae are again subdivided, producing an exquisite and beautiful effect, changing the entire character of the fronds, which measure less than half the length and about twice the breadth of the fronds of the Pierson Fern. The fronds also assume an entirely different form, the side pinnae standing at right angles to the mid-rib of the frond, on edge rather than flat, as is usual, making both sides of the frond equally beautiful — entirely different from any other fern.

The plant is very dwarf, only about half the height of the Pierson Fern, and of very much more compact habit. Taking it altogether, it makes one of the most exquisite plants and one of the most valuable for table and house decoration that has ever been introduced. The cut fronds, on account of their beauty, will be in great demand for table decoration, design work, and for use in boxes of loose flowers. Well-grown plants make most magnificent specimens. We think there is nothing in the fern line that is so handsome as this beautiful fern when well grown. It is a wonderful improvement over Nephrolepis Piersoni in every respect, both in regard to beauty and habit of growth.

PRICES:—2½-inch pots, $9.00 per doz.; 50 plants at 60c. each, 100 at 50c. each, 500 at 45c. each, 1000 at 40c. each; 5-inch pots, $18.00 per dozen; 6-inch pots, $24.00 per dozen; 8-inch pots, $36.00 per dozen; 10-inch pots, $60.00 per dozen.

DREER'S HARDY PHLOXES

HARDY PHLOX PANTHEON

We have an immense stock of the following popular varieties of Phloxes, the best of their respective colors, in one-year field-grown plants which were back and are now potted into three-inch pots, in prime condition for planting to give immediate results.

AQUILLON. Bright deep pink, crimson eye.
BRIDESMAID. Pure white, with large crimson eye.
BLANC NAIN. Dwarf pure white.
BOUQUET FLEURI. White, with deep rose eye.
CHAMPS ELYSEE. Fine rich purplish crimson.
ECLAIREUR. Purplish crimson, with light halo, large flowers.
EUGENE DANZENVILLIER. Lilac, with white edge and center.
JEANNE D'ARC. A fine pure white.
MOLIERE. Salmon rose, with deeper eye.
PANTHEON. Deep salmon rose, free and effective.
PROFESSOR SULIEMAN. Bright lilac rose.
SEMIRAMIS. Purplish magenta.

Any of the above varieties 75 cents per dozen; $5.00 per 100; $40.00 per 1000

Scarlet Varieties

COQUELICOT. The most popular of the reds, bright orange scarlet, with carmine eye.
ETNA. Scarlet, with dark crimson eye.

$1.00 per dozen; $8.00 per 100; $70.00 per 1000

We are headquarters for all Hardy Perennial Plants. Trade Catalogue mailed to all Florists.

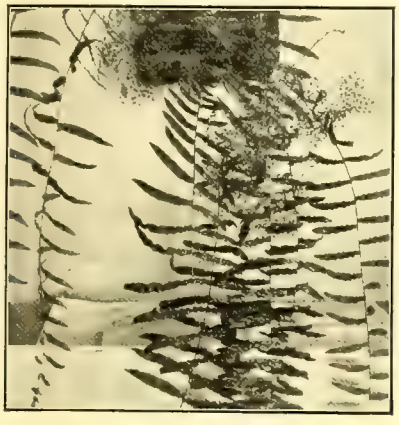
Ferns for Every-Day Use

POLYPODIUM

Continued from last week's issue

(Goniophlebium)
POLYPODIUM NERIIFOLIUM CRISTATUM



GONIOPHLEBIUM

P. loriceum from West Indies and Mexico has a very stout creeping rhizome, with fronds over one foot long, about five inches broad, pinnæ entire, sickel shaped, enlarged on the upper side at the base.

P. neriifolium or Braziliensis from West Indies and South America, has a stout scaly rhizome, the fronds long-stalked over two feet long, and about six inches broad; the leaflets are entire, and of a heavy texture. There is a form P. n. cristatum which has the top of the leaflets cristated, and gives the fronds a feathery appearance.

P. sub-auriculatum from the Philippine Islands is the best known of this section, and a very useful plant for hanging baskets; from a mid-creeping rootstock, the fronds, sometimes eight feet long and three inches broad are pendent; the leaflets relatively narrow, are set apart, slightly dentated and eared at the base. The spore masses, like in a few other species, are immersed. forming little protuberances on the upper surface.

P. verrucosum from the Philippine Islands has long-stalked fronds, about four feet long and one foot broad, arching; the numerous entire pinnæ are slightly hairy on both sides and the marks of the spore masses are very apparent on the upper surface.

(Goniophlebium)
POLYPODIUM SUB-AURICULATUM

P. fraxinifolium from Central America has long-stalked fronds about three feet long and one broad; the slightly notched leaflets, from one to three inches broad, are pointed and narrow at the base, and of feathery texture.

(Niphobolus)
POLYPODIUM LINGUA

POLY. TRICUSPE POLY. LINGUA CORYMBIFERUM

GONIOPTERIS

Goniopteris crenatum from West Indies. The frond is simply pinnate, the terminal pinnæ are long, and has two to four pairs of lateral ones, from six to eight inches long and about two broad in the middle.

P. diversifolium from Central America. The frond, one to two feet long, long-stalked, simply pinnate, with long narrow leaflets, nicely veined.

(Goniopteris)
POLYPODIUM OBLITERATUM

P. obliteratum from Jamaica has a long stalk terminated by long pinnæ and with a few lateral pairs; they are round, dentated half-way to the midrib, and of rough, papery texture.

P. reptans from West Indies and Central America has fronds about fifteen inches long, short-stalked, two to three inches broad, simply pinnate, and arching, and make roots at their extremities.

PHLEBODIUM

P. aureum from Florida and West Indies, that much-known plant, is very useful with its large glaucus fronds; the creeping rootstocks grow very long and large; they branch out readily when cut back and make more bushy plants.

P. a. areolatum from South America, P. a pulvinatum from Brazil, P. a. sparadocarpum or glaucum from South America are three very good forms from aureum; the two first ones are more divided, and the third is the most glaucus of them all.

P. nigripes from Venezuela forms a stout, black, scaly, rhizome; the fronds simply pinnate, grow on long stalks; they are leathery in texture and rough on the underside.

P. Schneiderii is a hybrid raised in England from seedlings of P. aureum, and a form of P. vulgare (elegantissima). The fronds are about eighteen inches long and broad, are three

(Phlebodium)
POLYPODIUM AUREUM

times divided in narrow, undulated, overlapping leaflets, with very graceful effect. The frond is not flat but branching in all sides. This fern has to be propagated by division, as it rarely gives good spores. I have a few sporting from it this year. I do not know what they will look like. It is a fine plant.

PHYMATODES

In this section the spore masses are sunk in a deep cavity, which makes them prominent on the upper surface of the frond.

P. longissimum from India and South Sea Islands has fronds one to three feet long, simply pinnate, of leathery texture, leaflets four to six inches long, and one and a half broad. The marks of the spore masses are very apparent on the upper surface, the brown, scaly rhizome is wide creeping.

P. nigrescens from the South Sea Islands has the fronds two to three feet long by one and a half broad. They are borne on erect firm stalks, they are cut in long entire lobes not unlike a big Pteris cretica; the marks of the spore masses are very prominent.

P. leiorhizon from North India has fronds from two to four feet long and half as broad, on long stalks, simply divided in long narrow pinnæ of strong texture.

P. hemionitidium from South China and India has the frond entire, one to one and a half foot long, and three inches broad.

P. pustulatum from New Zealand is another species with entire fronds, sometimes cut into broadly spear shaped lobes; it is of thin texture, and the veins are beautifully marked.

DRYNARIA

These are noble exhibition plants, but only useful for big decorations; their true place is in the stove house. They all have large deep-lobed fronds, nicely veined.

P. Meyenianum from the Philippine Islands, P. Heracleum from Java and Philippines, and P. coronans from Asia are some of the best.

NIPHOBOLUS

This section has the brown-reddish spore masses set very near together and they cover the entire back of the fertile fronds.

P. lingua from Japan and China is a very hardy fern, the fronds entire, stalked, narrow on both sides, are of very thick texture; dark green, with the under surface brown.

P. l. corymbiferum is a form imported from Japan, which has the top of the fronds branched and crisped.

P. l. Heteractis is a Himalaya form. The fronds are broader, spear-shaped, and the under surface is of a creamy white color.

P. tricuspe from Japan and Korea is smaller and of softer texture, the base of the fronds lobed.

A. Hemsley

Some Greenhouse Pests

II

THRIPS

Thrips, or blackfly as this insect is called in Germany, are spindle-shaped, active, slender, leaf hoppers with sucking mouth-parts. They are about $\frac{1}{12}$ of an inch long. The true thrips live only in greenhouses, where they work havoc sucking the juices from leaves and flowers, being destructive in larval, pupal, and perfect stages.

Very little is known of the life-history, no males ever having been found. The insects themselves are very active, and may exist in a house for years, their presence being made known only by the results of their work. The adult female is black, extremity of abdomen bright red, antennæ and legs white, the wings hyaline and very slender.

The habitat is District of Columbia, Iowa, Massachusetts, and Michigan.

The food-plants are principally herbaceous plants, azalias, dahlias, ferns, verbenas, vines, carnations, pinks, and aspidium. *Treatment.* — Syringe plants. Wash them with soap-suds. Vaporized tobacco juice is said to help. Put braziers of charcoal in the houses, and on these place saucepans containing one pint of tobacco juice of 14 degrees strength. When this is reduced to a thick syrup add one pint of water. One pan to 2,000 feet of house is sufficient. No plants are injured by it, the cost is slight, 12 to 15 cents a quart, and it is effective. Another remedy is to burn pepper on a hot shovel, carrying this down through the house.

RED SPIDER (TETRANYCHUS TELARIUS)

The red spider is not a true insect, but a mite, as it has eight legs, while all true insects have but six. there are several species in our country, but they have never been differentiated to any great extent. The mite is roundish in outline, .04 to .06 of an inch in length, and covered with bristles. The legs, eight in number in the mature spider, six in the young, are the same length as the body. In color red predominates, although there are shades of brown, green, and yellow. Adults can be distinguished with the naked eye, but a glass is necessary to find eggs or young.

Little is known of the life-history. The insect lives over winter, when outdoors, under leaves and litter, possibly only the female surviving. If this is the case, when spring comes she lays eggs that produce only males, which on maturing mate, and the resulting eggs bring forth young of both sexes. To protect the eggs and young as well as the adults, the females spin a web which appears as a sheen on the under surfaces of the leaves. In this they live. Probably there is no period of rest in the greenhouse, the breeding going on uninterrupted. Two moults are passed through before reaching maturity, the whole covering a period of three weeks. The spiders are very active and spread rapid from plant to plant.

Maine, New York, Pennsylvania, District of Columbia, Illinois, Massachusetts, and Delaware contain the worst infested regions.

The red spider will eat almost anything, but proves most destructive to violets, carnations, and roses, sucking the juices, thereby distorting blossoms and weakening the plants. *Treatment.* — No very successful remedy has been found. Spraying with kerosene emulsion, immersing plants in it for 15 to 25 seconds, spraying with salt water, 2 ounces to a pail of water, all help, but to be effective must be repeated often. The most practical method is to thoroughly syringe the plants every few days, with water under a pressure of 20 pounds, hitting the under sides of the leaves in particular. Choose sunny weather and repeat often.

R. I. Adams.

Clivia (Imantophyllum)

This South African amaryllidaceous plant deserves much more attention than we have hitherto accorded it. Very few flower-spikes of any kind can compare with these to draw attention. Undoubtedly the best and most practical way of growing them for general conservatory or window decoration is in 7- or 8-inch pots; this size affords room for one to two large crowns, that in turn produce one or two large and handsome flower-scapes, with flower umbels of corresponding proportions, containing according to excellence of culture and variety, from sixteen to twenty orange-scarlet individual flowers. In this manner they are easily shifted and placed where they may be most effective.

For exhibition purposes, however, they are most effective when grown in large tubs where any number of crowns can be had, and in this way if well-flowered they make a superb show. On account of their bold, handsome, strap-shaped green foliage, they can be put to good use when not in flower in diminishing the hard and stiff lines of massive halls, at the foot of generously proportioned stairways, in bay-windows, fire-places, etc.

As they make their growth in spring and early summer it is well to give them at this period all possible chance to mature the same, by placing them in green-houses of medium temperature; they can be placed out of doors in this locality in the latter part of May in a partial shade, that is, shade cast by trees but not immediately under them. The north side of a wall or building that is sufficiently high to protect them from the fierce mid-day sun is an ideal place for them. Except for the purpose of getting plants of large proportions in as short a time as possible, frequent pottings are not necessary; they flourish and flower in cramped quarters, provided they are generously looked after with liquid stimulants; they require much water when growing, which means from early summer to late fall. As they have fleshy roots, tough, fibrous soil, chopped somewhat rough, with leaf mould, or, better still, spent mushroom-bed manure, charcoal, and a little lime suits them first-rate. I don't wish it to be understood by this that they are anyway exacting as regards soil requirements, for they are not, being exceptionally free from miffiness of any kind.

On the continent of Europe they have long been much prized for their value as house plants, as well as for conservatory embellishments; their popularity is still in the ascendant, as I learned a twelvemonth ago in Germany; they were frequently noticed in the windows of gentlemen's dwelling-houses. Belgian firms have been especially noted for the cultivation and introduction of fine varieties of these plants. English firms follow the Belgians in appreciating their decorative value, and have done considerable towards the production of finer varieties. The late William W. Bull of London, did, in his time, more than any other in England to popularize them; of later years the famous Veitch firm has taken them in hand, and to good purpose, as they have produced very fine varieties, an achievement characteristic of this noted firm in all branch lines they choose to take up.

Clivia miniata, is yet considered of value by some writers, but I fancy those are less well acquainted with the new kinds, which have so much eclipsed miniata as miniata is superior to the drooping-flowered varieties of which Clivia nobilis (note the specific name) is the pioneer; the latter are mere weeds in comparison with the former. Personally I consider C. miniata entirely out of the race, and not worth house-room, since we have so many finer kinds to choose from. Its chief value now is historical rather than useful, being the original source from which the finer varieties and what I might aptly term the upright umbellata kinds, have sprung. C. m. superbum was one of the first noticeable breaks from the original, then followed maximum; Martha Reimer comes on the scene soon after, each new-comer eclipsing the former in some greater or less detail of excellence; chiefly, larger and compacter flower umbels with more brilliant coloring. The last of the above trio had it all its own way for a long while, being a stronger grower, and conspicuously superior as to texture, size, and coloring of flowers, the latter being bright orange-scarlet. C. m. Baroness Schroeder, C. m. Ambrois Verschaffelt comes next on the stage with many others, to dispute the rights of Martha Reimer for premier honors; they in turn to yield to the still newer ones, such as Favourite, Admiration, Excellent, etc., of Veitch's; there can be no mistake in purchasing the latter as they are among the top-notchers.

I would say that there are a great many named varieties, and although marked distinction is not wanting between some kinds, quite a number of them present none, or at best they are microscopic. Clivia Aitoni, C. nobilis (or Imantophyllum nobilis, as it is better known) with I. cyrtanthiflorum and I. Gardnerianum are the drooping-flowered kind, with numerous drooping, insignificant dull-orange, green-tipped flowers, the first of those being the pioneer introduction, I believe. I make mention of them here as being mere weeds compared with the others, as stated elsewhere, to put my young friends that have not yet become acquainted with those plants on their guard against purchasing worthless varieties. In conclusion I would state that one of the other good qualities of clivias is their simple and modest requirements as regard winter treatment, a temperature of forty degrees suiting them very well, provided they are not drenched with over-doses of water; on the contrary they ought to be kept on the dry side in low temperature, but not dust-dry. They respond very readily, when introduced into warmer quarters, in developing their showy flower-spikes.

N. Finlayson

Echoes from England

International Flower Shows

It is announced that a great international horticultural exhibition will be held in Paris from May 20 to 28. This will be the most important show of plants and flowers in Europe during 1905. It is many years since we had a large international plant and flower show in this country, and it is to be hoped that before long it will be possible to inaugurate one. The suggestion has been made and probably the matter will be taken up and the proposal eventually become an accomplished fact. One of the most famous European plant exhibitions is the Ghent Quinquennial; this was last held in 1903; it occurs, as its name implies, every five years. Exhibitors and judges from almost every country in Europe attend this gathering, probably unique in its cosmopolitan character.

The general arrangement of the exhibits at a continental flower show is far more attractively carried out than at our own exhibitions. Large, bold groups of plants are arranged on the floor after the manner of flower beds, so that the whole exhibition resembles nothing so much as a garden containing all that is most beautiful in the world of flowers. Not only individually, but collectively, are the plants seen at their best.

From what one can learn by the illustrations in Horticulture and other of your gardening journals the same idea appears to be carried out in America, at any rate, to a large extent. In England, unfortunately, this is not the case. Usually the visitor must make his way through banks of plants and flowers, many of them far too high to be properly seen, and crowded together, and thus while the material is of the very finest, it never shows to the best advantage. When a bird's eye view of the show can be obtained the display lacks all the charm and beauty so characteristic of continental flower exhibitions.

A New Tree Carnation

The latest addition to the rapidly increasing list of tree carnations is at any rate up to date so far as its name is concerned, for it is called General Kuroki, a name now familiar the world over. It is as good as its name, for when shown at the Royal Horticultural Society's meeting yesterday (March 14th) by Messrs. Cutbush & Son, Highgate, London, it obtained an award of merit, and was generally admitted to be the finest new variety seen for a long time. The color is best described as crimson-scarlet. It has very long stems and the calyx is strong and does not burst. While remembering that we are indebted to American growers for the best new tree carnations, I think General Kuroki quite worth bringing to your notice.

Italian Hyacinths

An excellent display was made on the 14th in the Horticultural Hall by Messrs. Sutton & Son, Reading, with a large group of their giant Italian hyacinths. These are intermediate between the useful early flowering Roman hyacinths and the stiff, ordinary Dutch varieties. They are very free flowering and sweetly scented, bearing spikes of blue, white, or pink blooms. They are intermediate between the Roman and Dutch both in habit of growth and flowering, and also in the blossoming season.

Cineraria stellata Hybrids

We have few more useful or more popular early spring greenhouse flowers than the hybrids obtained by intercrossing Cineraria stellata and the ordinary large-flowered forms of cineraria. The flowers, which are intermediate between the small stellata and the large richly colored blooms, are most freely produced, and the plants are very useful either as decorative plants or to provide cut flowers for the home. They have been greatly improved by the hybridist within the last few years and many of the colors that make the large-flowered varieties so much sought after have been instilled into the hybrids.

A New Clove-Scented Stock

"All the year round" is the name of this new variety, and it was so called because it is said practically to be a perpetual flowerer. It is a perennial, producing white clove-scented flowers. It is well suited to pot culture as was clearly evidenced by the large group of pot plants shown by Mr. Mortimer, Farnham, Surrey, before the Royal Horticultural Society yesterday. It is a plant that will probably be a good deal sought after.

Harry H. Thomas

London, March 15.

Acalypha Macafeana

Where something is wanted in bedding that will have color and attain considerable size in a very short time, few plants compare with this acalypha. It is easily propagated from cuttings taken from plants that had been saved for the purpose. The cuttings should be taken from the side shoots and not from the main stems as these are, as a rule, too pithy, and but seldom break out or grow as rapidly as the others. If the cuttings have been rooted by the first of March, so much the better, but I have often had nice plants to bed out the first week in June from cuttings put in about this time. After the young plants have been potted for the last time into 4-inch pots, and made considerable roots in these, they ought to be gradually hardened before being planted in the open, otherwise they will lose their leaves after being planted and get checked besides. A cold frame is the best place to harden them in. There they will get plenty of light, and all the air needed can be admitted without injury to anything else.

David McIntosh.

Carnation Breeding

Read at Champaign, Ill., by C. W. Ward

The complexity of the subject of carnation breeding, its immensity of detail preclude but a superficial skimming over of the subject in the limited time allotted to me.

The original carnation known to hybridizers for some 2,500 years before the Christian Era was a five petal single bloom about one inch in diameter, of a pinkish-mauve color.

The present carnation with which we are working is the product of several centuries of culture and hybridization. It is an open pollinated species and mother plants can be used both from the hybrid plants as well as in breeding upon the same plants or upon the same variety. Once secured from seeds a variety is easily perpetuated by propagation from cuttings which are secured in abundance and may be easily rooted. Improvements in varieties may be made by bud selection and bud variation as well as from seed variation due to hybridization. In raising varieties from hybridized seed very few improved sorts are produced, the proportion being about one good variety for each one thousand hybrids grown.

Up to the present time, I have been breeding for color alone, basing my work upon the theory that any laws developed in color work would hold good when applied to the development of other desired qualities.

The tools which I use in my work are very simple indeed, consisting of a pair of delicate tweezers and a microscopic magnifying glass. The method employed is to find the anther just bursting so that the pollen is in a condition of dry powder. The anther is removed by means of the tweezers, and the pistol of the flower desired to be fertilized is lightly touched along its entire length by the pollen bearing anther.

In order to do my work with reasonable method, I have divided it into sections as follows: — Crimson section, comprising crimsons or scarlet maroon in color; dark pink section which comprises all rose, cherry, and deep pink tones; light pink section, which comprises the light salmon or daybreak tints; scarlet section, which comprises all of the colors which may be termed red or scarlet; white section, comprises only the creamy white and snow white tints; yellow variegated with scarlet, crimson or pink upon yellow grounds, as the yellow varieties are almost invariably marked with pink, scarlet, or some other tint; white variegated section, comprises varieties of a light pink with scarlet or crimson markings. The blue section comprises varieties showing some tendency towards the blue in color. This latter section has not as yet produced anything that might be termed a blue as invariably there is enough pink in the make-up of the color to shade the tone into purple or mauve. The crimson, dark and light pink, scarlet, and white sections have been fairly well fixed, but the yellow, white, and pink variegated and blue sections will be very difficult to fix as they are essentially mosaics and there is a constant tendency towards variation in all hybrids produced from them.

The bulk of my profitable varieties can practically be traced to the variety, General Maceo, which was the result of a cross between the English variety, Winter Cheer, and Mr. Dorner's American variety, Meteor. The original plant of Maceo had a very peculiar habit, being almost a climber, and was dug from the frozen ground after all supposed good sorts had been taken into the field, its only recommendation being an intensely colored large bloom on a plant having a habit somewhat resembling a creeping grape vine in growth, but, by selection from bud variations, it was built into an immensely profitable commercial variety.

C. W. Ward

In hybridizing carnations we sometimes meet with what is termed seed sports. These have been invariably light pink varieties (more or less marked with crimson edgings and stripes) that have been produced by crossing crimson sorts which have comparatively pure crimson pedigrees for several generations.

Aside from its commercial importance, there is a sentimental side to carnation growing. The production of new hybrids which are distinct improvements upon existing sorts is always a pleasure and serves to keep one thoroughly interested in the Divine Flower, and amply repays for the close application necessary to produce practical improvements.

At the present time the commercial value of the carnation grown in this country has risen so that the calling may be considered one of the substantial professions. The annual value of the carnation product reached five to six millions of dollars when we consider both the sales of plants and flowers, and the capital invested possibly may amount to fifteen to twenty milllons of dollars, taking into consideration the value of the real estate and buildings devoted to carnation culture.

The improvement in the carnation which has resulted in giving us flowers three times the size that they ordinarily were, with stems four to five times as long, has produced a general advance in the price of the carnation which seems to keep pace with the increased demand. When I first undertook the growing of the carnation, fifty cents to one and two dollars per dozen was considered the retail price. At present two, three, six, sometimes eight and in rare instances ten dollars per dozen is secured. When I first entered the business fifty cents to one dollar up to four dollars per hundred as the maximum price were the wholesale rates. At present two, four, six, eight, ten to fifteen dollars are ruling prices and at certain seasons as high as twenty-five dollars per hundred are secured for the best and most perfect blooms.

The naming of a new carnation is quite a puzzle to the originator and he usually selects the name of some beautiful lady, some particular friend, some important personage, a bird, the names of planets or something that will serve to describe or produce an impression of the characteristics of his flower. In naming my own productions, I have honored the varieties with such names as Governor Roosevelt, The President, Mrs. Roosevelt, Viola Allen, James H. Manley, Robert Craig, and the Cuban patriots, General Maceo and General Gomez.

The carnation has frequently been used in a political sense. It was the McKinley emblem and the campaign flower during the campaign which elected McKinley and Roosevelt, and during that campaign the various carnation growers throughout the country donated many thousands of flowers to decorate the button holes of those marching in the political parades, and at the present time the American Carnation Society decorates the grave of the lamented president with carnations each year on the 29th of January.

The carnation is extensively used as a decorative flower. It lends itself to almost every use in which flowers are suitable. Its varied and delicate colorings, its magnificent pungent, refreshing odor, and its long keeping qualities render it probably the most valuable of all florists flowers.

The Editor Has His Say

Don't forget Arbor Day.

We took occasion in a former number to mention approvingly Vitis rhomboidis as a good window plant. Mr. W. R. Smith tells us that Cissus antarctica, a close ally of the above, is much used in Russia in house decoration and can be recommended for that purpose.

Again the "Mayflower" is with us and once more we hear of the wholesale tearing up and destruction of this most beautiful of the early spring flora, that the blossoms may be sent in barrels-full to the city street pedlers. The practice as carried on, is ruinous and tends to the final extinction of the trailing arbutus in one section after another. With judicious picking and care to molest the vines as little as possible there would be no reason for apprehension.

We hear of instances where the brown-tail moth nests have been laboriously cut from the tops of the trees and then piled up and left, nests and all, in a brushheap! A more intelligent understanding of these things seems desirable. Even a paper with the years and dignity of the Boston *Journal* knows no better than to publish a criticism of the tree cutting in Middlesex Fells which contains the remarkable statement that "on none of the logs was there a sign of a brown-tail moth nest," confusing this insect with the gypsy moth which makes no nest but deposits its eggs on the bark of trees and similar places.

The popular appreciation for hardy perennials in home gardening is increasing very fast. The demands upon the nurserymen who supply such material are the best evidence of this. There seems almost no limit to the call for hardy flowering things from the early spring phloxes down to the last asters of fall. New and improved varieties are sought after with especial eagerness and the nurseryman who makes intelligent preparation for several years to come of this demand, makes no mistake.

Arbor Day's value is not alone in the number of growing trees it may add to the barren landscape, but in its effect on the people and especially the young, in awakening them to the deplorable condition of our once beautiful country, the causes of the despoliation and the necessity existing for every one to do something towards the beginnings of the stupendous work of restoration. Every movement calculated to extend the sentiment of appreciation for arboreal improvement, as opposed to the destructive instincts inherited from our reckless and improvident predecessors, should be assiduously fostered and supported.

The New England settlers were wantonly wasteful of their woodlands and, as in other sections of the new country, destroyed the forests indiscriminately. But on the other hand their affection for the trees was shown in the way they adorned their streets and dooryards with avenues of elms which to-day give an individuality and charm to the New England village which is seen nowhere else in this country. Only the more modern communities are barren and it would seem that the making of beautiful shady streets has become almost a lost art. The paper by J. A. Pettigrew in our two last issues will well repay a careful perusal.

The usefulness of many otherwise successful writers on tree and shrub subjects is greatly impaired by what seems to be an inordinate desire to push the cultivation of various ornamentals beyond their natural latitudes, constantly scheming and contriving means whereby a doubtful subject may be perhaps pulled through a precarious climate. The ultimate results are invariably disappointment and a damper on the enthusiasm of the unsophisticated victim of such advice. We see on all sides, wherever gardens are in evidence, instances of this ill-advised policy which is all right within the sphere of the experimenter, but is all wrong when applied to delude people into filling their gardens with things the life of which is nothing but an annually recurring gamble with the climate.

It is remarkable how people who stand by without protest when a century-old monarch is felled to make room for a street widening or the erection of a building, ready with such excuses as "it was half dead anyway," are prone to throw themselves into a hysterical war-dance the moment an expert in tree-work (whom they call "vandal" or "butcher") undertakes to carry out any plan of improvement which involves tree cutting. An instance of this near-sighted perversity is seen in the clamor let loose this season over the cutting which has been going on in certain portions of the Middlesex Fells reservation. The fact is that the larger part of this territory was divested of every decent tree years ago and the so-called "trees" now being thinned out are most of them nothing but sprout growths of oak and hickory from the half-decayed stumps of their sturdy ancestors and which cannot, under any possibility, ever become trees of any health or value. If, by their gradual removal, young seedling trees can get a chance and a good undergrowth of native brush be encouraged, we may hope that in our children's day this magnificent reservation will have been restored to something like its original natural condition of grand and beautiful forest. And we must depend for this upon seedlings, not clumps of stump growth.

After Adjournment

"Brassocattleyadigbyanoschroderaetankerville" is the picturesque name of a new and pretty orchid exhibited by Lord Tankerville at the Royal Horticultural Society's fortnightly show, at its hall at Westminster. The orchid obtained an order of merit, but it was unofficially suggested that a "nickname" should be found for it as soon as possible. — *Daily Mirror.*

A lighted match carelessly thrown into a wagon filled with straw caused no end of excitement in Hawley street at 12.30 o'clock April 15, and called out from Box 49 all the available apparatus in the downtown district.

W. H. Carr, a greenhouse proprietor of Newton Highlands, after delivering his plants, left his horse and wagon standing on Hawley street while he ate his luncheon. While the gardener sat at his midday meal a cloud of smoke drifted through the lunch room door.

Carr rushed out with a piece of Washington pie in one hand and a glass of milk in the other to find his wagon going up in smoke and the faithful horse doing a Highland fling.

Carr dropped his luncheon and quickly pulled the burning straw into the street, just as a chemical engine swung around the corner. — *Boston Traveller.*

WHOLESOME CHESTNUTS

Don't delay pruning hybrid perpetual roses, and if you want large blooms cut out all the weak wood beside cutting the strong wood well back.

The hybrid tea roses that have been buried or put away in frames require attention; uncover those having earth over them, and admit air freely to those in frames.

Grow zinnias as near the glass as possible, otherwise they will get lanky in spite of you.

To avoid trouble with Nicotiana Sanderæ, grow them in pots until ready to plant them out because they do not lift well out of flats.

Sow onion, carrot, beet, early peas, radish, parsley, spinach, lettuce, and plant potatoes, and a few early cabbage and also cauliflower if they are hardened; if not wait until they are.

Get ground ready for melons. Dig a trench at least eighteen inches deep, the length of your row of frames, fill up the trench with chopped turf and a little well-rotted, (never more than a one-third manure, mind) fill in so as to have a ridge; over this ridge place your sash right away. By doing this you will help warm the soil and make it more comfortable for the seed you will sow very soon. If you want to fool the deadly melon blight, get your vines going as soon as possible.

Try a few Lima beans in pots for planting out later. Break up alternantheras and if you haven't room in the greenhouse for all you need, make a hotbed into which put alternanthera in flats or prick it right off into the soil in the bed; you can have good, well-colored stuff like way.

Pound down all grass edges now while the ground is soft and before the grass grows much. If you don't pound the edges your roads and walks will gradually get too wide, whereas by pounding you push as much sod on to the gravel as you take off with the edging-iron later. Roll your lawns; it will help the grass, and help the poor fellows who push the lawn mowers.

Get cannas started into growth before planting them out.

W. H. Flye, Woonsocket, R. I., retires from the flower business and has sold his greenhouse to Thomas H. Greene, for removal.

CARNATION SPORTS

Prior to the advent of Lawson, carnation sports were of such rare occurrence that when one did occur, it could be named and claimed by the grower with whom it occurred as his origination, or at least as his exclusive stock.

Since Lawson and its descendants have come into existence all claim to exclusiveness in the ownership of a sport must be laid aside, as it no longer exists. Evidences of this fact could be used enough to fill this edition of Horticulture, but it is not necessary to go beyond the "White Lawson." With how many growers did this appear in one year? Answer this for yourself, and you have the answer to all of the others. To-day we are having the same thing in Enchantress and M. A. Patten.

The three Lawson sports that are being sold commercially are, through the wisdom of the men introducing them, being sold exactly for what they are: "White Lawson," "Red Lawson," and "Variegated Lawson."

There are true pink sports of Lawson and light pink Lawsons and Enchantress sports and Patten sports galore to come, and it is to be hoped that the growers will consult their own interests and avoid confusion by leaving off all special names and selling them for "Pure Pink Lawson" and "Light Pink Lawson," following with a description of their color, etc.

Two of these light pink Lawsons have been registered through an oversight of "yours truly," and several more are claiming recognition so that there would be endless confusion in this color alone, if they were given independent names with each grower with whom they occur, and on the strength of these facts this Society cannot in the future register any sports excepting under a descriptive and uniform name.

The three Lawson sports being offered commercially have also been shown at the meetings of this Society and at various Club Shows. This is not only commercial wisdom on the part of the owners, but the only way in which they can be properly disseminated.

To show them before this Society is the one and only way in which to get them before all of the best carnation growers at one time, and next to that in order to reach a still greater number the various Club Shows can be used.

As an illustration, if Smith shows his "Light Pink Lawson" at Boston next meeting and it strikes me as a good thing, I would buy my cuttings from Smith, no matter if Jones, who claimed to have the same thing but did not show it, would offer it at half the price asked by Smith.

Albert M. Herr, Lancaster, Pa.
For the American Carnation Society.

OBITUARY

Edward Fintan, landscape-gardener, of Lynn, Mass., died on April 13, aged 59 years.

Michael Cox, gardener for Thomas A. Edison, died from a fall at his home in Llewellyn Park, N. J., on April 8.

O. S. Phelps, author of the book "The Life of a Tree" and a well-known Adirondack guide, died at Keene Valley, N. Y., on April 18, aged 87 years.

Patrick T. O'Donnell, of Pittsfield, Mass., died suddenly at his home on April 14, aged forty years. He was engaged in the nursery business in Pittsfield for the past fifteen years.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Those growers who have been favored with an outing in Perry Green's launch during past summer, will be pleased to learn that Mr. Green has given it a thorough overhauling this winter and expects to have it in the water again this week.

On Tuesday, April 25, Herbert W. Gleason will deliver a lecture on "Alpine Flowers of the Canadian Rockies," in the Massachusetts Institute of Technology Building at 8 P.M. More than one hundred colored lantern slides will be used in illustration.

I understand that in Holland a fine of five dollars is imposed for every brown-tail nest found on a person's property. Why wouldn't this be a good scheme to try here? The Harrison Square Improvement Association deserves special commendation for the thoroughness with which they have covered the territory in their jurisdiction

I find much difference of opinion among local growers as to the best treatment for carnations after taking them from the cutting bench. Some prefer to pot them in 2's or 2½'s and then move them later into shallow boxes, while others put them directly into boxes from the sand. The advocates of the potting system claim that their plants start more quickly and make a better growth, while the others claim that much time is saved and better plants can be secured by boxing them at once and also that plants in small pots dry out unevenly and unless care is exercised in watering, some are sure to suffer either from dryness or over-watering. My own observation is that equally good results are obtained either way, with the advantage of a considerable time saved by direct boxing.

I recently had the pleasure of visiting the establishment of Thomas Cox of Dorchester, my main object being the inspection of some specimen hydrangeas, and was amply repaid for the journey. These plants are now nearly ready for market, with from twenty-five to thirty-five flowers each. Not a blind shoot can be seen and not a stake has been used to make the plants the models of symmetry which they are. Mr. Cox modestly claims that the soil of his locality is especially adapted to hydrangea culture. The plants, I understand, were potted in 11-inch pots last September and brought into heat during December and grown at a temperature of from 55 to 60 degrees through the winter, with a liberal mulch of cow manure in March. I rather fancy that Mr. Cox could furnish a few more points in regard to his treatment of hydrangeas, if he felt so inclined, but, not being endowed with the powers of hypnotism, I had to be contented with viewing the results which speak for themselves. Every grower has his particular pet which he cultivates for the pleasure it affords him, and Mr. Cox is no exception to the rule, his hobby being cypripediums of which he has a collection second to none in this country.

Thomas F. Matthews.

Our frontispiece furnishes a view in one of the orchid houses of Lager & Hurrell at Summit, N. J. In bloom are seen Dendrobium nobile in profusion, interspersed with a number of hybrids. There are also in sight a few Cattleya Schrœderae, Phalænopsis amabilis, P. Schilleriana, Phajus grandifolius, Oncidium Sarcodes and several more. The rapidly growing business done by Messrs. Lager & Hurrell is one of the evidences of the advancement in popularity which the orchid has enjoyed in recent years.

NEWS OF THE CLUBS AND SOCIETIES

NEW BEDFORD HORTICULTURAL SOCIETY

At the regular monthly meeting of this society on April 11, an excellent paper was read by Peter Murray of Fairhaven, on the Lorraine Begonia. Among other things he said:

"In the first place, to grow these Begonias successfully you must have a warm temperature and a close moist atmosphere, and also partial shade. These begonias want a rich, porous soil, composed of turfy loam leaf soil with a sprinkling of sand and bone meal. No nice young growth can be obtained for propagating until May and June. At this season the plants begin to throw up from the bottom, and these young tops root very readily in May and June, and under proper condition grow rapidly through June, July, August, September, and October. A cutting struck in June, if kept shifted as required during the summer, will be a fine bushy plant in a six-inch pot by the first of November, when the plant begins to set buds and become a mass of flower by the end of November. They continue in this abundant bloom through the winter months until May. There is perhaps a little more looseness and grace of habit in the plants raised from leaf cuttings while flowers are borne in denser and stiffer trusses on those raised from stem cuttings. After the flowering period is over the plants may be cut partially back and placed in heat. Young shoots will spring up from the base, and these may be inserted in genial bottom heat and will soon root. The individual leaves in a green and fully developed state may have about half the stalk cut off; the remaining half with leaf attached, are stuck into nice sandy soil in bottom heat and root as quickly as the stems. When rooted, give the plants plenty of light and air and pot them into small pots as soon as opportunity affords. They require no pinching, but as they become large enough give them larger pots."

THE AMERICAN CARNATION SOCIETY

The report of this society will be ready for distribution in a short time and will be sent to paid up members only, so that any who are in arrears or who would like to get this report and are not members should send $2 to Fred Dorner, Jr., Lafayette, Ind., at once.

Messrs. A. H. Hews & Co., Cambridge, Mass., offer for the meeting and exhibition in Boston next January, a cup to the value of $25, for "the best collection of carnations (4 varieties) twenty-five blooms of each" to be shown in separate vases. This prize will be open to all with either seedlings or named sorts and no restrictions as to color.

Any other firm or grower who desires to give special premiums for this exhibition can report them to President Peter Fisher, Ellis, Mass., of to the secretary.

Albert M. Herr, *Sec.*,
Lancaster, Pa.

BUFFALO FLORISTS' CLUB

The first spring flower show of the Buffalo Florists' Club, which was held April 11 to 14 — at the Sweeney Co.'s store — was in every way a success.

Last fall when the matter of a spring show was discussed, it was found that it could not be held without the assistance of rome one else. A proposition from the Sweeney Co. was taken under advisement, and soon agreed to. Charles H. Keitsch was chosen superintendent; a schedule and rules adopted; and dates fixed, and last week the event took place.

The place where the show was held, is a large, well-lighted and airy room in the Sweeney Co.'s department store. Broad stairways, five large passages, and two big freight elevators, gave ample opportunity for the admission of plants and people. Admission to the exhibition was free to the public — the prizes were liberal, the sum offered by the firm for this purpose amounting to well over one thousand dollars.

The schedule covered two classes, plants and cut flowers. The plant class was divided into fourteen sections, viz: lilies, azaleas, rhododendrons, roses, tulips, hyacinths, lily of the valley, spiræa, orchids, begonias, stove and greenhouse plants, and forced shrubs. And in arrangements, stagings for effect and plant baskets, — in cut flowers — roses and carnations were shown.

In the plant classes everything was of the highest quality; the arrangements were beautiful and striking in effect. In the cut-flower class the entires were numerous, and many of the blooms were innovations even to those in the trade. A fine orchestra enlivened the show with choice selections. The attendance was good and highly satisfactory to all concerned, and the weather was just right.

AWARDS FOR PLANTS

The Wm. Scott Co., 11 firsts, 14 seconds, 14 thirds; Chas. Sandiford, 14 firsts, 13 seconds, 13 thirds; L. H. Neubeck, 7 firsts, 4 seconds, 3 thirds; Lakeview Rose Gardens, 1 second, 1 third; George Urban, 2 firsts, 2 seconds; Wasson Floral Co., 1 first.

AWARDS FOR FLOWERS

The Wm. Scott Co., 2 firsts, 4 seconds, 2 thirds; L. H. Neubeck, 1 first, 1 second; H. Keitsch & Son Co., 2 firsts, 1 second, 1 third; C. T. Guenther, 1 first, 1 second; Wm. Ehmann, 3 firsts, 2 seconds; Lakeview Rose Gardens, 4 seconds, 2 thirds; Chicago Carnation Co., 3 firsts, 3 seconds, 2 thirds; Gus Schoenfeld, 1 third.

Many out of town florists were seen during the week, among them being Robt. Bard, Syracuse; P. R. Quinlan Syracuse; Stephen Rebstock, Waynesville, N. C.; Wm. Ehmann, Corfu; Thos. Mansfield, Lockport; Chas. Guenther, Hamburg, N. Y.

GARDENERS' AND FLORISTS' CLUB OF BOSTON

The club debaters had a rare good time at the monthly meeting on Tuesday evening, April 18, over that prolific subject — the "running out" of varieties. The rose growers, under the leadership of such experts as Alex. Montgomery and W. H. Elliott, completely routed the opposition and showed that, under the methods of propagation and culture prasticed, the rose has been steadily improving and that if certain once-popular varieties have been dropped, it has been for other reasons than because they were deteriorating. The carnation men made a half-hearted stand for their theory that varieties of carnations do run out under so-called forcing conditions, but were unable to break the force of the assertion that old varieties of carnations are retired simply because better ones are constantly coming up to take their place. We are sorry that we have not the space in which to give the interesting dicsussion more in detail and we may revert to it in a later issue. On the request of Kenneth Finlayson a committee was appointed to correspond with the Royal Horticultural Society of London, with a view to co-operation in developing an international sentiment against renaming of varieties. Mr. Farquhar's proposed revision of the methods of making awards at the club exhibitions was adopted. An invitation to visit and inspect the pottery establishment of A. H. Hews & Co., on Saturday, April 29, was accepted. Julius Heurlin was elected to fill the vacancy on the executive committee caused by the resignation of Henry Wild. It was announced that Professor Jackson would give a talk on peonies at the May meeting, and that a glorious field day in June is contemplated. Secretary Craig showed a vase of superb candidum lilies grown from genuine north of France bulbs. Upwards of sixty members were in attendance. Frank Cannell entertained the club with two bass songs, grandly sung.

NOTE

The Society of Indiana Florists held a spring show on April 5, and quite a good display was brought out.

BOWLING AMONG THE ANCIENTS

A very interesting paper was read recently before the Dreiburg Society of Philadelphia by Professor Robhood, of the chair of prismatic anatomy in the University of Kensington. His lecture has been deemed of sufficient importance to be made public.

The professor has made an exhaustive study of the subject of bowling, from the time of its inception in Egypt, during the reign of Emperor Hatrack the Fourth, B.C. 7,963, down to last night's games, and his labors have resulted in greatly enriching the treasury of bowling lore. He has spent four years chiefly amid the ruins of ancient Greece and Carthage, and his investigations show that bowling was highly popular among the peoples who once inhabited those shop-worn countries. Light has also been thrown on matters that have long puzzled the wisest savants. Hieroglyphics that have for ages remained undecipherable, even to Professor Hillprecht, are now known to be bowling scores, as to tell the truth, any one with half an eye should have been able to see long ago. The professor made a number of incisions in the earth that yielded some remarkable disclosures.

At one place, near the ruins of Philopolis, he discovered the rigid figure of a man, in the attitude usually assumed after delivering the ball, who had probably been standing there thousands of years, petrified, no doubt, with astonishment that one of his choicest strike balls had yielded nothing but a measly split.

At another place, at a great depth, was found an incongruous mass of lignum-vitæ balls, human skeletons, Dayton pins, soused pigs' feet, schwartzbrod mit kimmel, Dutch mustard and hard radishes, near which was a pryamid of Bergner & Engel sextiles, showing conclusively that the bowlers of that age attended stricly to business, and seldom went home to meals.

The professor was unable to tell from his experience among the ancient records how to prevent the modern evil of grafting in picking out sides, and the doctor left with a very dissatisfied expression on his face. From private sources, however, we are given to understand that the professor has since come to the conclusion that a system of distance handicapping was in vogue from the position of the skeletons in the act of delivering the ball, leading to the inference that the ancients were thoroughly conversant with *the slide over the line* as an antidote to *the graft in picking out sides.*

Further research will no doubt reveal other interesting coincidences in the way of "ringers" and "dark horses" and the next appearance of the professor is being eagerly awaited in bowling circles, as it will no doubt tend to settle many disputed points that have recently come very near disrupting some harmonious and life-long friendships.

THE MOTH PROBLEM

SECTION OF MASSACHUSETTS STATUTE ON WHICH IS BASED FIGHT AGAINST THE BROWN-TAIL MOTH

"Said board (Health Board) shall order the owner or occupant of any private premises, at his own expense, to remove any nuisance, source of filth or cause of sickness found thereon, within twenty-four hours, or within such other time as it considers reasonable, after notice; and the owner or occupant shall forfeit not more than twenty dollars for every day during which he knowingly violates such order."

As a result of the action of the Board of Aldermen of Waltham, Mass., in making an additional appropriation of $1000 to defray expenses in fighting the brown-tail moth the Board of Health is making arrangements towards putting five gangs of men to work immediately removing the nests from trees.

In compliance with a request from the State Board of Health of Massachusetts, the Metropolitan Park Commission is now having the moth nests destroyed on their diffcrent reservations. The work at Waverley Oaks Park has practically been completed, and other sections are now being looked after.

The Boston Board of Health has at last waked up and declared the brown-tail moth and its nests a nuisance and cause of sickness and the police have distributed notices to this effect. Owners are notified that they must cause the immediate destruction of all moths and nests found on their premises, otherwise legal steps will be taken to enforce the law. This is good news, and if current belief is correct it is due to the activity of a women's club.

City Forester William Doogue has collected over eighty barrels of brown-tail moth nests from the public trees of the city of Boston. Each barrel holds about 4,000 nests; each nest contains on an average 400 young caterpillars. This gives a total of 128,000,000 crawlers, each with a capacity to eat green things and an ability to inflict torture on humanity such as no words will fittingly describe.

The following poster has been distributed among the inhabitants of Watertown, Mass.—

Order of
BOARD OF HEALTH
to
Exterminate Brown Tail Moths on Private Property

By Authority of Sections 65 to 69, both inclusive of Chapter 75 of the Revised Laws the Board of Health of the Town of Watertown Do hereby adjudge the *Brown Tail Moth* to be a nuisance and cause of sickness and dangerous to the Public Health.

All owners or occupants upon whose premises the Moth or its Nests may be found are hereby *ordered to remove and destroy the same forthwith.*

Vivian Daniel, M. D., Chairman.
March 13th, 1905.

THE GYPSY MOTH IN PROVIDENCE

The Rhode Island College of Agriculture and Mechanic Arts issues the following:

Among the serious insect problems which the people of the State will have to face very soon is that of the Gypsy moth. There is a healthy colony of the insects in the western part of the city of Providence, and eggs enough have been laid in this section waiting for warm weather to hatch out to stock the whole State. Judging by the history of the insect in Massachusetts there is likely to be a rapid and steady increase of the insect unless measures are taken to check it. The sooner this check is applied the cheaper it will be. Two or three thousand dollars judiciously applied this spring will do more than $10,000 can accomplish if the work is deferred for a year or two. The history of the fight against the insect in Massachusetts should be a lesson to this State. The work was deferred too long, but by hard work and the appropriation of large sums of money the insect was brought under control. It was so nearly exterminated that the people thought it useless to make further appropriations to carry on the work. The fight had to be abandoned when victory was in sight, and the result is that the pest is as numerous as it ever was.

The insect lives over winter in the egg state. This is the point in its life history in which it is most cheaply destroyed. The application with a brush of a mixture of creosote and coal tar will destroy the eggs. As each cluster contains from 500 to 1,000 eggs, a little effort expended at this time will prevent the hatching out of a large number of caterpillars.

It would seem that this is an opportunity when the city and State should join hands for the common good. If the insect is permitted to spread it will be only a very short time before it will reach Roger Williams Park. The city must then expend a large amount of money in protecting the trees and shrubbery or else it must stand by and see the park ruined. The colony is a menace to the whole State, for while it is present it may at any time be distributed to other sections.

SALEM'S WAR UPON THE BROWNTAIL

At this time when the brown-tail moth has followed the gypsy moth with its fierce destructiveness, until the infested cities and towns have declared its presence a public nuisance, and by official action will compel the removal of nests by owners or tenants, it may be interesting to consider what has been accomplished by intelligent coöperation in the city of Salem, Mass., where the old-time gardens, the fine growth of young trees and the noteworthy elm, black walnut, maple and chestnut of luxuriant shade, the shrubbery, and even the market crops have been threatened with utter ruin.

Four years ago the *Salem News* offered prizes which enlisted the boys and girls in hunting down this pest, and the members of the women's clubs volunteered to count the deposits. These came in paper bags, containing a few scores or hundreds, in boxes of larger dimensions and big jute bags of a capacity of thousands. They were received at the shade-tree department house and, after the counting under the superintendence of a representative of the *Salem News*, they were gathered into barrels and burned.

When the result in 1902 showed the destruction of over 36,000 nests the satisfaction of the prize winners was scarcely less than that of those interested in forestry and horticulture, who realized that great damage had been averted. But to the sorrow of the Commonwealth, the prolific brown-tails demonstrated themselves alarmingly, and in 1903 more than 140,000 nests were destroyed in Salem, and in 1904 nearly 175,000 and still fresh nests showed upon shade and fruit trees, and in the wooded outskirts of the city.

The vigilance could not be relaxed and the youthful hunters began this season's collection while the snow was deep in gardens and fields. Thirty-eight depositors appeared at the opening of the contest, increasing daily, until nearly two hundred were enrolled. It was felt too much to again accept the volunteer work of the clubwomen, and two men were employed for counting, with additional help upon the last days that all nests might be destroyed before a possibility occurred of the caterpillars leaving the nests.

In the contest which closed March 25, over one million nests were destroyed; these were equal to one thousand bushels and one and one-half barrels of kerosene were used to assist in the cremation. The city employee who has so zealously and effectively performed this part of the work has become known along the North Shore as "Richard Davis, lord high executioner" and is believed to be responsible for the destruction of more souls of a bug nature than any other man in the world.

Stimulated by this public movement the citizens are carrying out the good work in their own premises, and it is believed the results will greatly lessen the destruction feared from the universal occupation of this pest.

In Peabody this work has been inaugurated by the Improvement Society, and in Beverly and Danvers the school children have been enlisted by the efforts of the club women. A. G. Cousins.

CLEVELAND TO BE FOREST CITY AGAIN

Arrangements for the Arbor Day celebrations to be held in Cleveland, O., under the auspices of the city forestry division of the park department, Friday April 21, were completed at the regular weekly meeting of the heads of the various divisions of the department last week.

There are to be six celebrations in as many different places. Gov. Myron T. Herrick, Mr. L. E. Holden, and other Cleveland men will preside over the exercises. Locations on these streets for the exercises will be selected contiguous to the schools, and the school authorities are to be asked to contribute to the success of a new plan, to popularize the retreeing of Cleveland. The celebration, aside from being an arbor day celebration, will include a practical demonstration of forestry work.

One hundred trees are to be planted on each street. The actual planting will be done under the supervision of Forester Harvath and his five tree wardens. The wardens are now undergoing a course of training by Mr. Harvath. The plan is to take the celebration of the day out of the idea of theory and demonstrate the excellent results that will follow a practical use of forestry knowledge, the aim being to popularize arbor day and make it one of the big annual events of the city and in this way secure a rejuvenation for Cleveland of the name of "Forest City."

A. L. Hutchins.

Two plants of Ampelopsis Veitchii were introduced to this country forty-five years ago. W. R. Smith was the first to distribute seed and it came from these plants. The form introduced in Boston was handsomer and less gross in habit. F. L. Harris propagated this variety from cuttings and these have never got that gourmand growth that has characterized the stock raised from seed. Mr. Smith attributes the popularity of this vine under the name of Boston ivy to the "daring audacity of Boston conceit aided and abetted by visitors to that city" who admired its beauty as there displayed on public and private buildings.

Outdoor Art and Craft

R. M. Bruce is having laid out a park at Indian Field, which when completed, he intends to present to the town of Greenwich, Conn.

Garden plots are to be laid out for the use of the scholars of the grammar schools in Waterbury, Conn., in the practical study of gardening.

James Carnes of West Brookfield, Mass., has been given the contract for the care of the station grounds on that section of the N. Y. Central Railroad.

Through the recommendations of Superintendent Wirth, the employees of the Hartford, Conn., Park Department have been given an increase of wages, amounting, in the aggregate, to $1,300 annually.

The Massachusetts Metropolitan Park Commission has asked for an appropriation of $150,000 with which to increase its holdings on Nantasket Beach and along the unrivalled cliff drive known as Jerusalem Road. Their request should be promptly granted.

Charles J. Brown, of the Brown Brothers' nursery firm, has offered to furnish Penfield, N. Y., with eleven miles of shade trees for the Dugway road, providing means can be found to set them out properly. The arrangements will be made at once to set the trees.

Chase Brothers & Company have purchased nine acres of land in Brighton, N. Y., for the extension of their nursery business. Two frost-proof packing and storage buildings will be erected, with a combined floor space of 40,000 sq. ft., also an office building 60×100. These structures are to cost $50,000.

Rhododendrons, in many localities where they ordinarily winter in good order, are showing the effects of the long-sustained cold and other characteristics of one of the severest winters ever experienced. Foliage is generally more or less hurt and occasionally large branches appear to be quite dead. Dryness at the roots undoubtedly helped complete the damage.

DESTROYING POISON IVY

"Frequent inquiries are made as to the best method of exterminating ivy. The problem of extermination is one which depends upon how much there is to be exterminated, and under what conditions the plant is growing. Where it covers rather extensive areas of grass land, the best method would consist in plowing up the soil and planting some cultivated crop until the ivy is eliminated.

"If, however, it is desired to exterminate it from a tree, building, or stone wall, as is more often the case, the most rational and practical method is by chemical treatment.

"There are various chemicals which can be employed to destroy plants, but the most efficacious are the compounds of arsenic. According to our experience, arsenate of soda is one of the most satisfactory compounds to use, as it is tolerably quick and permanent in its action. Three gallons of water containing eight ounces of arsenate of soda will suffice to kill a small ivy plant on a tree.

"A mixture containing one part of white arsenic and two parts of sal soda at the rate of eight ounces to three gallons of water, can be used with similar results. In both cases it is better to use hot water to dissolve the chemicals. If the ground is uneven around the ivy, it is best to dig a superficial trench, thus preventing the solution from spreading and killing the surrounding grass."—*From report of Mass. State Board of Agriculture.*

Michell's Superior Branching Asters

Our selected strain of **SEMPLE'S LATE ASTERS** is a money-maker. Seed saved from the finest and largest double flowers, solid colors, with long, stiff stems, which command top-notch prices. Try them with following colors: Lavender, Pink, Purple, Red, White and mixed, per trade packet, 30c; per oz., $1.00.

For select list of **FLOWER SEEDS, BULBS, SUPPLIES** and everything for the florist see our Wholesale List — mailed on request.

ON CAPE COD

The best example I ever saw of what can be done by an enthusiast with perseverance, under very unfavorable circumstances, is the estate of Mr. Rothwell at Cotuit on the shore of Cape Cod. When Mr. Rothwell purchased this estate a few years ago it was little more than a barren waste, but this can hardly be realized when the place is seen now, appearing as it does more as if situated a hundred miles inland than an artistically disguised sand-bank on the shore of Cape Cod.

In beginning the transformation Mr. Rothwell was obliged to cover nearly the entire surface with loam and manure, but the results show that, despite the enormous expense, it was money well spent. There now can be seen a great variety of trees, evergreen and deciduous, besides shrubberies and borders of herbaceous plants, none of which indicate anything foreign in their surroundings. The planting was done in such a manner that one group acted as a windbreak and nurse to the other, until now many things that would not be considered suitable for such an exposed situation thrive wonderfully.

Insect pests in their most aggravated form have to be combated and this is done by Mr. Rothwell's gardener with such success that their evil work is scarcely noticeable. Mr. Rothwell keeps in almost constant operation spraying appliances and equipment of the most approved pattern from early in spring until late in the summer.

On this estate when Mr. Rothwell bought it there were several large pools of fresh water; these by great ingenuity have been converted into ponds wherein have been placed several varieties of water lilies and along the edges trees and shrubs are planted with such good taste and discrimination that the whole forms one of the most charming features of an ideal summer home.

David McIntosh.

HOW TO PUT OUT FOREST FIRES

At a conference of Massachusetts town forest fire wardens held at the American House, Boston, recently, William P. Fox, superintendent of State forests in New York, gave an address on how to put out forest fires. Mr. Fox is the author of the New York forest fire law which is said to be the most effective one of its kind in the country. For twenty years he has had charge of the prevention of fires in that State. He told of the provisions of the law of his State, of the various causes of forest fires, and the methods resorted to to extinguish the flames.

The best time of day in which to contest the progress of an extensive fire is in the early morning or at nightfall. At evening, when the sun is down and the wind has ceased, their progress can be controlled. The cool night air and falling dew deaden the flames and lessen the mass of drifting smoke. For this reason, he said, we now keep our men on the ground both night and day.

NEWS NOTES

Mr. Jno. Bertermann of Indianapolis, has left for two months trip to Europe.

Sidney Smith has returned to Indianapolis from Texas, much improved in health.

George Fellouris was arrested in Stockbridge, Mass., on April 13, and fined $20 and costs, under the law prohibiting metropolitan fern pickers from invading the Berkshires. Four hundred pounds of ferns were confiscated.

Mr. Cowell, at the Buffalo Botanic Garden, is busy getting his new plants from the Republic of Panama into shape. His recent visit to the Isthmus resulted in the collection of over five hundred species. Among other good things brought home, are two two new palms, two new Carludovicas, several orchids, some fine spathophyllums, alocasias, philodendrons and anthuriums, some beautiful bignoniaceous climbers, and many rare things peculiar to the country. He had a new experience in collecting "El Spirito Sancto," and found considerable excitement while exploring some of the colder portions of the country. According to his statements, he found the fauna fully as novel as the flora. He is as brown as a berry and improved in health by his trip.

A NEWPORT FORECAST

What kind of a season are we going to have? How often this question is asked, but the answer is a matter of so much importance and consequence to Newport and its inhabitants that there is little wonder it is being asked so often, and to those in no other line of business is the answer of more moment than to the growers of plants, fruits, and flowers, not only of Newport itself but to the big growers outside also, who in a measure contribute to the supply. A poor Newport season means to these growers and dealers poor business and a consequent hard pulling to make ends meet, whereas on the other hand a good season makes much business for everybody and for the florist in particular. If all signs fail not the coming summer will be classed a good one, and cupid, who is one of Newport's best friends, is already busy in behalf of the old town.

CUT-FLOWER MARKET REPORTS

BOSTON The state of the market is one of expectancy. By the time this reaches our patrons they will know more about it than we now do and, moreover, they will, we trust, be much too busy to read market reports. So we desist and shall restrain our pen until next week's issue when we hope to be able to tell everything of genuine interest concerning the Easter business.

CHICAGO Conditions have improved somewhat since last report, occasioned by a slight contraction in receipts. American Beauties continue in heavy supply and quality is excellent. Teas have been fully equal to the call, and everything of good quality easily disposed of. Strength in carnations surprised the commission men this week. Demand from all round brought about a clean-up of the supply early each day, values advancing slightly. Returns averaged best on colored sorts. Immense receipts of southern outdoor bulb stock gives to the market a downward impetus, however, fancy double tulips at 4 to 5 cents are in strong request, but offered only sparingly. Lilies are abundant, and callas a glut. Arbutus again disputes with violets. A good active market exists for orchids. Green goods are equal to any demand.

LOUISVILLE Business favorable; stock generally in demand. Carnations in short supply, also roses to some extent. Plants in fair demand and the supply offered is of good quality.

NEW YORK Cold weather has cut off the supply sufficiently to second the influence of approaching Easter in stiffening prices. Beauties are in larger proportionate supply than other roses and there is a good supply of Jacq's and Brunners. Violets now have the distinction of being the scarcest article in the market and prices have climbed accordingly. General trade rather quiet at opening of Easter week. The outlook is entirely dependent on the weather we shall get.

PHILADELPHIA Things brightened up very much towards end of week and to-day, Monday, a decided rush is on with prices jumping. The buyers are stabbed to the heart, but they are coming around with less mortality than might have been expected The cool weather has been a great blessing both for the cut flower grower and the plant man. Beauties are of excellent quality and prices good. The same may be said of other roses although Brides and 'Maids are not quite as good as they might be. The carnation market is now in better shape with quality very good. Plant market in fine condition, most of the growers being sold out a week ahead. Azaleas scarce, but plenty of hydrangeas spiræas, and other stock, and there will be little left on Saturday night. On the whole, a good Easter here is certain.

PITTSBURG The week preceding Easter, notoriously the dullest of the season, did not change its reputation this year. It has been a raging battle since Saturday between spring and winter for supremacy and winter won out with an abundance of snow and frost. On Sunday morning the thermometer went down to 27, but so far as I can learn at this writing, vegetation and fruit trees are not materially injured as they were not far enough advanced. The conditions have been wholly unsuited to out door selling, and on few occasions have the market men been able to display their flowers. The usual shrinkage of shipments is also visible, but this is to be expected, and as soon as Easter prices prevail the deficiency will be more than made up.

A good opportunity to secure bargains in orchids and other choice greenhouse stock is offered in the auction sale of Sander & Sons, St. Albans, Eng., which takes place at Cleary's Horticultural Hall, 62 Vesey Street, New York, on Tuesday, April 25.

GREENHOUSE HEATING

One of the problems confronting every greenhouse man is that of his heating plant, and it is a feature of the greenhouse that runs into money most rapidly. The piping system is of first importance. One of the best things that can be used for this purpose is ordinary boiler tubes, costing about one-half as much as 4-inch standard cast-iron soil pipe, or 4-inch wrought-iron pipe. They can be connected together with a coupling of a larger diameter of wrought pipe, about 6 inches long, using oakum, and either an iron-filing cement or Portland cement to fill up the space between the pipe completely. These wrought iron couplings are a very great convenience. They are not liable to split open on account of being packed tightly as would a cast-iron hub, and they can be made by any one from a piece of pipe or casing a size larger than the tube itself, cut off with an ordinary

pipe cutter. Six inches long is a good length, but they can be made longer. The boiler tubes themselves can be cut with the same cutter, and this makes it very easy for any one to work this kind of pipe.

The illustration printed herewith shows how the joint should be made. In using pipe of this kind in connection with cast-iron greenhouse fittings, with hubs for caulked joints, the right number of lines of pipe can be arranged under your benches, all to take their supply from the main feed pipe. The pipe lines can be arranged with butterfly valves, which can be furnished with hub ends to have the pipe caulked solidly into them. By using these valves, you can shut off one or more of your pipe lines in weather when you do not need the entire system.

Greenhouse heating systems put in with this kind of pipe and fittings have many advantages over the smaller size pipe. To begin with, the large volume of water held in the pipe is a safe-guard against the house becoming chilled with a sudden drop of the thermometer. Another convenience is that in each lineal foot of this pipe there is a square foot of radiation. These boiler tubes are very much lighter and more easily handled than 4-inch cast-iron pipe, and they come in longer lengths, so that there is not nearly the amount of caulking to be done with them as there is with the cast-iron pipe.

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT-BED SASH — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ⅜- up to 42-inch. We can furnish you pipe of any kind. Write for complete list

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

TWEMLOW'S
Old English Glazing Putty,
SEMI-LIQUID,

For bedding glass in sash or for filling cracks or seams in roof joints or frames

OF GREENHOUSES OR HOT BEDS.

THIS **PUTTY** Is used in Machine or Bulb.

If too thick for bulb thin with a little Pure Linseed Oil, boiled.

So thinned it can be brushed into any crack or leak, making a solid filling.

THIS **PUTTY** makes a solid bed, impervious to moisture, and holds glass in its place, and will stop any crevice or fault.

When once set on dry wood it does not heave.

Horticultural Architects and Builders
West Side Ave., JERSEY CITY, N. J.

We manufacture and erect every type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot-bed sash and frames. Special hand-made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

Exterior view of "U" Bar greenhouse designed and erected for Mrs. A. A. Anderson, Greenwich, Ct.

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON. This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE. The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI. Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON. We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Decorative Art

A very common mistake among people who arrange flowers is that proper thought is not given to the selection of a vase or receptacle adapted to the flowers, i.e., tall vases for short-stemmed flowers, and shallow vases for long-stemmed ones are often used, with the result that the flowers are not nearly so effective, and the long-stemmed flowers put in shallow vases fade quickly which is very apt to cause complaint by patrons.

H. H. Battle.

British Horticulture

A Daffodil Display

There was a fine show of daffodils at the fortnightly meeting of the Royal Horticultural Society at Westminster, March 28. Among the chief exhibitors in this branch were Messrs. Barr and Sons, of King street, Covent Garden. Mr. Peter Barr, the veteran head of the firm, is known as the "Daffodil King," for his sterling services in popularizing this spring bloom. He has traveled in all parts of the world, and after a voyage around the globe he set out for a tour in the Holy Land. The business is now carried on by the three sons, who are continuing the work of cross-fertilization at their extensive nurseries at Ditton Hill, Surbiton. In the display under notice an award of merit was granted to Ariadne, a well-developed bloom, with white perianth, ivory-white cup, nicely frilled at margin. Awards of merit have already been secured at Birmingham, Truro, and Plymouth. The other exhibits included Peter Barr, the premier white trumpet daffodil; King Alfred, a yellow trumpet, with bold and shapely blooms; White Lady, with a broad white perianth, and a canary-tinted cup; Lord Roberts (yellow trumpet) with golden-yellow blooms of splendid size, standing out with prominence.

A Dean Hole Memorial

The late Dean Hole, President of the National Rose Society, made many friends during his lecturing tour in America, and returned with a high opinion of his fellow horticulturists in the States. He has placed on record in his book of travels the important part horticulture takes in creating a cordial feeling and *esprit de corps* among gardeners all over the world. At any rate the Dean had pleasant experiences of this comradeship which made him a welcome visitor to America. It will be interesting to American horticulturists to learn that a movement is on foot on this side to raise a fund for providing a memorial to this distinguished cleric and rosarian. The preliminaries have already been discussed, and a further meeting is to be held in April. This is as it should be. With the numerous admirers of Dean Hole, and appreciations of the valuable service he rendered to horticulture in general and rose-culture

in particular, there should be no difficulty in raising a substantial sum. It is to be hoped that American horticulturists will take some part in this estimable project. A suggestion has been made that the memorial shall take the form of the foundation of a scholarship on the advancement of some special branch of horticulture, and this appears to be an appropriate method of recognizing the memorable life of a noble man.

A Cucumber Pest

The many growers of cucumbers for market have in the past suffered heavy losses by the ravages of the spot disease (Cercospora Melonis). Some interest has been aroused in the announcement that Mr. H. D. Ladds, a Swanley nurseryman, has discovered a remedy. He expresses his readiness to disclose the secret for £1,000. Several of the growers have great faith in the discovery, and it has been decided to raise a fund with a view to making the purchase, and putting the remedy into practice. Mr. Ladd, at a recent meeting of growers, stated that the remedy had proved effective in his own houses and those of his brothers. He also expressed the opinion that a grower could dress 1,000 ft. row of glass in ten minutes at an expense of 6d. As to the remedy being innocuous, the following opinion was received from a salesman.: "With reference to Mr. H. D. Ladds' cucumbers of last season, I can only say that throughout that time they never showed any trace of disease, nor were they disfigured by any treatment, nor was their appearance in any way spoiled for market." A committee has been appointed to investigate the matter, and if the £1,000 is raised they will pay the money to Mr. Ladd, provided they are satisfied with his discovery.

Where are the Novelties

This is the period when one becomes bombarded with all kinds of catalogues from seedsmen and nurserymen. There are not many novelties which will attract much notice. The most is being made of Nicotiana Sanderæ. One London firm having large stores are selling packets at 9d. so that it has been brought within the reach of everyone, and is likely to be largely grown. A "white wall-flower" "White Queen" is included in some lists, but its title is a misnomer, the tint being pale yellow, fading to white. There is one point which often evokes criticism and that is the needless addition to the varieties of kinds which are synonymous to old sorts. This duplication and rechristening often causes confusion. The tendency of the trade appears to be to make a big show, but they would study the interest of their clients were they to reduce the number of varieties and avoid any bewilderingly synonymous kinds. Some of the lists over-awe their readers by the mass of unindexed information. The trade will find it advantageous to simplify their methods in this direction.

W. H. Adsett.

London, England, Mar. 29, 1905.

Some Greenhouse Pests

III

Mealy Bug

Very common pests in all greenhouses are the mealy bugs, of which there are several species, but as the habits of all are practically the same there is no need for the florist to distinguish them. The mealy bugs resemble the scale insects to a certain extent but are capable of moving around. When mature the females are covered with a white waxy substance — which gives them their name — secreted from the pores of the body. They also have a fringe of about seventeen spines. These females are wingless and do not move around any to speak of. The males, on the other hand, are provided with a pair of white wings, and also have two long appendages on the abdomen.

The female lays her eggs, 300–600, during her lifetime, starting when only two-thirds grown. They are deposited under the tip of the abdomen and in some cases covered with a flocculent waxy substance. When the mass of eggs is very large the female may be detached entirely from the leaf, except her head, upon which she seems to be standing. The eggs hatch in a few days and the young run actively about until they find a suitable place to settle. They then secret the waxy coating, and if females, remain there until they die, but if males they moult, appearing later as winged adults.

Treatment. Spray with a strong jet of water every few days. Alcohol and ether will dissolve the waxy covering. Oil and soap washes are good. Linseed oil can be used on hardy plants. All must be repeated often.

White Fly

The family Aleurodidæ contains many members, most of which are harmless, but the greenhouse Aleyrodes, or White Fly, is an exception to the rule. These are tiny, gnat-like insects with two pairs of wings covered with a white powder. The larvæ resemble scale insects being broad, flat, and oval, with a waxy coating.

The males and females are much alike, being provided with a beak with which they suck the sap of plants. The females lay about twenty-five eggs, the egg-laying period lasting ten or twelve days. The young mature in two months and lay the eggs for a second brood. Because of the lack of mortality and the frequency of reproduction they multiply rapidly.

They live on tomatoes, cucumbers, pelargoniums, salvias, fuchsias, and on other greenhouse plants, as well as on citrus trees. I have found them on Primula obconica.

Treatment. This consists of kerosene and resin washes, hitting the under sides of the leaves particularly, the HCN fumigation.

In conclusion, it is not within the scope of these articles to mention all insects injurious to florist crops but only a few of the very worst ones. Growers are imposed upon by a large number of special insects which do more or less damage, sometimes locally. Attention might be drawn to the Termites or white ants, often found in old greenhouses, the Hemispherical scale (Lecanium hemisphaerium) on citrus plants, and a host of others. If you find an insect that is doing considerable damage and you do not know what it is, send it to your experiment station and have them determine it for you and tell you the remedy. That is one of the objects of their existence.

R. J. Adams.

Architect and Landscape-Artist

It must be freely conceded that our American home-makers have learned a great deal during the last twenty years, and that their taste in house-building and landscape-gardening has been vastly improved. This change for the better was unquestionably brought about through the strenuous efforts and artistic sensibility of the popular periodicals, which waged a skillful and persistent war with the then prevalent absurdities of home-making, that offended every sense of beauty and order. The mushroom cottages, all of one pattern and one style, have given way to more ornate motives and more diversified models in cottage- and house-building and the sterile lawns of yore, dotted here and there with a few lilac-bushes and bunches of fleur-de-lis, have been converted into a semblance of something what they ought to be, but with a great expense of labor and money. Still, much has to be done yet to bring the house, as planned by the architect, and the surrounding grounds, as laid out by the landscape-artist, into a harmony that will insure the best effects and greatest convenience.

There are but few persons engaged in building a home that pay the least attention to the art of landscape-gardening around their homes at the proper time. They generally make some futile attempts when the building is done and when it is too late to obtain good effects.

The truth, is, that there is but one way to do this, and that is to start in the right way and at the proper time. It is useless to leave this kind of work to the discretion of a contractor or carpenter, or even the architect and have him draft your plans before you have obtained the advice of a capable landscape-artist, as to the site, where you are going to locate your house, and as to the effectual possibilities afforded by the plot that is to surround it. For the laying out of grounds and their artistic arrangement is not the province of an architect. But what is a home without lawns, flowers, shrubs, and trees, giving grace and pleasure without stint? How desirable are shrubs or ornamental trees with their fresh green foliage in the spring, with their refreshing shade in summer time.

Yet, many noble trees beautifying a lot or an estate could have been saved and made useful, which the vandal hand of thoughtless man rudely cut down. Many instances are on record, and not a few have come under the observation of the writer, where fine clusters of trees were dropped to the ground and a healthy growth of fifty and more years was destroyed and the logs rolled up in heaps to be burned, for no other purpose than to make room for the builders. After the harm was done and the grading of the grounds accomplished, young, feeble trees were set out and nursed with great care in place of the former beauties, which could have been preserved from destruction with a little forethought at the beginning of the building.

The architect has generally no thought of, nor an eye for landscape effects on the home grounds. He has but one point in view and this is, to have every line of his drawing stand out as attractive as possible, and he often uses impracticable as well as impossible effects for front and back grounds, which are liable to deceive the man for whom he is drawing the plans for a home. Thus is the architect enabled to make an elaborate plan with elevations and side views, which will never be fully carried out, but which is accepted by the builder under the high colored and misguiding lines of a prospective, that fills him in the end with dissatisfaction and disappointment. If the architect would but think for a moment of the possible landscape effects, he would at once notice his mistakes and see where he is at fault in his plans. He would not hesitate to take the landscape-artist into his confidence and say: "We must work together that we may secure the best and most desirable effects for our client, the builder." Then the landscape-artist would never be called upon to cover up defects and mistakes of an architect's plans which could have easily been avoided or corrected, had he but first taken counsel and viewed the location through the eyes of a landscape-gardener before he started drafting the model of the building.

What does the architect do first in projecting a building? Does he not properly commence with drawing the ground plan? Then he will work out the elevations and details. Why then not have a plan of the whole lot or plat drawn first as a ground plan? Why not find out and know what you are about to have? Locate the site for building purposes, lay out your lawns, drives, and walks, put in your clumps of shrubs and place your ornamental trees where they will show to their best advantage with the same aim and the same purpose with which the architect proceeds with his plans and decorations.

This, methinks, would be therefore the better way and the right way to set about building a home. First consider the natural advantages of the place, then let the professional artist point out to you the opportunities and possibilities which the location offers, let him utilize trees of vigorous growth found there and finally after having mapped out the whole of the landscape beforehand let the architect see with what effects he has to deal and how his plans may be improved.

Since brilliancy of color, truthful imitation of nature and novelty of decorative material form the favorite source of pleasure now-a-days, it is the landscape-artist who calls for his modicum of recognition and who is capable to satisfy a critical public with his work, for landscape affords the widest range of color and picturesque effect. Yet the best effects are not produced by chance efforts; but they have to be studied in ensemble and detail and it is the work of the artist, so to arrange, blend, and combine color and design, that the architectural lines of a building appear like the picture of a master in a worthy frame.

Let us hope, therefore, that architecture will make a compromise with landscape-gardening and the narrowness which seems to exist in some places, will give way to a broader mutual understanding and a disinterested coöperation.

H. L. Simmons.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The suggestion which one of our contributors makes — that the architect should consult the landscape-artist in selecting the situation for the buildings on an estate — has much to commend it. Unfortunately, the architect rarely takes this view of the subject.

Washington enjoys a milder winter and earlier spring than that which many of us are accustomed to, but occasionally has to submit to a very unseasonable visit from Old Boreas. Our illustration shows better than words can describe what happened on March 4, 1901, President McKinley's second inauguration day, and should help to influence popular support for the movement to change the date of the presidential inauguration from March 4 to April 30, when such a calamity, with its resultant deaths from exposure, would be out of the possibilities.

To the universal proneness to extol bygones may be attributed much of the prevalent idea that varieties of florists' flowers deteriorate under continued greenhouse propagation and culture. In the mind's eye the Bonsilene, Safrano, and Marèchal Neil roses of the olden time, the Grace Wilder, Anna Webb, and Hinze's White carnations, and even the Scotts and McGowans of later days loom up in quite different proportions from what they would had there been any modern American Beauties, Bridesmaids, Lawsons, Lady Bountiful, and Roosevelts, with which to compare them, or if it were possible to reproduce them other than in the tables of memory. Where deterioration can be proven, however, its cause will usually be found in unwise cultural methods.

The efforts being made by the School Garden Committee of the Massachusetts Horticultural Society to promote the establishment of children's gardens and encourage the improvement of school grounds throughout the State are in the right line and will undoubtedly meet with a quick and cordial response from teachers, parents, and best of all, from the children themselves. A passionate love for such things and such employment is inborn in every normally constituted child and, once introduced, the innovation may reasonably be expected to do its own promoting. We shall not be surprised if within a very short time every community in the State and many more outside the State will have wheeled into line on this question, and largely through the demand of the children themselves. As to the good influence of such training, on the home life and home surroundings and for the uplifting of the entire community a generation hence, it cannot be overestimated.

WHY WEEDS ARE WEEDS

Weed.—The general name of any plant that is useless or troublesome. — *Webster.*

Weed.—The name given to all those plants which grow wild in cultivated grounds and injure the crops; which they do by choking them or exhausting the soil. — *Chambers's Miscellany.*

Every plant which grows in a field other than that of which the seed has been sown by the husbandman is a weed. — *Penny Cyclopædia.*

And so we might go on citing authorities, and our own understanding that any plant which persists in growing where you want not it but something else, be it handsome or ugly, indigenous or exotic, is a weed — seems to be unanimously indorsed. Again, we have been always under the impression that a "weed" is usually well able to take care of itself and jostle its more favored neighbors out of their lives if not taken in hand. We have always envied our old acquaintance the purslane, which can neither be choked, trampled or electrocuted out of existence, and delights in being chopped up and greeting you with its numerous progeny a couple of days afterward. What would we not give to acquire such a constitution? As long as four hundred years ago Harleian wrote "Evyl weed ys sone y-growe," and it is nearly as long since George Chapman remarked that "An ill weed grows apace." Probably the fact thus quaintly recorded had been a matter of common understanding for many a hundred years before.

But now we find all our well-defined ideas on this subject completely overturned by no less a person than our world-renowned countryman Luther Burbank. Among the avalanché of slush written and circulated about the Wizard of Horticulture, we find the following quotation attributed to that gentleman:

"Weeds are weeds because they are jostled, crowded, cropped, trampled on, scorched by fierce heat, starved, or perhaps suffering with cold, wet feet, are tormented by insect pests, or lack of nourishing food or sunshine. There is not a weed alive which will not, sooner or later, respond liberally to good cultivation and persistent selection. A day will come when the earth will be transformed, when man shall offer his brother man not bullets nor bayonets, but richer grains, better fruits, fairer flowers." — *Luther Burbank.*

That's what happens to the best of men when the sensational paragrapher gets his clutches on him. We read elsewhere that Mr. Burbank has concluded to charge interviewers ten dollars an hour hereafter. A step in the right direction, but it doesn't go far enough. Ten dollars a minute would be about right for some of the more rapid ones.

After Adjournment

When one considers the labor and the risk involved in lily culture 25 cents a blossom, which is the price charged by the local florists, is startlingly cheap. * * *

Nothing is considered quite so appropriate an Easter offering as a symbol of gladness as are cut flowers, either in loose bouquets, tied corsage bouquets or arranged with artistic carelessness in boxes or baskets. — *Albany Journal.*

Cheaper than they were last Easter and very plentiful, is what the florists all say when you ask them what the outlook is for Easter flowers. The news is good news to thousands, for the Easter plant or bunch of flowers is richer in sentiment than any other floral tribute known to the horticulturist, except, perhaps, the bridal bouquet. It suggests not only the religious sentiments that cluster about the 'queen' festival of the ecclesiastical year, but it typifies the birth of spring in nature, and the opening of the spring season in the world of society and dress. — *New York Tribune.*

That's the right kind of talk. Worth more to the people in general and the florist in particular than whole volumes of scareheads about the scarcity and high prices of flowers, the substitution of live chicks for flowers and other "bug house" fads that generally find currency, and for which the florist is usually as much to blame as the reporter.

"No violets for Easter!"

This dictum emanates from a 5th avenue florist. It will bring sadness to many a feminine breast, for the violet is loved as roses are loved, and for street wear they are unexcelled.

It is not that violets will not be fashionable for Easter. Violets are always fashionable. But Easter comes so late this year, and the floral season is so advanced in consequence, that violets are passé. They have bloomed their bloom, blossomed themselves out, and must by the laws of nature give place to others.

"What shall we wear, then?" asks my lady of fashion.

"Oh, gardenias or orchids, particularly the lavender orchids," the florist will tell her. — *N. Y. Tribune.*

Ah! there's where the innate badness crops out. Did the author of this misinformation have a grudge against the violet and take this means for revenge?

"Quoth Hudibras, 'I smell a rat!
Ralpho, thou dost prevaricate.'"

Among the complaints regarding market values heard this season in America, the Lawson Carnation figures prominently, disappointment being freely expressed by growers because this flower did not reach the prices of former years. The cause of the decline, HORTICULTURE states, is undoubtedly due to the growers themselves more than to any other agency. Growers are too often influenced by current prices in planning for their next year's crop and plant heavily of that variety which is the most profitable for the time being, overlooking the certainty that other growers will think and do precisely the same thing, with the result that, as has been the case with Lawson, the quantity of one variety is away out of proportion to the necessities of the market, and the inevitable follows. This is a mistake not confined to the United States growers; similar instances occur on this side, to the loss and annoyance of those who are too ready to follow other people's lead. — *Market Growers' Gazette, London, Eng.*

Personal

Mr. Pettfield has been retained as gardener for Mr. Long who recently purchased the Col. Charles Pfaff estate in South Framingham.

Arthur Abraham, formerly gardener for Philip Moen of Shrewsbury, has succeeded Mr. Adams as gardener in the E. D. Jordan estate, Brookline.

John Berry, one of the best landscape-gardeners and florists in the West, has accepted a position in Colorado Springs as superintendent of Monument Park. Mr. Berry has been with the Park Floral Co., of Denver, for several years and the best wishes of the craft in Denver accompany him in his new vocation.

Arthur Griffin, gardener for Com. Elbridge T. Gerry had a display of plants and flowers for Easter, the like of which never was seen in Newport. Easter being so late this year gave Mr. Griffin an opportunity to grow lilies and other bulbous flowers under conditions so nearly akin to their natural requirements that the results were plants and flowers of unusual perfection and development. Mr. and Mrs. Gerry's custom of making many presents of plants and flowers to friends, besides sending quantities to hospitals in New York, necessitates the growing of a larger stock on this place than on any other private estate in this section.

SOME CINCINNATI WRINKLES

Walter J. Gray & Sons, Cincinnati, had a very large crop of short Beauties for Easter. This was brought about by keeping the plants at a very low temperature all winter, and then forcing them into bloom.

Some of the growers about Cincinnati used cloth stretched over supports which were attached to each end of the benches and long strips nailed to the tops of these forming a sort of a crate, the supports being high enough to extend over the tops of the blooming lilies. When the sun's rays were too hot they would stretch sheets of cloth over these, and in this manner were able to hold back more stock than there would have been otherwise.

WHAT THEY SAY OF US

You will please send us your valuable paper, the best we ever read; spicy and up to date relating to all subjects pertaining to Horticulutre. — S. O. N.

THE SPELL OF SPRING

Be it born of sweetness,
Be it born of light,
Of fragile incompleteness,
Child of morn or night —
Be it reft of all that's fair, its nameless charm to me
Lies in the promise that it holds of lovelier things to be.

I feel it in the fragrance
That comes before the flowers,
In the breeze's vagrance
Through the dreamful hours;
And oftentimes it wooes me, and sets my pulse a-thrill,
When first I catch with happy heart the bluebird's herald trill.

The little clouds whose whiteness
But makes the skies more blue —
Unto their tender brightness
It lends a softer hue.
Yes, earthward, skyward, seaward, no words can ever sing
The mystic, indefinable, the wondrous spell of Spring.

— *Samuel Minturn Peck, in the Boston Transcript.*

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

The Music Hall Market growers have a meeting for the organization of their ball team on Saturday, April 29, and a series of bowling matches is also a possibility next winter.

Plans are being completed for an excursion in June of the growers and their families to some shore resort, Nantasket seemingly having the preference. Every grower in either market owes it to himself and the prestige of the Boston florists to put his shoulder to the wheel and make this picnic an assured success. This summer all will have an opportunity to support several enterprises calculated to promote a condition of greater sociability between all the craft.

Reports from the Cape point to a record-breaking crop of Mayflowers this spring. To the New Englander no spring flower is so welcome. Recollections of the Mayflower parties of his youth are always vivid in his memory, and he can anticipate no greater pleasure than a day's outing in the woods in quest of these harbingers of spring. As I write, information comes to me concerning the loss by forest fire of many plants and flowers in the town of Barnstable. But the loss by forest fires is trifling when compared with the marauding Italians who root them up ruthlessly. Many towns have passed laws against this practice, but the territory to be covered makes control difficult.

T. F. MATTHEWS.

WHOLESOME CHESTNUTS

Grape vines need constant attention. Proper ventilation is the surest preventive of aërial roots which are now a recognized evil for the reason that when the fruit is ripening and little or no moisture in the house these roots get suddenly checked, with a corresponding and more serious check to the vines in consequence. Pinch or stop the fruiting wood at the second or at least the third joint from the bunch, stop all laterals at the first joint, select your bunch for each shoot and cut the rest off except Muscats; these set evener if left until fruit is set.

Disbud young shoots of peaches and nectarines and if in a fit stage tie in all you want for next year. When you water, do it thoroughly; there is nothing worse than an eternal sprinkling.

Make a calculation of how many bedding plants of each species and variety you need; this may save you needless trouble when bedding time comes.

Plant out hollyhocks, pansies, marguerite carnations and antirrhinums.

Keep your gardenias growing; the better the growth now, the longer will be the flower stems.

Give gooseberry and currant bushes a good dusting with helebore; there is nothing better for the bushes and nothing worse for the caterpillars.

Sow medium early peas, and as a precaution put in a row or two more sweet peas; we don't know what may happen.

A BANQUET HALL DECORATION

The beautiful picture which adorns our title page this week is reproduced from a photograph of a spring decoration done last year, by J. H. Small & Sons, for Clarence Mackey in the Postal Telegraph building in New York. The occasion was a reception given by Mr. Mackey to his agents from all over the world. The symbolism of the globes is obvious, and the flowers — apple blossoms on the walls, and sweet peas on the table — speak for themselves.

Is Floriculture More Advanced In This Country Than In Europe?

James T. Scott, at meeting of N. Y. Florists' Club.

The question is a somewhat knotty one. No matter how well disposed one may feel toward the land of his adoption there is that something voiced in the words of Sir Walter Scott

"Breathes there a man with soul so dead,
Who never to himself has said,
This is my own, my native land."

An opinion thus given is liable, therefore, to be biased in a degree, no matter how honestly we may endeavor to place the question. If we should confine ourselves solely to commercial floriculture, the answer would be a negative one. There is no country in the universe where flowers are grown (especially in the winter months) for the millions to such perfection as they are here, but the range of variety is in a great measure restricted. If we eliminate the rose, carnation, and violet, there would be little left, indeed, and looked at from the broadest standpoint these three items could scarcely be said to cover the field of floriculture. Financially, this country is able to support these luxuries better than they are supported in Europe. The working classes over there find it a hard enough struggle to make money enough to keep body and soul together, without any of these added luxuries. Even if they had the money it would be impossible to supply these grades of flowers at the same cost. The winters over there are cold and dull with scarcely any sunshine, and during the summer it is necessary to keep firing constantly. Under these conditions, it is impossible to produce the same grade of flowers at the same cost as we do here. The wealthy classes over there mostly rely on their own greenhouses for all their flower supplies, and the commercial florist, as we know him, is scarcely known on the other side at all. Covent Garden is largely a plant market, although during the early spring months lots of bulbous stock finds its way there from the Scilly and Channel Islands, and from the south of France. The modest flower girl is found on the London streets in spring and summer, but there is not enough money in the operation to entice the Greek, and the millionaire commission man can only be fattened in such a broad and wealthy country as America.

To every European, the cultivation of roses, carnations, and violets, as done in this country is quite a revelation, but here it ends, and floriculture in its broader sense seems to be largely sacrificed for this. Moreover, the tendency is to run to specialties, most times to carnations or roses alone, or vice versa, and the floricultural training of the young man in the business is, therefore, but superficial. No doubt he may be able to make just as good a living as if his knowledge were broader, but from a floricultural standpoint, his training has never been finished. There are, of course, many exceptions to this as there are in anything, but those who have surmounted the barrier have done so from energy and strength of character, in spite of the system, rather than because of it.

There are a few private places in this country where floriculture is just as far advanced as it is in Europe, instances at Gould's, Rockefeller's, Untermyer's, Borden's, Ogden Mills', Dinsmore's, D. Willis James', J. Crosby Brown's, F. L. and Oakes Ames estates, Percival Roberts', Wanamaker's, several estates in Lenox and Newport; but the majority of private places here are run too much on a semi-commercial basis, for what can be got out of them, and everything is figured down to dollars and cents. Merely a place where the floral essentials necessary for society events are produced more conveniently and cheaper perhaps, than they can be procured in the open market; or because a whim of fancy, or society dictates, demand that all up-to-date people must have these things to be in the height of fashion; just as the up-to-date spirits demand that the wealthy must own fast horses or an expensive automobile. They largely own these things from a spirit of caprice, to excel and outdo others less fortunate in the possession of the world's goods. A big bunch of flowers appeals to any nature however primitive, but how few of even those who own greenhouses will take up one small flower in their hand and admire it for the sake of the flower itself? In the language of the poet·

"A primrose by the river's brim,
A yellow primrose is to him
And nothing more."

How few appreciate the spirit of the poet Burns as he was about to turn under with the plough-shear a modest daisy, the first harbinger of spring:

"Wee, modest, crimson tipped flower
Thou's met me in an evil hour,
For I maun crush amang the stoure thy tender stem
To spare thee now is past my power, thou bonnie gem."

If we were to leave out the men who are directly interested in floriculture here for a livlihood, and the wealthy whose case has already been dealt with, what would be left? The poorer, everyday, working people have no love for rural beauty, and the flowers that clothe the roadways have not for them even a passing interest. How different from the old-world homes where every cottage has its garden; where the roses and the honeysuckle mingle with the morning-glories against the whitewashed walls of the humble dwellings; where the pathway that leads to the door has a border of flowers on every side; the edging may be of boxwood or oftener of the common saxifraga (or London Pride) or double daisies, or sometimes armerias (sea pink) Cerastium tomentosum (snow in summer). In the border behind the snowdrop appears before the snow has left the ground, followed in quick succession by crocus, daffodils, aubretias, grape hyacinths, primroses, iris, polyanthus, wallflowers, adonis, campanulas, veronicas, starworts, woodruff, pyrethrums, lupines, delphiniums, monkshood, ranunculus, anemones, phloxes, peonies, pansies, violets, trilliums, potentillas, and other things far too numerous to enumerate. In these small garden spots, they contrive to have things in bloom from early spring until late in the fall when the Christmas roses have to be protected from the keen biting winds with spruce branches. Flowers to these humble old-world cottagers are a source of everyday delight, few plants are bought or sold; their incomes deny this. But a spirit of good fellowship largely enhanced by mutual tastes enables them to barter backward and forward, and newer things thus find their way gradually into every garden. The children are reared in this atmosphere; they learn the names of the various flowers as they come and go; as other children become familiar with the names of the various household articles. As a boy, I could name every flower that grew in my father's garden, as well as every tree which grew in the district, and I was no exception to the others. When the day's work is over men turn to their gardens for recreation; often also, from necessity, for all grow their own vegetables, which otherwise they would have to go without, their income being insufficient to spend on needed staples. In every cottage window is to be found a wealth of bloom; it may be of ger-

Fountain in Botanic Garden, Washington, March 4, 1901

See Editorial Page

aniums, pelargoniums, or fuchsias only, but always enough to make the home look cheerful and bright. Every little country village has its annual flower show, and the keenness of competiton surpasses, in its own small way, a Madison Square exhibition. The beauty of it is, that all are competent judges and the minutest details are keenly scrutinized.

The love of flowers, and the love of the beautiful in nature, appeals not to those whose thoughts are sordid, whose one desire is to make money or to shine before the glaring footlights of a superficial society.

This is a comparatively new country, and men have been busy up till now developing it. Liberty-loving subjects of all nations have flocked to these United States, where aristocratic rule is unknown, and where one man is as good as another. Again the spirit of Burns prevails: "A man's a man for a' that" but our work is just beginning. Ours is a missionary calling. There is here a fresh field for labor. There is here the material to work upon. There is here the wherewithal to work with; and if the work remain unfinished it will be largely our fault.

Is floriculture in this country as far advanced as it is in Europe? No; not yet

DETERIORATION OF VON SION NARCISSUS

To the Editor of Horticulture

Dear Sir: — I would like to ask for a little information which will be appreciated.

I have some double Von Sion daffodils in the open ground. The first year they bloomed in good form and color, but the past two years they have done nothing. Last year blooms were poor and of a greenish cast; this year they seemed to be all "bull nosed," that is did not open and dried on the stalk. What is the matter with them, or are they no good after the first year. Any suggestions will be appreciated.

Yours truly, *

The deterioration of the double Von Sion narcissus by the malformation of the flowers and their becoming green in color is undoubtedly due to the soil in which they are growing, being too rich. This particular variety resents cultivation perhaps more than any other member of the narcissus family. Even in Holland, where its cultivation has attained its highest success, a new supply of collected bulbils must be obtained each year. For these there are three sources of supply; certain islands in the north of Holland; mountains of France and Spain; and the mountains of northern Italy, those from each section having distinctive characteristics of their own. Of the three, those from Italy are now considered the best. These bulbils may be grown in nearly all sections of Holland for one or two years without visible deterioration, and in one section, — the Sassenheim district — for four or five years. The Von Sion cannot be grown on the ordinary bulb fields where hyacinths and tulips have been planted and for which the ground has been highly manured, for longer than two years. But in Sassenheim, where the soil is a fine sand with a mixture of clay, certain growers continue with the same stock for as much as five years. They are careful, however, not to manure the land in which the bulbs are planted. For purposes of restoration the land is sown with grass seed and allowed to remain in pasture for two years, and thereafter recropped with double Von Sion narcissus.

Certain growers in this country have attempted to handle this variety in a commercial way with the result that the flowers have usually become green or distorted the second or third year. There is no doubt that they can be grown successfully here provided they are grown in perfectly natural condition, and without the soil being enriched. Other narcissi like Emperor, Empress, and some other strong-growing sorts, do not seem to be affected by high cultivation as does the Von Sion.

PETUNIA GRANDIFLORA FIMBRIATA INTUS AUREA

From Die Gartenwelt

This beautiful petunia, which originated in two places, — the Sachssche establishment of David Sachs, Quedlling, and another firm in Erfurt, Germany, the latter having the precedence, — is the most graceful and prettiest of all single petunias, its name being its only objection.

The wonderful combination of colors produced by the mostly very soft pink, soft lilac coloring, etc., together with its various golden blendings of the radiating throat, attracts the eye of every visitor who has a sense for beauty.

Its beauty is further enhanced by the elegant habit of the plant and the very pronounced waving of the flowers.

Silver Wedding Basket

Our illustration shows a silver basket filled with twenty-five Bride roses. The basket was presented at a twenty-fifth wedding anniversary. As the picture shows, the roses were well-opened and with an abundance of Adiantum cuneatum and a draping of white satin ribbon form a beautiful and artistic object. The work was done at Norton's, Boston.

ROSES AT EDGELY

H. Simpson of the Edgely greenhouses thinks he has something good in the way of new roses. This something is a sport of the Queen of Edgely, very light pink with deeper center, almost the same shade as Baroness Rothschild, with a rich satiny sheen and of exquisite fragrance. He is guarding it with great care and hopes to have enough by next season to exhibit so that all can see it. He has also a sport of Liberty, but we did not see this. Richmond has made a favorable impression here and a good-sized order for stock has been placed with the originators, E. G. Hill Co. We noticed very fine Brides, Ivorys, Golden Gates, and Bridesmaids, and were told that these varieties had, on the whole, paid better per square foot than Beauty or Queen of Edgely, fine and profitable as these had proved.

P. Welch thinks Edgely is well located for a commercial rose establishment, being on a main line and in quick touch with New York and Philadelphia and easy for Boston, Baltimore, Washington, and Pittsburg. He says Queen of Edgely is still the popular rose in the Boston market and outsells Beauty every time.

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

President Vaughan has appointed Mr. E. B. George of Painesville, as vice-president for northern Ohio.

Prize Essays

At the recent meeting of the executive board in Washington, D. C., it was voted to offer three cash prizes of $25, $15, and $10, to be awarded for the first, second and third best essays respectively, on the subject of "The Ideal Employer." The essays not to exceed fifteen hundred words each. The prizes are donated by treasurer H. B. Beatty.

Those wishing to compete are requested to send their completed manuscript to the secretary not later than July 15. The manuscripts should be unsigned, but the full address of the writer should in all cases accompany same. The awards will be made by a competent committee and the names withheld until after a decision has been made.

WM. J. STEWART, *Secretary.*

NEWPORT HORTICULTURAL SOCIETY

A regular meeting of the Newport Horticultural Society was held last Wednesday evening, President Sullivan in the chair. The committee on advertising in the schedules reported excellent progress.

A communication was read from President Butterfield of the State College of Agriculture and Mechanic Arts, asking the society to send a representative to the next conference of the State Committee on Rural Progress. The request complied with and Robert Patterson was elected to represent this society. Mr. Patterson is widely known throughout the State as an enthusiastic worker in the cause of rural progress and development, and it seemed strangely coincident that just as he was being recognized as such that an opportunity should be presented to give more scope to his zeal in this direction.

Another feature of this meeting was an instructive address on chemical compounds for spraying for the destruction and prevention of insects and other pests by Mr. Dickey of the Danforth Chemical Co., Leominster, Mass. Mr. Dickey urged frequent and thorough spraying both against blight and insects with non-arsenic compounds. After his address several members asked questions, and his answers showed Mr. Dickey to be well posted on all matters connected with spraying compounds.

RHODE ISLAND HORTICULTURAL SOCIETY

The regular meeting of the Rhode Island Horticultural Society was held on April 19, President M. M. Burdick presiding.

William Appleton was elected to succeed the late Farquhar Macrae in office. The society voted to be represented on the committee of rural betterment, and elected C. W. Smith as its representative. A committee of five — Thomas Hope, Henry W. Angell, J. S. Kettlety, Charles W. Bayer, and Fred P. Hunt — was elected to secure a suitable lot for the erection of a society building.

A brief memorial service for the late Farquhar Macrae, who was an active member, was held. A suitable resolution to his memory was framed.

Adin A. Hixon of Worceter, Mass., secretary of the Worcester County Horticultural society addressed the meeting. His subject was "Fruit: Its Culture, Care of and Marketing."

KENTUCKY SOCIETY OF FLORISTS

The Kentucky Society of Florists will hold its regular monthly meeting on Tuesday night, May 2, at Coenen & Co.'s place, and a large attendance is solicited, as it will be Mr. Coenen's last meeting with us, he leaving for California in the near future.

IMPRESSIONS OF CANADIAN HORTICULTURE

It is a matter of sincere regret to us that the limits of our space will not permit the publication in full of a most excellent paper, under the above title, read before the Montreal Gardeners' and Florists' Club, on April 3, by Mr. Edgar Elvin. The following extracts from the paper seem to us timely and interesting not exclusively to Canada but to all sections of our great American country.

"Horticulture in Briton is not yet in extremis; on the contrary, it was never so full of vigorous life as to-day. It is true there has been a certain metamorphosis in the trade; the great old firms perhaps do not do the same business as of yore, but there has sprung up a host of small growers and florists to meet an increasing demand. The love of flowers was never so strong as now, as witness the magnificent shows so well patronized in London and the great provincial cities, and also the increased attention to gardening subjects by the weekly newspapers and monthly magazines. * * *

"My first impression of Canada was that of spaciousness. Things are on the grand scale. One has the feeling of breathing a larger, ampler air. This factor of mere size alone, it seems to me, has reacted on the Canadian mind; his mental faculties seem to take a wider sweep than the usual island-bound Britisher. This applies not only to his outlook on life, but is vigorously applied in his business; he thinks in continents, and is at home in the wholesale trades. Your born or naturalized Canadian gives the impression of great physical vigor; a sharp grip of life, a breezy optimism seems to possess him; a certain attitude of self-confidence betrays itself in his speech, walk, and general aptitudes. How much he owes to a bracing climate, to a freedom of opportunity, or a growing consciousness of prosperity and consequent independence, are questions which might well set the ball rolling in debate. * * *

"While I admire your Canadians in many respects I do not think the average man in our business is as well informed in all around horticulture as those at home. He is a good specialist but his general knowledge has been largely limited by his opportunities. Then again I might briefly point out what seems to me certain defects in his constitution. In the first place, he is inclined to impatience with all who do not conform to his own type. 'Wanted, a Hustler' is a common advertisement. Now, your hustler may be and often is a mere bustler, or a bungler, and sometimes a mixture of both. Your hustler is set over against the man with quiet, but clear intelligence, and often with a single superficial view the latter is out-classed, and suffers temporary eclipse. Now, I put it to you that there is no business where an exact, well-balanced judgment is as often required, where a little carelessness and inattention to detail count for so much as in ours; where a seemingly trivial error will leave most ruinous marks on the year's account. * * *

"After the men we come to the stores. One is immediately struck with the really magnificent carnations and roses; for length of stems, richness of coloring, largeness of blooms, and general aristocratic appearance they quite out-class those usually seen in florists' shops in the old country. * * *

"The Christmas dressing of the stores and windows was in good taste and the trade done a revelation. But, speaking generally, the conditions of the windows leave much to be desired for, with one or two conspicuous exceptions, they present a slovenly and often bedraggled appearance. In this respect you are behind the florist in the old country who always looks well to his windows. * * *

"As to floral and decorative work I can hardly speak but from what little I have seen and the catalogues I have reviewed, there appears to be greater originality of design here than in the old country, though in this respect there has been a great awakening during recent years across the water. The tendency in both cases is towards a more open and natural arrangement; and simplicity in designs. * * *

"I should like to put in a plea for more variety. The position of the rose and carnation we may regard as unassailable; we hope so. But perfection itself may become icily faultless, splendidly nil, when it is reproduced to satiety, and I feel sure the people would respond to something that would combine and associate well with the Queen of Flowers. Further, in this connection I share with you a growing faith in the boundless possibilities of progress in this great Dominion. In its train there is sure to come that development of the arts and luxury of life which is the basis of our business. There will probably grow up a civilization which will eclipse all the courtly and artistic splendors of the old world. Horticulture will open up a new field by supplying a large private-garden trade as in the old country. A few years hence, we who are on the ground will be regarded as the pioneers of our profession. It is our duty to keep our eyes on that future and anticipate its needs. * * *

"We may not be able at present to lead the way in hybridization, but it is possible to make experiments with the innumerable good things which are being raised or introduced by others across the seas. While your climate will always limit the area of your choice, especially in hardy subjects — seeing that you have an extreme winter and a tropical summer — still there is here as well as indoor a wide field for investigation. * * *

"I am convinced that what is needed now is capable leaders — men who will gather up and focus all the aspirations of their less able brethren; men of wealth and influence to devote both to the advancement of horticulture in the way that Sir Trevor Lawrence and Baron Schroder are doing in the old country; statesmen of the front rank to do for some flower what Mr. Chamberlain has done to popularize the orchid; growers like the Rochfords, May, Paul, and Veitch; hybridizers like Heal, Kelway, Suttons, and Dicksons of Ireland. Given such leaders, the people with their deep love for novelty in flowers will readily respond."

THE STRINGFELLOW METHOD

This question was recently debated at the Massachusetts Agricultural College by members of the senior class in horticulture, "Resolved, that the Stringfellow method of pruning trees is of no practical value."

That such practical questions are discussed will probably be a revelation to a large number of people, as most everybody appears to consider the work done at our agricultural colleges as confined to textbooks and a little outdoor work.

As all orchard men are aware, the Stringfellow method of pruning consists in cutting the trunks of trees just from the nursery back to eighteen inches, and the roots to one inch, leaving only a stub.

In the debate two men were assigned to each side, all of whom had carefully prepared their line of argument beforehand. The arguments advanced by the affirmative were: —

Chances for nurserymen to palm off old stock for new.

Carelessness in digging.

Transportation is no cheaper, as it takes two or three times as many pruned trees to get a stand.

Land should be so well prepared that holes can be dug without the use of a crowbar.

Roots will not grow down as claimed by advocates of Stringfellow method, but will follow the system natural to the tree, and no amount of pruning will alter this course.

Must have tap root to anchor tree.

Dry season will kill the trees for there are no roots to obtain sufficient moisture.

Downing advocates keeping a ball of earth.

Experiments show that with trees having roots 8 inches long, 91 per cent grow; of those with 3 inch roots, 97 per cent grow; while if the roots are only 1 inch long, only 36 per cent will survive.

Most experiment stations claim unreliability and do not recommend practising the method.

Only weak buds are left after cutting back the top, which develop slowly and unevenly, making a lop-sided tree.

Inspectors take care of insects and disease. Buyers need not take infested stock.

The method is an experiment, and practical men have no time for that.

In college orchard one year old trees are far ahead of trees planted two or three years ago and severely pruned before being set out, according to this method.

The arguments for the negative consisted of the following: —

Easy handling in the field both in shipping and planting.

Maintained that they will not dry out if set six inches deep.

Cutting causes fibrous roots to grow.

Cheaper transportation.

Less packing necessary.

Removes insects and disease. Inspectors cannot see the roots of every plant.

Two- or three-year-old trees can be handled and planted as cheaply as one-year-olds.

Nurserymen can dig them cheaper.

A deep, uniform, penetrating root system is obtained. Trees live longer and bear more regularly.

Trees are low-headed, thus protecting from sun-scald. Easier to spray, thin fruit, prune, and harvest crop. No weeds will grow under a thick head, hence less cultivation is needed.

A bigger orchard can be started with limited means, than with old-style trees.

Many illustrations and experiences were cited by both sides. A close general vote at the finish declared the affirmative the winner of the debate.

While several criticisms were pointed out, still the debate was successful, and serves to illustrate the notice that colleges are taking of the prominent questions of the day, and the efforts they make to interest and instruct their students in them.

R. L. Adams.

PELARGONIUM ZONALE "RUBIN."

Mollers Garten Zeitung.

"I have been at work," so writes K. Neubronner, sen. Neu Ulm, "to raise a zonal pelargonium, which will flower real early and abundantly, having not too large, but nicely marked leaves, grow compact and bushy but by no means dwarfly, with strong, upright flowerstalks and with few seed pods, and which is as hardy as possible against bad weather. This goal has been reached in "Reformator," which fact suggested the choice of the name."

After hybridizing with "Reformator" for five years to get a better color in the flower, K. Neubronner & Co., the firm of which above writer is a member, offers to the trade a double red pelargonium of Reformator parentage, which is shown in photograph on same page, namely, "Rubin." Other varieties are promised for 1906 or later. As the cut shows it has a mass of flowers above the foliage of twice the bulk of the foliage itself. The claims of endurance in bad weather or exposed position in this country have yet to be confirmed, of course, before it can be recommended for bedding purposes here.

G. Bleicken.

METROPOLITAN PARK ASSESSMENT

The Massachusetts Metropolitan Park district consists of thirty-eight cities and towns, named below. The cost of all improvements made in the district by the metropolitan park commission is assessed upon all these cities and towns. The law requires Boston to pay one-half of this cost, no matter where the work is done. The other half is divided between the other municipalities. The following table shows what each city and town pays on each expenditure of one hundred thousand dollars:

Boston	$50,000	Andover	$ 99
Cambridge	5,409	Hingham	327
Chelsea	1,456	Hull	418
Everett	1,210	Hyde Park	701
Lynn	2,859	Milton	3,043
Malden	2,481	Nahant	728
Medford	2,443	Needham	231
Melrose	823	Revere	3,043
Newton	5,154	Saugus	234
Quincy	1,313	Stoneham	346
Somerville	3,472	Swampscott	420
Waltham	1,334	Wakefield	388
Woburn	728	Watertown	920
Arlington	804	Wellesley	565
Belmont	431	Weston	483
Braintree	341	Westwood	98
Brookline	6,029	Weymouth	491
Canton	417	Winchester	1,019
Dedham	770	Winthrop	804

The prize contest between the school children of Waltham, in the collection of brown-tail moth nests, brought in to the superintendent, 24,742 nests. The winner of first prize was credited with 5,784 nests. One girl was among the winners, with 1,390 nests.

FLORAL DECORATIONS IN THE STREETS OF PARIS

From Le Jardin

Translated by G. Bleicken.

"The use of flowers and live plants seems to be no longer restricted to the decoration of apartments, and begins to invade the street for the purpose of greater pleasure to the eye.

Temporary use has already been made of them on the occasion of various observances but it is now proposed in Paris to add again to the architectural beauty of the capital by dressing it with flowers and plants in permanent fashion.

Mr. Desplas, president of the municipal council has received a delegation of merchants of the Avenue de l'Opera, which has submitted to him a project for decorating this grand Parisian thoroughfare by placing between the electric light posts, and in the same pattern as those, immense jardinieres filled with growing plants. This is a very happy idea, and we can only congratulate the merchants on their initiative and enterprise in proposing such a bold innovation.

After the blossoming balconies, blossoming streets! With our public gardens, our squares, and the fortifications transformed into a belt of parks, the Garden City would indeed be realized."

Paris is apparently approaching that happy condition suggested in the Louisville *Courier-Journal's* jingle: —

"No cheap or vulgar object mars
The household, it is said,
They even have no family jars,
But jardinieres instead!"

OBITUARY

Platt C. Reynolds, a horticultural and agricultural writer of wide repute, died at his home in Rochester, N. Y., on April 13, aged 79 years. For twenty years Mr. Reynolds was agricultural editor of the *American Rural Home*, also for a time of Green's *Fruit Grower*. He was secretary of the Western New York Horticultural Society until failing health caused his resignation.

LIST OF PATENTS

Issued April 4, 1905.

786,371. Pruning Implement. Ralph J. Meyer, Grand Junction, Colo., assignor of one-half to Gustav Van Hoorebeke, Grand Junction, Colo.

786,483. Fruit-Pitting Machine. Jerome Caldwell, Los Angeles, Cal.

786,487. Hop-Picking Basket. Franklin W. Craver, Santa Rosa, Cal.

786,547. Shipping-Package for Potted Plants. Harry G. Chamberlin, Chicago, Ill.

786,631. Garden Plow. Evan C. Davis, Jackson, O.

786,673. Fruit-Picking Machine. Amos C. Pitman, Brooklyn, Canada.

786,766. Pruning Implement. John G. Hunt, Lenox, Mo.

Issued April 11, 1905

786,855. Fruit-Gathering Device. Elwood Tatum, Westbranch, Ia.

787,164. Fruit Picker. Frank Fisher, Jr., Oconto, Wis.

787,214. Lawn-Trimmer. Johan H. E. Peters, Wauwatosa, Wis.

Issued April 18, 1905

787,477. Fruit-Picker. Julius G. Smith, Liberty, N. Y.

787,619. Lawn-Mower. Isaac German, Baltimore, Md.

787,710. Tool for Budding. Herbert C. White, Valdosta, Ga.

787,773. Shipping Crate or Drum. Jules Laine and George Castillon, New Orleans La.

OUTDOOR ART

SPRAYING FOR SAN JOSE SCALE

Read before the Tarrytown Horticultural Society March 28, 1905 by L. A. Martin

The question of what will kill the Scale, without injuring the trees, has been asked many times; formulæ in numbers have been given; many of them differing only in the right quantity of each ingredient to be used to make the solution, but any one when prepared rightly and according to directions, would do the business to some more or less satisfaction.

We have had the opportunity (not the pleasure) to fight the San Jose Scale for the past few years, and to learn which would be the best remedy for destroying the pest, and have tried quite a few different kinds, but to-day I find that the Lime Sulphur Salt wash, as per formulæ given by the New York Agricultural Experiment Station, although quite troublesome to prepare rightly, is the most effective because of its ability of destroying the Scale with no injury whatever to the trees, providing that the spraying is done while the trees are in a dormant state, say from December to the time that the buds begin to swell in spring.

This spring we have done quite a lot of spraying for this scale, as our fruit trees, such as apples, pears, plums, peaches, also currant bushes, were found covered with it, some of them were so badly affected that we decided to cut them down; at the same time we trimmed the others of surplus wood, and where impossible to reach every branch with the spray, they were headed a little, and all this wood was burned at once.

As stated above, we have used mostly this season Lime Sulphur Salt treatment, but for experimental purpose, we also tried the Lime Sulphur Caustic Soda (of which I shall speak later), "Hammond" Horicum and "Lion Brand" Lime Sulphur Salt preparations, which, if they are as described to be, will save the trouble of cooking, as it has to be done for the first mentioned wash, and it may be just the thing to use on small places having only a few trees infected; as they only require to be diluted with so many parts of water. What effectiveness those preparations have on the scale remain to be seen.

The formulæ for making the Lime Sulphur Salt wash, as given by different writers, varies more or less, but the following will be found perfectly reliable:

Unslacked Lime	30 pounds
Ground Sulphur	20 "
Salt	15 "
Water	60 gallons

There are many ways of preparing this wash, but in our own practice we have done as follows: Slake the lime in a large iron kettle to form a creamy solution; make the sulphur in a thin paste with hot water, then add sulphur and salt with about 20 gallons of water, boil for about 45 minutes, then add the balance of water needed to make the 60 gallons (warm water if possible) and bring the whole to the boiling point. To prevent clogging of the spray pump, strain through a very fine sieve or cloth, and use the materials while warm.

No special pump is required to apply this wash. We have used with satisfaction Myers' Spray Outfit, with a Vermorel Nozzle attached. On spraying the trees select if possible fine, still days; if no wind is blowing more perfect the work will be done, and less loss in materials. Go over the trees carefully and from every side, so that every

part is completely covered with the wash. A wagon or cart drawn by a horse, the driver to take care of the pump and another man handling the hose, is all that is necessary. For tall trees we have used advantageously 25 feet of 1-2 inch rubber hose attached to a long pole; in this way we were able to reach every part of tall apple trees. This wash is ruinous to clothes, so do not wear your best Sunday suit in doing the work.

I have also used this season Lime Sulphur Caustic Soda, which does away with boiling, and consequently saves time and labor, but will it be as efficient as the above wash? time will tell; it is highly recommended by many writers and experienced men. The ingredients needed are:

Lime, unslacked	30 pounds
Sulphur, ground	15 "
Caustic Soda	6 "
Water	50 gallons

And prepared as follows: Slake the lime in a barrel with 6 gallons of water; as soon as slaking commences add the sulphur, which has been previously mixed in hot water to a paste; as soon as the boiling of the lime has partially ceased, add the Caustic Soda, which will make it boil again; pouring water as needed to slake the lime well, and keep stirring until chemical action has completely ceased; adding the required amount of water to make the 50 gallons of mixture, it is then ready to spray on the trees, after having been strained to save a lot of trouble when spraying by clogging the pump.

The effect of those washes upon the trees seems to retard the growth in spring for a week or ten days, but when starting they grow more rapidly and in a short time will be very vigorous, with abundant foliage and better color.

The immediate effect on the scale is the death of all with which the mixture comes in contact, within a few days after the spraying has been done, showing that when the trees have been thoroughly sprayed and well covered with the mixture, no live insects are to be found; and as the wash or residue will remain for a long time on the trees, it prevents the newly hatched young from finding a place to settle.

In closing, I may mention that all the washes we have used have been recommended in the bulletins of the New York Agricultural Experiment Station, which directions were carefully followed, and would say that any one interested in the spraying of fruit trees, either for scales or other injurious insects, should send for the bulletins of the station, which are forwarded free to any one interested.

Governor Douglas of Massachusetts takes opportunity in his Arbor Day proclamation to call attention to the moth pests and urges that there is no more fitting way to observe the day than by devoting it to efforts to rid the trees of these destructive things. Another suggestion that will attract especial attention is that of lining the roads with trees which will provide fruit or nut products as well as shade. He estimates that the commonwealth contains more than a million acres of almost worthless land that would be very valuable if covered with forest trees.

AND CRAFT

ROCKERIES

By Emil Glenapp, Hamburg, in "Wiener Illustrirte Garten-Zeitung"

Translated by G. Bleicken.

After a short introduction on the evolution of landscape gardening from the artificiality of the Hanging Gardens of old Babylon to the modern naturalistic style, the writer gives a few very plain and tasteful ideas on rockeries and water scenery. We give these in his own form as nearly as translation will permit:

"The builder of natural scenery must not fall into the error of trying to transfer pictures which nature has set up upon a plain of a mile in length, to a small place. Every piece of ground, even the very smallest, can contain at least one characteristic object of nature, but its size must not be out of proportion to the rest of the garden." Bearing this in mind we continue now with his remarks on rockeries especially:

"Also rocks must be admitted into the garden, as difficult as is the test of grouping them, only as if arranged by nature, and they obtain the highest effect when they most nearly approach nature. A main requirement in groupings of rocks is to see that they are erected out of one species of stone and not composed of diverse rock species. If we neglect this rule of nature, our rock scenery will show too evidently that nature has been cheated, because she is not capable of producing diverse rock species upon local-limited grounds.

"Further, rocks should maintain the position in which they are naturally found. Pieces from large rock formations which are characterized by their horizontally placed layers, should only be used where rock groups are placed on slopes, on the foot of a hill, or in a ravine, where they have the appearance of having been pulled loose from their original places and now thrown on these places by some great force. In such cases the landscape need not take into consideration their former position; on the contrary, the informal position suggested will prove, or let it seem possible, that here in the past a battle of nature has occurred.

"Rocks, if they accompany the slopes of brooks, or if they shall form a waterfall, must be placed upon a firm foundation to avoid an underwashing by the water, and thereby cause a shift of their position. Of course such foundation must remain invisible. Waterfalls, which tumble down with wild noise over rocks, should not be planted with weeping willows, or similar trees of pendulous habits, because their character of rest and melancholy does not agree with those places where nature seems in the wildest battle. Black firs, pines, and evergreens of all forms find picturesque and correct application as a framing of such a wild natural picture.

"Fountains, brooks in their course, or similar water scenery in connection with rocks can be prepared by the art of the landscape gardener through corresponding planting, into the loveliest places of the garden. Such pieces accept only low-growing flowering shrubs

of rich colors. Deciduous trees of picturesque designs may be used in such places, to be 'planted under' with perennials, violets, forget-me-nots, and meadow plants. Also roses may be planted on such places."

We wish to close with accentuating the last sentence about rose planting. Very often a suitable place for the rose-garden near enough to a place of rest and comparative coolness in summer-time, is difficult to select in many gardens. Of course, the necessary light of the sun must not be obstructed. During the greater part of the day the roses should have an undivided light.

OUTDOOR GROUPING OF PLANTS

From "Landscape Gardening," by J. Weidenmann

Grouping we believe to be the most delicate, if not the most difficult subject, to be treated in such a manner as to lead to a tasteful and proper conception of it. No rule can be established, for the combination of various kinds of trees in one group should never be imitated on the same ground. No one can ever be a landscape architect who does not possess tasteful originality, and an eye for the beautiful harmony of lines and colors. Before one plants his trees, it would be well for him to visit such places as are acknowledged schools of taste, of which Central Park is the chief. There the various groupings may be studied, and the reasons why they occupy just such a place be reflected upon. The general forms and outlines of the groups produce different effects, and tints and colors require particular consideration. In the several seasons each group experienced a change, either slight or more striking, and that the changes constantly produced were in harmony with the various surrounding groups. Observation would teach that there was a particular place for each group, and the plants for it are selected with the groups they compose, and with the groups that surround it. Groups vary in size, according to the size of the place and the effect required, remembering that lawns are all-important, and they should not be sacrificed. If there are too many trees, they will destroy the beauty of a landscape, that is, its lightness and freedom.

Groups of shrubs may properly be placed in curves of roads and walks, so as to give a natural effect. The nearest tree to the road should be from ten to twenty feet from it, so that when grown it will hang down over the margin of the lawn. Shrubbery is planted not nearer than three feet. On the principal lawn, these groups are composed of choice trees and shrubs. Groups consist of evergreens, mingled with deciduous shrubs and trees, or of deciduous trees and shrubs, or of shrubs alone, according to the effect desired to be produced. Elevated portions of the land often afford fine sites for a group, which seems to greatly raise the place, and consequently give a more undulating appearance to the land. On both sides of the entrance groups are made, both to hide the entrance from within the grounds, and form a pleasing background, as well as to give prominence to the entrance from the outside. Groups are also placed to form backgrounds for trees, flower beds, statues, and vases. Groups are planted to separate the ornamental grounds from the orchard and vegetable garden and outbuildings. Grouping in extensive grounds, is carried to the extent of making thickets or mass grouping. Dells or low sections ought not to be filled up with planting, but the beautiful sweep of the green turf should be left free to receive the lights and shadows. Grouping immediately around the house should not be done, neither should the house be left entirely destitute of trees. While lawns are large, single specimens of trees should be planted here and there. Where several trees or groups are planted their relation to the lawn and road should differ in order to avoid all appearance of regularity. A similiar group or tree should not be placed on each side of the house, nor should there be any similar attempt upon the grounds. Constant variation should be sought and at the same time the creation of absurdities avoided. Groups are not to be planted indiscriminately, but a good reason ought to be had for the disposition of every group and every tree, either for its beautifying effect, or for its usefuness and beauty combined, and there should not be a stronger reason against the planting than there is for it; for a group, attractive in itself, may be placed in such a position as to greatly mar the aspect of the whole principal ground, which would be a gross error. The size of groups depend upon the extent of the grounds. This is applied to the grounds as a whole; taken individually, their size or extent should be in proportion to the curve, point, or hillock, on which they are planted, or according to the background, cover, or shelter required. The size of groups is regulated according to their combination. The needful subject for consideration is their form. Worcester says grouping is "the art of combining objects with a view to picturesque effect." This has especial reference to the ground plan or disposition in planting. In planting small groups do not allow any great variations in their horizontal outlines, but larger ones afford all the opportunity necessary for bays and recesses, with gradual or bold projections. We also have to give much attention to the vertical or top outline, which depends upon the shape and height of trees and shrubs. The rule concerning these is that the tallest is placed in the center, but not strictly in the center, then comes the tree of medium size, and the smallest are placed on the margin. If groups are placed so that only one place can be seen, the largest trees or shrubs are planted in the rear. The exterior shrubs should not be all of the same height, but be so placed that their top line will present a proper amount of variation. Trees or shrubs are often grouped by arranging them according to their foliage, making a group of small-leaved trees, a group of those with cut leaves, another with pinnated foliage; but in every case color and size must be considered as equally important. Plant at unequal distances and not in line. This principle should be carried out in all grouping, whether in small or in mass planting. Landscape architecture is no less difficult than painting, colors are living and changing. It is necessary to be familiar with them or the landscape may be dull and lifeless. The art is to produce the beautiful and picturesque by unity, variety, and harmony.

ROADS AND WALKS

By E. P. Adams in the American Association of Park Superintendents' Bulletin

Although roads and paths are needed in every park, they should not be more conspicuous than the need for them required. Their curves, both horizontal and vertical, should be graceful that they may be pleasing from whatever point viewed. And they should be well constructed in order to last a long time without repairs and that they may not become unsightly by washing away, nor expensive to maintain. They need not be very costly to be permanently good roads. The thorough drainage of the road foundation is the most essential factor in road construction. This, with a surface compacted sufficiently to carry the heaviest load without being cut up by it and smooth enough to carry all the surface drainage quickly to the side drains, will ensure a good road. In general, all loam, however deep, and all clay within three feet of the surface grade, should be removed and gravel or broken stone substituted to subgrade. All filling should be compacted by rolling before the surface is added. Any hard rock will do for the foundation, but for the broken-stone surfacing only the best trap rock should be used. If the foundation is unyielding, four inches of macadam is sufficient depth of surfacing. Soft subsoil requires greater depth of rock and Telford construction. The drainage of foundation is improved by placing the largest stone at the bottom of the foundation. It is important to make sure of the proper and complete disposal of both foundation and surface drainage. Immediately after a soaking rain is the best time for surface rolling. Catch basins should be frequent on steep grades, and gutters should be paved on all steeper grades than five per cent. For the macadam surface I prefer to use two grades of broken stone thoroughly wet and sprinkled with sand before rolling, then a half inch of stone dust from the crusher thoroughly rolled when wet. If a soaking rain does not come conveniently, a sprinkling cart must be used before rolling. Only a steam roller can properly compact the macadam and give to the surface of the road the hardness and smoothness essential to its proper drainage.

Paths to be permanent should be constructed like the roadway, but with less depth of macadam and smaller stone. A heavy hand roller used frequently after soaking rains will keep the surface in a smooth condition. But in the natural woodlands of the parks, I prefer paths without definite outlines, from which the roots and stone only have been removed and on which the pine needles and leaves have been allowed to fall in Nature's way.

ENGLISH STARLINGS IN AUSTRALIA

From Report of United States Consul-General Bray, Melbourne, Victoria

The English starlings, first introduced here from Great Britain for the destruction of insects, and protected by law, have completely changed their habits, and have now become a serious pest to orchardists. The few pairs of these birds brought into the state a few years ago have increased to myriads, and have become so destructive to the fruit industry that the regulations framed for their protection by law have been repealed, and energetic steps are advocated for their eradication. The fruit destroyed by them includes peaches, pears, cherries, figs, apricots, plums, grapes, straw berries, and apples. Both vine growing and fruit growing are seriously threatened if the pest is not suppressed.

From many districts reports come that fruit growing will have to be given up unless some radical steps are taken. As many as ten cases of apples have been destroyed by a flock of these birds in less than half an hour. Valuable insect-eating birds, such as kingfishers, diamond birds, tree swallows, and tree creepers, are being driven out of their nesting places in tree hollows by swarms of starlings, and before long the birds so useful to the farmer and orchardist will be driven out of the state. The starling is said to raise five broods in a year and multiply with amazing rapidity. In one district three years ago not one was to be seen, now there are thousands.

The Royal Agricultural Society of Victoria and all other similar associations are uniting in a request to the government to take active steps to eradicate the pest.

EASTER MARKET REPORTS

BOSTON Testimony as to the Easter trade in this market lacks uniformity in many minor details but may with safety be designated as satisfactory to all concerned — that is, excepting those who "want the earth." A noticeable feature about the business was the absence of any inflation worth mentioning in the prices of either flowers or plants. Undoubtedly the explanation of this phenomenon is that there was no scarcity of anything and a plethora of some things so that the incentive of demand exceeding supply was wanting. Only on one morning at the market was any stand made for increased values on carnations, but the movement died at an early age and prices were down to normal before the close of the session.

Flowers, in general, were received in good shape and "salted" material was not in evidence to any great extent. Colored flowers in all classes sold best. All such things as white carnations, stocks, Bride roses, lily of the valley, and bulbous flowers generally, were left over in greater or less quantities. American Beauty roses of high grade sold freely at from $25 to $33 per hundred, medium grades bringing from $12 to $20. Very few fancy Bridesmaids brought over $10, and the figures ran all the way down to $1.50 per hundred on the refuse. In carnations, Lawson took the lead, followed by Enchantress and Fair Maid as the next best sellers. Violets had a splendid clean-up at good prices. Lilies were, of course, sold in enormous numbers but there seemed an inexhaustible supply from which to draw and many were necessarily held over for disposal the next week — not wholly a disaster judging from the fact that lilies are bringing about as much in the market the week after Easter as they did the week before. The shipping business was good — confined, however, to the New England territory and a few Canadian points. Plants were, as elsewhere, the main attraction for Easter. The usual assortment was available, consisting of lilies, azaleas, acacias, genistas, spiræas, Crimson Ramblers, etc., and the quantity disposed of was probably in excess of anything in past years. From a wholesale standpoint this end of the business was an unqualified success, for every plant worth having was sold ahead. On azaleas, even, it was next to impossible to buy one from growers hands three or four days before Easter. The retail stores appear to have stocked up over-freely in some instances and the number of plants necessarily held over was larger than at any time heretofore. No regrets are heard, however, so there is manifestly no apprehension as to their ultimate disposal.

Reports from various New England centers outside of Boston indicate a similar experience generally. In some instances a reduced trade is reported, and in all cases mention is made of the fact that there was an abundance of all seasonable plants and flowers, and no advance beyond ordinary prices on anything.

BUFFALO The market for Easter week, discouraging at start because of inclement weather, ended satisfactorily to all. Saturday was an ideal day in all respects; an immense business was done and everything was well cleared up save a few lots of bulbous stock. At the wholesale houses not a carnation was to be had at five P. M. Retail as well as wholesale people report a thorough clear-out on all Easter stock.

CHICAGO Lilies of course were the strong feature of the Easter cut-flower market; starting with prices quoted in advance holding firm until Friday, when a slight advance prevailed. There was no complaint as to lack of quality, but the proportion of long-stem stock to the total offerings was below expectations. Violets were exceptionaly good for so late a season. A sharp active trade in which all of the trade were good buyers, boosted values to $1 for the best eastern violets, and several consignments reached $1.25 per 100. American Beauties experienced a heavy demand and the retailers found no fault with the prices asked for select grades, the 15 to 24 inch sizes being in greatest demand. The holiday requirements for these sizes it seems impossible to fill. The demand for white carnations was better, comparatively, than for colored, save for the fancy grades of Enchantress, Estelle, and Mrs. M. A. Patten, which were in small quota. Local retailers were strong when choice Prosperity could be had. The demand for orchids resulted in cattleyas bringing this spring's highest price. Receipts of bulbous stock were heavy excepting of fancy tulips, on which values averaged the best for the season. Lily of the valley commanded an increased call. Liberty roses were again in light supply. Mme. Abel Chatenay, American Beauty, Bride, and Bridesmaid roses received a heavy call. Smilax reached the highest price of the season. All other greens were in ample supply.

The out-of-town-demand was never better and local trade was ahead of last year.

Many more and better-grown plants were seen than ever before, lily plants leading; large pans with up to three dozen flowers to the pan were in great demand. A word about Easter lily pans. These are best planted a few days before the big event. Where large specimens with twenty-four to fifty flowers are wanted this is a good opportunity to use some of the green plants which failed to open in time along with others showing several developed flowers; every bud will eventually open giving a long succession of bloom which proves so satisfactory to retail customers. Azaleas held, as heretofore, a leading place. They were fine and it was particularly pleasing to see a good proportion of the pyramid and branched specimens which are so beautiful. As to varieties, Van der Cruysen was in the lead, fourteen to twenty-four inch crowns being the most popular. Hydrangeas were better on the average than when Easter comes earlier and the dwarf small-flowered, with many branches, proved the best seller. Heathers were only in limited supply, Erica Cavendishii and cupressina prevailing. Other plants offered in greater or less numbers were boronias, roses, rhododendrons, deutzias, genistas, lilacs, Crimson Ramblers, and hyacinths. Plant arrangements were very popular. Pteris tremula, and other ferns were used largely in the make-up of plant baskets.

Retailers locally prepared for a tremendous demand and their anticipations were fully realized. Of course some lines were in over supply such as extra large baskets filled with azaleas, etc. However, Easter of 1905 goes on record as the best ever.

CINCINNATI From all reports, business this Easter has been very good and, with many, better than expected. All kinds of stock sold readily and good prices were realized with the exception of some bulbous stock such as tulips, poeticus, etc. Dutch hyacinths were a little scarce owing to the previous hot weather and sold readily at a fair figure.

Roses and carnations arrived in very large quantities,the former taking the lead and were easily disposed of. American Beauties were more in evidence this Easter than usual — especially short-stemmed stock. Violets were scarce with the exception of shipped ones and for these sorts there was very little demand.

LOUISVILLE The Easter business this year was probably a little better than in previous years, there being actually nothing of much value left Sunday morning. Lilies sold unusually well, and it took some hustling to get enough together to fill orders. Carnations also cleaned out well. The demand for roses was a little disappointing, probably caused by the excellent qualities of carnations. Lily of the valley, home-grown, was unusually good, while one lot of shipped stock was nearly spoiled upon arrival. Lilacs, mignonette, daisies, etc., all sold moderately well, also plants of nearly every description.

NEWPORT The market at Easter was all that could be desired. The dealers anticipated increased trade over former years and this increase materialized to the extent of nearly every dealer clearing out all stock at prices in advance of last year.

All lines of both plants and flowers were in better condition than usual, — lilies in particular. Hyacinths, daffiodils, and tulips were sold in large quantities. Callas were not so much in evidence as usual. Lily of the valley was scarce but of good quality and profitable to the retailer. Carnations were picked up rapidly, so were roses at prices twenty per cent in advance of last year for the best grades.

In plants, Crimson Ramblers were the favorites. These were offered in much larger specimens than formerly, making them of great value for church decoration along with palms, and they were purchased in such quantities for this purpose that the dealers had but little difficulty in disposing of the medium-sized plants later. There were more violet plants in pots sold than usual, and the reason, apart from their real worth which is always apparent, was the attractive way in which they were displayed in the florists' windows. Windows received more attention this year than at any Easter within recall and those most concerned are satisfied that they are well repaid.

The stock bought out of town arrived in better condition than ever before. Shippers paid more attention to packing, and it is needless to say that there has been plenty room for improvement in this particular. It has been often a matter of wonder how growers who devote so much time and pains growing plants should pay so little heed to the oft-repeated complaint regarding poor packing.

Taken all in all, this was the most satisfactory Easter from the florists' standpoint in many a year. An especially pleasant feature was the appearance of a much greater variety in large quantities than formerly. This should make each recurring Easter festival more interesting and welcome to the growers of miscellaneous stock. As for novelties there were not many, the most conspicuous being Baby Rambler (if it can be called a novelty any longer). It is a good seller and its usefulness is by no means ended with Easter.

NEW YORK Easter conditions for 1905 were fairly conducive to good business. Its lateness did not unfavorably affect trade as had been feared, the cool temperatures having held society people in town and, by retarding out-door verdure, made the florists' product more enticing. As in previous years the preponderance of public favor went to plants. Buyers, as a rule, were not disposed to be critical as

o varietes, individuals generally having a well-defined idea of the amount they wished to spend and being solicitous only to secure the most showy result up to that limit. Thus novelties, as such, were not particularly in demand and the plant growers were fortunate in that they had taken few chances in this direction.

The retailers found the public disposed to buy early in the week and a very heavy business had already been done by the time the full rush was on. This insured more care in packing, messenger delivery instead of crowded jolting wagons and, with the remarkably high quality of the product, provided the public with the most satisfactory line of Easter gifts thus far. To this the lilies were the only exception and that only in part. The quantity of lilies was far in excess of that of any previous year and many of them were of exceptionally high quality. If the growers of the balance got even the value of crates and express charges out of it they got more than the stuff was worth. Many lilies, good as to flowers, were also too short in stature to bring full values. Both theory and evidence favored the conclusion that the growers, rather than the bulbs, were responsible for most of the lily misfortunes. This view might, however, be modified in some degree if it were possible to computé the number of bulbs discarded in their early stages by particular growers.

After lilies, the plants most heavily represented were azaleas — red predominating — Crimson Ramblers, bulb flowers, hydrangeas, genistas, spiræas, ericas, acacias, and daisies. The enormous specimens of former years were conspicuously missing. Of Crimson Ramblers very few eccentric distortions were seen, most of the plants being trained in neat bush form and the flowers were noticeably more brilliant than ever before. The new blue hydrangeas, with their spindly habit, were no match for the good old Otaksa in the public eye. Ericas — beautiful little specimens of the ventricosa type — were very much more in evidence than ever before in this country, the showing of persoluta and other small-flowered kinds being correspondingly reduced.

In lesser quantities were rhododendrons, Dorothy Perkins roses, obconica primroses, lilacs, Campbell violets, boronias, and gardenias. The boronias were perfect beauties and did not require the misleading appellation of "new heather" which was attached to them in one prominent window. English primroses were unaccountably rare. A few handsome cattleyas and oncidiums were seen, also double-flowered pink hawthorn and Crassula hybrida.

The growers being equally accessible to all retailers willing to pay the price, much similarity was noted in the stock offered by the stores in all sections and of all classes. Dealers in the more flush sections went heavily into jardinieres and hampers of mixed plants. Odd designs, including some of the successes of last year, were generally absent, zinc-lined hampers, rectangular jardinieres, and round, bulging, cheese-shaped baskets of plain material being almost exclusively used. For pot plants simple baskets of braid, rush, or woven willow, natural or sometimes gilded or colored, were invariably seen, and for groups of lilies, white enamelled wooden buckets ruled. The quantity of ribbon and lace used was much less than for many years. In some localities the use of crepe paper and Porto Rico mats was practically abandoned. The only notable novelty in the way of a plant box was an oblong jardiniere of which a large number were sold by Alex McConnell. The material is in imitation of old marble, artistically adorned with a procession of bas-relief figures.

The multiplying of retail stores in the best residential sections has divided up the business so that no one or several establishments holds the distinctive prestige possible some years back. The alignment is constantly changing and no one can calculate exactly the amount of material he will need. To this fact is due, in part, the fact that, while some dealers were well sold out by Easter noon, others were still heavily over-stocked, and that local report on the Easter trade varied from "splendid" to "very unsatisfactory." If it were possible to compile full returns and make exact comparisons, however, it would be found, beyond a peradventure, that the Easter plant trade for 1905 was by far the largest in New York's history.

Once more it was up-hill struggle for the cut flower. Dealers did nothing towards securing a supply in advance and gave the plant business their undivided attention. Hence flowers received previous to Saturday benefited nothing from the proximity of Easter. Saturday's shipments were a staggerer for the wholesale dealers, being augmented by the combination of sunny skies and the hoarding propensities of growers. The retail trade was quick to take advantage of the situation and much material was sold for considerably less than it would have brought if offered two days earlier. Saturday's stock was, as a rule, superlatively good and worthy of a better appreciation. On the other hand, Friday's shipments comprised the worst lot of stuff ever sent to New York. Roses mould-spotted as with measles, violets decayed and dropping to pieces, and carnations closing at once on exposure to light and air were a sad commentary on the rank stupidity still prevalent in many quarters, and their scornful reception, even by the street Greeks, was the final step in their degradation. Roses, even when good, were not favored as Easter flowers, and the better part of the meager flower demand was monopolized by lilies, violets, lily of the valley, and bulbous stock. Sunday used up an enormous quantity of violets for street wear, the rather limited proportion of really good ones bringing stiff figures all through. The unseasonably cool weather was all that made violets at all possible for so late an Easter. An immense quantity of worthless violets was left unsold.

An excellent clean-up at the early morning flower market on Saturday was looked upon as a good omen, but it petered out quickly. 28th street enjoyed its usual wagon blockade, but the old-fashioned shirt-sleeve hustle did not materialize. All wholesalers kept open the entire night.

PHILADELPHIA A good Easter. There were plenty of flowers to go around and prices kept steady at the advance noted in last week's report. Roses were in good shape and steady, — perhaps a little too many whites as the Kaiserin crop was evidently carefully timed for Easter. Carnations were even livelier than roses and shades like Joost sold extra well. White was the only color that went a little draggy. Big demand for violets and supply short; $1.50 could be got for the best without any trouble — something unprecedented for this market at Easter. Cut lilies were too plentiful, but tulips, freesias, and daffodils were sold about down to the limit of supply. Many orders for orchids had to be turned down. A few cattleyas and cypripediums were all that were around. Sweet peas were in fine shape and sold well, mignonette draggy. Gardenias came in more plentiful than expected, but most of them were disposed of at fairly remunerative prices.

The plant trade was as usual, enormous, and overshadowed everything else. Taken as a whole, the quality was finer than ever before, the variety at least equal, and the quantity enormous. Where it all went to is a mystery, but by Saturday night there was but little left anywhere.

Lilies topped the list, with azaleas and ramblers close seconds. Genistas were in good supply and unusually well done. Hydrangeas were fine and good sellers, but there were perhaps a few too many of these. Spiræas and deutzias came next and after them the cheaper subjects such as hyacinths, daisies, tulips, daffodils, etc. The Bottle Brush and the bougainvillea were in evidence — some very fine specimens of the latter, eight and ten feet high — making a mangificent show.

The stores in the center of the city had the usual overflow annexes, but it seemed that there were far more of the outside tradesmen indulging in a plant flier. Druggists, grocers, haberdashers, milliners, jewellers, butchers, bakers, undertakers, shoemakers, hatters, clothiers, general stores, department stores, and goodness knows how many others, were having a try at it, all over the city, but especially in the outlying districts — Kensington, Frankford, Germantown, West Philadelphia and so forth. No doubt they reached many a buyer who would otherwise have gone without, as it was simply impossible for the regular stores to handle all the trade. The sidewalk merchants especially those on Market street, Ridge and Germantown avenue, City Hall plaza, etc., were doing a rushing business up to early on Sunday morning.

As for new features, it cannot be said there was anything especially novel either in plants or in made up baskets. A few Baby Ramblers pretty well done were to be seen, but not enough to make much of an impression. We look for a blaze of these next year and predict they will be the greatest seller of the day.

Gleason & Wolf is the title of a new firm which blossomed out at 1419 Chestnut street on Easter week. Mr. Gleason states that they may keep open permanently if conditions pan out.

Pennock Bros. were strong as ever for variety and excellence of their display. Ericas, crassulas, English primroses, and many other less common subjects were much in evidence with them.

Julius Kohler & Son, Frankford, had a rather unique window display — a lawn scene with two miniature lakes in the foreground on which were ducks, swans, and water fowls; in the background were shrubs near the mansion and coming down the driveway a floral automobile drawn by a bevy of white doves. Flowers were blooming on the lawn and at the sides. This attracted great crowds for days and was a mighty good advertisement.

PROVIDENCE Easter business this year was about equal to last year's, without many violets to help out, which made quite a difference in receipts. Blooming plants of all kinds sold best, although there was some call for palms and ferns. Good ferns were quite scarce and have been since Christmas, both small and large sizes. There was an abundance of good flowers of all kinds except violets. There was also some poor stock which should not have been sent out at any price. The large department and grocery stores sold lilies in pots for less than the regular retail florists could buy good stock for, and they sold a lot of them, which

however, they did not agree to deliver in good condition. It looked the first part of the week as though we were going to suffer from this competition, but we all sold our regular share at a little less than former years. The delivery of plants at such times is quite an item. Quite a number of the florists advertised several days "Grand display of Easter flowers, etc.," which I think helped some. Light colored azaleas sold best this season, which was a change from former years.

PITTSBURG Most retail and wholesale houses report extraordinarily good business. Saturday opened up with bright sunshine and brought a vast amount of people to the down-town districts. It seemed in the morning, the way plants came in, that there would be an overstocked market, but towards the afternoon the shops and stands were denuded and those who waited until evening before buying were disappointed. Everything brought very good prices. Although their new quarters were not quite finished the Pittsburg Florists' Exchange used it as salesroom and handled an abundance of select flowers, as did also Pittsburg Cut Flower Co. and J. B. Murdoch, and good prices were obtained generally for all class of blooms. Carnations were not so plentiful and good fancy Enchantress and Lawson brought the highest figures. The market stands were glutted with bulbous stuff, but all were disposed of by evening.

CHICAGO TRADE TIPS

The best things seen here for Easter: E. Wienhoeber Co. had the fancy single tulip Rose Luisante. Its habit of growth is perfect and as a late forcer it is unequaled. C. Samuelson used Azalea Mollis extensively in basket work. The delicate shades and graceful flowers are enchantingly effective. Boxes of yellow hyacinths were exclusive at Fleischman's. At Muir's grand Boulevard store a miniature poultry farm composed the window display and live chicks chirped a welcome.

The coupon tag used by Klunder and at Friedman's is a fine example of good system. In size it is slightly larger than the regular shipping tag. Every one is numbered, showing a corresponding number on the stub which, when signed by recipient, is returned to the office where it is checked off. This obviates the carrying of a receipt book and requires address to be written only one time.

Easter plant trimmings were in light shades, white predominating.

Rhododendron Catawbiense was the favorite here.

Primula obconica and ericas planted in twig baskets were a big success.

Bulletin 93 on Mixtures and Appliances for Spraying, by T. C. Johnson, issued by the West Virginia University Agricultural Experiment Station, is an exceedingly useful and timely document. Illustrations are given of the various approved spraying machinery, nozzles, etc., and showing them in operation. Full directions for the preparation of mixtures in large or small quantities. Spraying is now one of the essentials of successful culture.

Lowering a Big Palm

The illustration shows a very difficult undertaking successfully performed under the direction of head gardener Alois P. Frey in the palm house at Lincoln Park, Chicago. The Phœnix reclinata, which was lowered, is about forty years old, measures thirty-five feet in height, and forty feet spread, and weighs about ten tons.

Its large growth required more headroom, and as these houses are the highest in the country, it was necessary to lower this plant. Excavations all around the main stem, about 10 feet from the center, were made to the depth of 15 feet, the plant being steadied by block and tackle, fastened around the trunk, and braced from the iron supports of the palm house. After the required excavations had been made, the soil was worked from underneath the plant, which, by its own weight, settled down, inch by inch, until the proper level was gained, about eight feet below its original position. In its present position, it will be planted no deeper than originally, as the soil will be leveled off around the trunk.

KILLARNEY IS HARDY

It will be pleasant news to many to learn that the Killarney rose has proved perfectly hardy without any protection whatever, through the past winter in the vicinity of Boston. In a quite promiscuous variety of roses of different classes, few have gone through as well and none better.

It is said that Disparene, the great Bowker insecticide is the only preparation that will destroy both broods of the cooling moth. The handbook of insect pests and plant diseases issued, free, by the Bowker Insecticide Company, Boston, tells all about Disparene and many other good things.

Something New for Decorating

Now that the season for Wild Smilax is over and no more stock can be supplied, I wish to call your attention to the Branches of the Huckleberry Tree as a most elegant Decorative Green.

It is largely used by the Florists of the Pacific Coast, Washington, and Oregon, in Decorations. The Branches are FLAT, very thickly furnished with exceedingly lustrous, green leaves and it seems to adapt itself to almost any position in decoration that the Wild Smilax can be used in.

As the Introducer of Southern Wild Smilax, I think you can give me credit for knowing a good thing when I see it, and I am convinced that in Huckleberry Branches, you will have a very beautiful substitute for the Wild Smilax, of great value to you through the months of May and June.

I am anxious to get the Verdict of the Floral Trade on this introduction and offer to send you a Case on Suspicion, price $2.50 per Case if it suits you, nothing if it does not. Will you try a case on these terms?

Yours very truly

CALDWELL THE WOODSMAN

The Man who gave you the Wild Smilax

PORYZEES BURNED OUT

The retail flower store of Charles P. Poryzees, located at 1418 Chestnut street, Philadelphia, was totally destroyed by fire at about 2 A.M. Easter Sunday. Origin of fire unknown; but is supposed to have come from the adjoining cigar store. About one-fifth of the loss is covered by insurance. A large number of orders for delivery Easter Sunday were tagged and laid aside and these were totally destroyed, together with the order book. The resulting tangle and disappointment to customers is almost as bad as the monetary loss. The disaster could not have happened at a worse time and the sympathy of the trade for Mr. Poryzees is quite outspoken. Dozens of our prominent houses called him up on the telephone and offered assistance in merchandise, men or money, if either or all of these would be of any service. Mr. Poryzees is deeply grateful for this cordial feeling among his brother tradesmen and although he needs no assistance, he appreciates the good will none the less. The business is not interrupted as fortunately Mr. Poryzees has another store at 29 South 15th street.

CATALOGUES RECEIVED

I. N. Kramer & Son, Cedar Rapids, Ia. Illustrated catalogue of seeds and plants for 1905.

V. Lemoine et Fils, Nancy, France. Catalogue and price-list for spring and summer of 1905. Includes many promising novelties.

Chico Nurseries, Chico, Cal. Catalogue of fruit and ornamental trees, second edition. A comprehensive list; abundant illustrations.

Shatemuc Nurseries, Barrytown, N. Y. Select plants for the garden border. A tasteful illustrated pamphlet, listing both tender and hardy garden favorites.

Julius Roehrs Co., Rutherford, N. J. List of exotics, including orchids in immense variety, palms, bay trees and other specialties of this widely known establishment.

Frederic J. Rea, Norwood, Mass. Catalogue of hardy herbaceous perennials. Besides the usual list of popular favorites of the old-fashioned garden, many meritorious novelties are included.

Reading Nurseries, Reading, Mass. Fifty-first annual price-list of hardy trees, shrubs, vines, flowers, and fruits. A selection made with an intimate knowledge of the material, and one hard to beat. A useful book on the desk.

Furman Round Sectional Boilers. A description of the most recent type of the excellent heaters made by the Herendeen Mfg. Co., Geneva, N. Y. Illustrated and contains much valuable information. A copy may be had for the asking.

BUSINESS CHANGES

The greenhouses of George A. Black at Brighton, Mass., have been leased to I. M. Gauley.

Louis Villner has opened another store in Madisonville, O., in addition to his Walnut Hill's place.

W. C. Ross has disposed of his business and greenhouses at Wellsville, N. Y., to Yewdall & Boyce.

The Whitten estate in Dorchester, Mass., was recently sold at auction to the holders of the mortgage for $51,000.

The business of the late Mrs. S. L. Stebbins at Corry, Pa., will be conducted hereafter by Mrs. M. E. Caldwell.

Clucas & Boddington Co. are about to remove their New York establishment to very convenient and spacious quarters at 131 West 23d street.

The Yuess Flower Shop, with Oswald J. Cathcart as manager has opened at 91 Water Street, Newburgh, N. Y. The store is one of the finest in the state.

The Wasson Floral Co.'s greenhouses formerly located at Woodlawn, N. Y., have removed to Orchard Park, N. Y. Extensive improvements have been added and they now have every facility for growing cut flowers and vegetables.

P. Demas of Pittsburg Florists' Exchange has secured a lease on the whole building which had been partly occupied by him and had a force of men working night and day to get the place in shape for Easter. He is having erected one of the largest and widest ice boxes in the state, and when completed the establishment will be one of the greatest acquisitions to the newly widened thoroughfare of Pittsburg. Lowe & Jones of Diamond street have also to vacate their present stand and have not yet decided where their future location will be.

BUSINESS CHANGES IN CHICAGO

Harry B. Tufts is successor to Graff & Co. at 90 Washington Street.

Miss E. L. Drake of Minneapolis will open a flower store at 107 N. State street.

C. Brown, formerly of the Central Floral Co., opens his new store at 1272 E. Ravenswood Park.

Hillman's new State street department store is to have an up-to-date cut flower and plant department which will be under the able management of Robert P. Northam.

Julius Niesen bought John H. Holden's fine store at 753 E. 47th street. Mr. Niesen was for many years connected with E. Wienhoeber Co., and later with E. Asmus & Co.

Clipper Lawn Mower Co. DIXON, ILL.

The Mower that will **Kill all the Weeds in your Lawn** If you keep the weeds cut so they do not go to seed and cut your grass without breaking the small feeders of roots, the grass will become thick and the weeds will disappear.

The Clipper will do it. Ask your dealer for them. If they have not got them, below is the price: No. 1—12-in. Mower, $5; No. 2—15-in. Mower, $6; No. 3—18-in. Mower, $7; No 4—21-in. Mower, $8. Send draft, money order or registered letter.

In writing to advertisers, mention HORTICULTURE

WE OWN THE FIFTY MILLION DOLLAR WORLD'S FAIR

The Chicago House Wrecking Company purchased the entire St. Louis Exposition, with all its Millions of Dollars worth of equipment and supplies. This is an unequalled opportunity for Florists and Greenhousemen to secure equipment and materials for improvement at very low prices. It is all offered for sale from our Headquarters on the World's Fair Grounds.

Below we list some of the more important items:

BOILER TUBES. — Two carloads of 3½- and 4-inch good Boiler Tubes that have been used. We took these out of several boilers that we dismantled on the Exposition Grounds, and as they are practically as good as new, they are of special value. The ends have been cut square, they have been rattled and they are free from scales and imperfections. They are in long lengths. They are just what you require for extending your Heating System.

We furnish with these tubes at small cost wrought iron sleeve couplings threaded one size larger than the boiler tubes themselves. For large quantity orders we will make special low prices. At our Chicago Plant we have 200 carloads of such tubes for delivery.

GREENHOUSES. — We offer for sale the three complete Greenhouses used on the Exposition Grounds Each Building, 22 × 300 ft., with all latest improvements, double-strength glass, ventilating apparatus, Heating Plant, pipe, valves and fittings. Sketch and full information on application. We will sell these Greenhouses singly.

HOT BED SASH — 10,000, good as new, have heavy frame. Advise us how many you can use.

FLOWER POTS. — 20,000 Paper Flower Pots that have never been used. Low prices for quick delivery.

25,000 PLANTS. — All the Plants now stored in the Hot House are in first class condition They are being properly taken care of and consist of the following: — 500 Bay Tree Standard, in tubs, also Pyramid, 3,000 Crotons, 1,000 Large Philanthus, 1,000 Kentias, 600 Mixed Alternanthera, 2,000 Echeveria, 5,000 Solanum Hend, 5,000 Vinca Major, 5,000 Santolina, 200 Ammonium, 2,000 Matricaria, and thousands of others.

LUMBER. — 100,000,000 feet of Highly Seasoned Lumber ready for quick delivery. We are making extremely low prices in carload lots. If you are interested, send us your carpenter's bill for our estimate.

PIPE. — 10,000,000 feet of Standard Black Wrought Iron Pipe. It has seen service only during the Exposition. Sizes range from ¼- up to 42-inch. We can furnish you pipe of any kind. Write for complete list.

GREENHOUSE FITTINGS. — Anything needed in the line, as our stock is complete. Write us your requirements. We can furnish you valves, fittings, etc.

Thousands of other items: Garden Hose, Pumps, Step Ladders, Glass, Sash, Doors, etc., etc.

THE PIERSON-SEFTON CO.
Horticultural Architects and Builders
West Side Ave., JERSEY CITY, N. J.

We manufacture and erect every type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

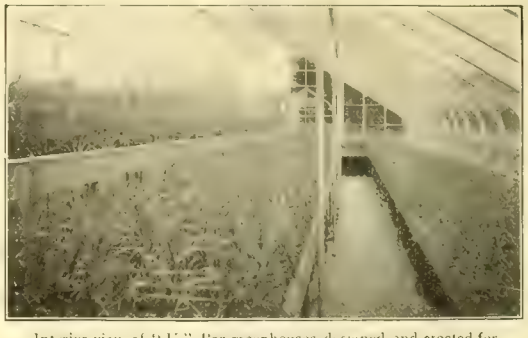
We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.



WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot-bed sash and frames. Special hand-made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

Exterior view of "U" Bar greenhouses designed and erected for Mrs. O. Thorne, Milbrook, N. Y.

Nephrolepis Barrowsii

Of all the new forms of Nephrolepis this is the

HARDIEST AND BEST

Fronds more dense, more finely pinnate of more massive and delicate effect.

Thrives in same temperature and under same conditions as the old Boston Fern. Having more fronds than any other form, well supported by stout midribs, it is of more shapely and bushy habit.

Very Dwarf and Compact

A decided improvement over other introductions and is admitted by the highest authority to be the

Evolution of the Grape

The grape is in the midst of an evolution. It is believed by scientists that the grape at some time in the distant past was a complete hermaphrodite, having the stamens and pistils in the same flower, but at the present time, both staminate and pistillate forms are found, and among the wild vines, the staminate form largely predominates and still oftener among hybrids. The cause of this change is probably due to climatic changes that render conditions less and less favorable to the life of the plant, and in the struggle for existence, and for harmony with existing conditions, the two are being established to divide the burdens between them. The production of pollen is very exhausting to a plant, and if that burden can be placed upon a separate vine, the pistillate vine is greatly relieved and it is probable that not so very far in the future the two forms will be entirely distinct, and if the increasing preponderance of the male form continues it may be viewed with not a little alarm as threatening the existence of genus vitis, or compel its propagation by cuttings.

Flower of Staminate Grape, Mammoth Cluster; Natural Size

Some years ago, the writer obtained one hundred vines from the seed of a wild Vitis Labrusca vine and seventy-five of them were staminate. Another experiment with hybrid seeds, seven out of eight were staminate, a close call to a clean sweep.

Many of the pistillate vines are now self-sterile on account of the impotency of their pollen, showing a tendency to the abandonment of the production of pollen entirely, while the pollen of the staminate vines is always perfect and potent. I have taken advantage of this peculiar condition of the grape and have produced a remarkably fine staminate vine, named "Mammoth Cluster," that has exceedingly large clusters of blossoms, as the accompanying photo indicates, which I use as a male parent, and I also have a self-sterile pistillate vine that I use as a mother vine. By that means the work of hybridizing is very much simplified. Still it is not all gain, as I get many more staminate seedlings than I would if I used pollen from a self-fertile vine.

Again it is very doubtful as to whether our fruiting vines can be indefinitely perpetuated by propagating from cuttings or slips, for I have on my grounds a vine that has fruited but three times in about forty years, showing that it has well nigh gone over to a staminate form. It blossoms full every year but the blossoms are all staminate except in the above mentioned cases.

R. B. White

Echoes from England

ENGLISH AND AMERICAN APPLES

A good deal of interest has been aroused by the publication of some correspondence on this subject in one of our gardening papers. The point of difference between the writers is as to the superiority of flavor between English-grown apples and those imported from America. Some go so far as to say that there is nothing to equal a Newtown Pippin after Christmas, for by then our premier apple, Cox's Orange Pippin, is past its best, and none other is as acceptable as the Newtown. Others assert that Cox's Orange Pippin (which every one admits to be unsurpassed during November and December) may be kept in good condition until now (the end of March), but even excluding this variety there are others better at this season than Newtown Pippin, for instance Claygate Pearmain, Sturmer Pippin and others. The editor of the journal referred to has received from several enthusiastic fruit growers, anxious to uphold the reputation of our late home-grown varieties, fruits of Cox's Orange Pippin which were as good practically as in December, and certainly to be preferred to imported Newtown Pippins. It seems to be largely a question of good and bad storage. If Cox's Orange Pippin is not carefully stored it loses its juiciness and that rich aromatic flavor which place it above all other dessert apples, and is only second-rate in the new year, certainly not equal to a good juicy Newtown. There is no doubt that the handsome appearance of American apples goes far to commend them to the British public, and their fresh looks probably accounts to a large extent for the manner in which they are preferred to late home-grown apples, which often are not to be compared with them, so far as appearance is concerned. If we could raise a few handsome, free-bearing late keeping apples of moderate flavor we should perhaps have some chance of competing successfully with American-grown produce, but at present we do not seem to have achieved this. Fruit growers in this country have tried Newtown Pippin, but it has not proved at all satisfactory.

DAFFODIL SHOWS

I do not know whether the narcissus is a very highly esteemed flower in America, but here we have special societies devoted to its welfare, and it has been brought to a high pitch of excellence. The Royal Horticultural Society has a Narcissus Committee, whose duty it is at the fortnightly meetings during March and April (the "Daffodil months"), to judge the numerous displays of this flower and to bestow awards upon individual varieties thought to be sufficiently good. Every spring numerous new varieties are raised and some of them are extremely beautiful: they have been greatly improved in form by the hybridist and he has blended colors most exquisitely in some of the newest sorts. A sensational flower raised and shown by Messrs. Barr and Sons, of Covent Garden, not very long ago was a white trumpet daffodil, called Peter Barr. This was catalogued at 50 guineas a bulb, and now I believe is little if any less in price. Daffodils and tulips are most successfully grown in some parts of this country, for instance, in the lowlands in the eastern counties, where conditions are not greatly dissimilar from those prevailing in Holland — the greatest bulb producing country in the world.

In these English counties you can see acres of narcissi and tulips and they vie in beauty with the wonderful bulb farms of the Dutch. We have several important societies throughout the country devoted solely to the daffodil and a few other spring-flowering bulbs, and they hold exhibitions in the spring; at these the rarest and newest beauties are to be seen.

A NEW SMILAX

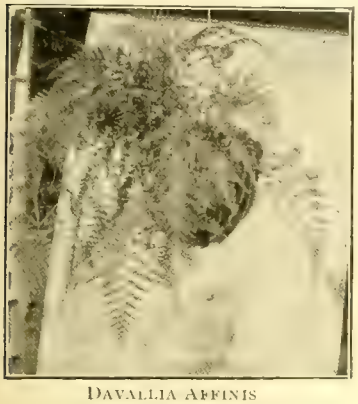
The common smilax (Mediola asparagoides) is I believe as popular a market plant in America as it is in this country. A new variety called myrtifolia, much more graceful than the type is increasing in popularity and will no doubt, when better known, be largely grown. If I remember rightly this is of American origin, but of this I am not sure. Messrs. Hugh Low & Co., Bush Hill Park Nurseries, Enfield, London, introduced it into this country and they have been instrumental in distributing it. The West End florists are taking it up, and prefer it, on account of its light and graceful foliage, to the ordinary smilax. It shows to great advantage in dinner table decoration.

NEW TREE CARNATIONS

The hybridist appears to have been busy among these lately for several new varieties have been shown quite recently. Flamingo was the name of a rich red variety that obtained a certificate from the Royal Botanic Society last week and to-day Messrs. Hugh Low & Co. showed a beautiful rich pink called Fascinator. It is something like Enchantress, but it is a richer color and has a fuller center. Coronation is the name of another new one, worth mentioning on account of its almost smooth petals, in contradistinction to most others which have fringed petals. Mrs. Lawson, America, and other well-known sorts are as popular as ever. There is nothing to excel Mrs. Lawson for bright, rich coloring.

A PURPLE CYTISUS

Cytisus purpureus is not nearly so common as its yellow-flowered relatives, and for this reason is worth culture. I have never seen cytisus in pots in finer condition than were shown to-day in the Horticultural Hall by Messrs. Cuthbert, Southgate, London, N. W. It was a variety of Cytisus purpureus called incarnatus: it bears light purple flowers similar to those of Cytisus purpureus, but they are finer and most freely produced. Plants in pots of only 6 or 7 inches in diameter carried 20 shoots each one of which was almost smothered with flowers. Such a free-blooming plant ought to be valuable for market culture.



Harry H. Thomas

London.

Ferns for Every-Day Use

DAVALLIA

This is one of the most interesting, picturesque, and ornamental genus of the fern family on account of the scaly, creeping rhizome of most of the species, and the gay green color of the finely divided solid fronds; geographically they are widely distributed and, to be grown with success, require stove or greenhouse protection. Those with apparent rhizomes do well in hanging baskets, on rocks, on old fern or other tree trunks and other material which their rhizomes can grow over. When grown in pots, the pots must be nearly half-filled with crocks or broken bricks and the plants set higher than the pot-rims in a mixture of fibrous peat or good sandy leaf mould mixed with chopped sphagnum. It would be injurious to bury the scaly rhizomes in the soil. They must be well-watered during the growing period and sparingly in winter, but never allowing to let them dry off, for then the next growth would make short fronds. They like to be near the glass where they can get all the light, and do not like to be syringed overhead. Those with underground rhizomes like a good light fern soil.

DAVALLIA AFFINIS

They are propagated by division of the rhizomes or by spores. The spores grow in little bags of different forms, open at the top and found at the edge or near the edge on the under surface of the fronds. Sometimes they are very apparent, the involucre being bordered red or brown. The section with overground creeping rhizomes is the most numerous and contains good hardy plants. When once established those hairy or scaly colored rhizomes which are the great ornament of these ferns can be cut back, when grown in pots, to make the plants grow more bushy. The best are the following:

DAVALLIA BULLATA

Davallia affinis from the South Sea Islands has fronds one to two feet long, half as broad and finely divided and sharply toothed on long slender stalks; the much creeping rhizomes are clothed with rusty-colored scales.

D. bullata is the "squirrel's foot fern" from Japan from which fern balls and other designs are made. In natural cultivation the fronds grow much bigger.

D. Canariensis from southern Europe and northern Africa is the "hare's foot fern," one of the best known and an old favorite if not the first in cultivation. The knotty rhizomes are very apparent, thick, covered with small pale brown scales, like D. bullata. Does not require much heat, and one of the most desirable for dwelling rooms.

D. dissecta or elegans dissecta from Java and the Malayan archipelago is one of the best for decorative purposes. From a scaly, rusty-colored rhizome, grow in abundance, large, one and a half feet long, light green fronds, well divided.

DAVALLIA CANARIENSIS

D. divaricata or polyantha, from north India is one of the biggest growing; the fronds, two to three feet long are triangular and of claret-red color when young, turning to bronze and then deep shining green when ripe. Those three colors can be seen nearly all the year round on the plant, giving a very pleasing effect. It has a knotty, thick, rusty-colored, scaly rhizome.

D. Fijensis from Fiji Island is a well-known species. The fronds are the most finely divided of all the davallias and of strong texture; the rhizomes are thick and straight-growing, covered with small, gray scales. D. F. major, elegans, and plumosa are very nice forms from it, the first more robust growing, the other more finely cut; plumosa especially has the fronds large and drooping; the linear divisions are very finely divided.

D. hirsuta and D. Mariesii, both from Japan, are dwarf species, the spear-shaped fronds seldom one foot long; they are finely divided and the long, slender creeping rhizomes are used the same way as bullata for fern balls.

DAVALLIA FIJENSIS

D. Mooreana or D. pallida from Borneo, is one of the best known and most cultivated. The pale green, robust fronds are two to three feet long, long-stalked and triangular in form, the pinnules are wedge-shaped and lobed at the top. The rhizomes are thick, creeping and covered with brown-colored scales.

(To be continued.)

Pelargonium Ivy-Leaved

Ivy-leaf pelargoniums are very decorative greenhouse plants. Being adapted to various methods of training, they can be used to good advantage and with excellent effect in many ways. In large vases for out-door embellishments, planted around the edges of such vases where they droop over the side, and in combination with other plants of an upright habit, they make a splendid showing. For suspended baskets in the conservatory they are particularly charming when in flower; yes — and even out of flower, their glossy dark-green leaves being quite attractive.

Trained on trellises of conical form or other shapes, they make objects of great beauty. I recall with much pleasure and not a little pride a dozen plants I used to have annually thus trained a number of years back, bristling all over with massive flower trusses, standing three and one-half to five feet high. Plants of this description for exhibition or any purpose are calculated to excite admiraton.

In order to accomplish pyramids of this size plants must be kept over for several years, partially drying them off in early fall, but never to the extent of shriveling the vines. I used to keep them in this semi-dormant state up to the latter part of January. When more water was given they soon started and broke freely thereafter, covering the trellises with luxuriant green foliage and vine in a short space of time; they flowered in May and June.

Planted out in convenient places in the greenhouses and trained vertically to wires, they not only make an object of beauty to look upon but are exceedingly useful for cut-flower purposes, as longer stems are produced to the flower trusses thus treated. They are also very effective in clothing pillars and such other bare and objectionable features. They are likewise excellent subjects for bedding-out purposes; pinned to the ground after the manner that verbenas and similar rambling characters are treated, they are extremely pleasing. While the best results are always to be looked for by treating them with the best material obtainable in the shape of soils and ingredients to enrich the same, they are by no means dainty as to requirements in this respect.

Large plants can be grown in comparatively small pots, that is, the larger plants ought to look beyond all proportions to the pots they may be grown in; for they are much easier carried over from year to year thus. Pots commensurate with the size of plants as applied to most other plants, do not apply so forcibly to any of the geranium family, especially in the stages of development that I have in mind, which is the flowering and old-age stages. I must not be understood by the readers of this article as advocating cramped quarters while the plants are young and going through the formation stage.

Thirty or less years ago there were no so-called double varieties, but nowadays there are more doubles than singles apparently. I will now mention a few of the very best varieties of the latter that came under my own observation, following the order of excellence, as they appealed to my own taste. I believe in doing this that I will render greater service to the young beginner than if I attempted further cultural details. Souvenir de Charles Turner is a splendid variety, deep rose-shaded amaranth. Ryecroft Surprise, pleasing shade of salmon-pink — a sport of the former if my memory serves me — a sturdy grower and altogether a superb variety. Galilee, beautiful clear rose of strong habit. Eden Marche, similar in color to the latter but somewhat deeper shade of pink. Madame Thibaut, rich carmine rose. Madame Crousse, flowers very large, semi-double, delicate rose, veined in the upper petals with deep maroon. Sarah Bernhardt, large flowers, white upper petals feathered maroon. Jeanne d'Arc, white suffused with lavender on opening. Emile Lemoine, rich orange scarlet, fine. Josephine von Hohenzollern, large, dense trusses of very double flowers of a bright, cherry-crimson shade. Leopard, of recent introduction, semi-double, flowers large, lilac-pink ground blotched with carmine and grayish white. Newton, flowers large semi-double vermillion red.

E. Findlayson

Cypripedium Hybrids at Whitinsville

Besides the many fine plants of insigne and other well-known varieties of cypripediums grown here Mr. McWilliam has raised and flowered over two hundred seedlings, for some of which he holds five silver medals and several first-class certificates awarded by the Massachusetts Horticultural Society. Over thirty types of Leeana have already flowered; some of them are clear light and others have darker shades of yellow; some have no spots, others beautiful bars of brown. Many of this type have the blood of old insigne in them, and many have not yet flowered. Other crosses, one × Lawrenceana and Philippiensis, named Hobsonii, is of robust growth, and has quite dark-barred flowers on strong stems; another Isabellæ, is × between Spicerianum and niveum, very fine; one, Mme. Gabrielle Moen, × between callosum and Spicerianum, is also good. There are many other crosses which, when they come to flowering age, will no doubt be worth notes and find honorable places among their distinguished fellows in the plant world.

Wm Swan

Do You let Them Know It?

Nothing except the mint can make money without advertising. — *Gladstone.*

When you pay more for the rent of your business house than for advertising your business, you are pursuing a false policy. If you can do business let it be known. — *Franklin.*

"By George, I'm slower than a funeral about that 'ad.' in the *Bellview Mirror!* I intended to put it in a month ago to tell the suburbanites that I not only know how to grow roses and carnations, but am also the man they want to fix up their grounds. Somehow it has been overlooked and I believe I am losing business through this oversight; but I'm going to drive over there and put it in this very day."

This was said to me by a florist early in March, and I am now informed by him that the results of that publicity have been highly gratifying; that he has had several good sized contracts and a whole lot of small jobs.

Now — how many local growers are missing just such opportunities? I believe many of them are. Of course, all do not have ability in that special line; others are too big to bother; but when both these ends are lopped off there still remains a solid mass who could add to their incomes without encroaching in the least on their cut-flower trade, whether same be wholesale or retail.

A subscriber told me the other day that what he especially liked about HORTICULTURE was its suggestiveness in a business way. It inspired one to think how he could apply propositions to his own case. This matter of local advertising is an instance in point and I believe many could profit by it.

In this connection I want to call attention to the local advertising of two of our Philadelphia seed houses.

These examples are typical of good matter well displayed and might serve the suburban florist as a model for what he has to say to his neighbors. Mr. MacKubbin is the Dreer advertising expert but in this instance he tells me that all the local "ads" were written and placed by H. I. Ireland. They are well done and Mr. MacKubbin says the results have been very gratifying. We have not had an expression of opinion from Mr. Michell, but the fact that he keeps it up year after year and that he is now doing one of the finest counter trades in the country, speaks well for the idea and its execution.

While I'm on this subject of advertising I want to add a word to the man who has a surplus of something. Nine times out of ten some one, somewhere, will be short of just that thing and a card in HORTICULTURE is the quickest and cheapest way of connecting. This is an entirely different matter from general publicity advertising. The latter is intended for business building in a general way — making people familiar with the name, and may be regarded more as an investment than an expense, while the special surplus card is meant for immediate results in a temporary sense only.

A Success from the Start

ADVERTISERS are finding out that HORTICULTURE PAYS THEM WELL.

Did you ever know of a weekly paper that carried so much advertising and had so many advertisers during its first five months? The reason is plain. The horticultural profession was ready for just such a paper as we have been giving them.

If you want to do business with the intelligent and prosperous horticulturists of to-day, You Can't Afford Not to Advertise Regularly in HORTICULTURE.

Dear Sirs, — Please discontinue my advertisement, as I have sold out all the stock. The large number of replies I received testifies to the value of your paper as an advertising medium.

Yours,

F. E. PALMER.

It is a pleasure for us to say that the results from our advertising in HORTICULTURE have been eminently satisfactory, not only in the number of inquiries received, but in direct sales as well. We congratulate you upon the strong showing you are making.

Very truly,

THE DINGEE & CONARD CO.

West Grove, Pa.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The evident tendency in the direction of fewer ribbon and other artificial decorations on Easter plants which has been generally noted this year will be pleasing news to all who adequately appreciate a plant for its own sake. This is but the natural rebound from an overdone fad, for such things done to excess never last long. But a further and more creditable reason for the reformation is undoubtedly to be found in the superior productions of our advancing plantsmen, which no longer require flounces to hide their imperfections.

We learn from the New York daily papers that, on account of the death of a number of the large elms on the Mall in Central Park within the last two years and the sickness of many others, a committee of "public-spirited women of the west side has undertaken a fine work of civic patriotism — the saving of trees in the parks." The cause of the dying is represented to be lack of proper nourishment, and the remedy prescribed is a renewal and enrichment of the "thin and exhausted soil" in which the trees are planted. In a column article the *New York Times* of April 9, tells us that Mr. Samuel Parsons, Jr., the city landscape-architect, asserts that unless "drastic methods" are at once instituted, death for the worn-out Mall elms is imminent — said drastic methods to consists of the putting of two feet of new earth over certain parts of the park — and that the 10,000 cubic yards of mold available for the purpose is wholly insufficient. He places the burden of the blame for these deplorable conditions on the park commissioners of many past administrations.

All of the above seems plausible enough until we open the volume of the proceedings of the Park Board of the city of New York for the year 1902, and read from the report of Hon. William R. Willcox, president of the board, and commissioner of parks for the Borough of Manhattan and Richmond, as follows:

"During the summer inspections convinced me that the plantations in the Central Park had been deteriorating for a number of years past, owing to improper treatment, and that many of the trees had become diseased and infected with fungi, owing to neglect in properly covering places where limbs had been sawed off. In order that the matter might be fully investigated and the Department advised intelligently as to the best course to pursue, in September I requested Dr. N. L. Britton, Director of the New York Botanical Gardens; Dr. B. E. Fernow, Director Demonstration Forests of the New York State College of Forestry, Cornell University; Mr. J. A. Pettigrew, Superintendent, Department of Parks, Boston, Mass.; to act with Mr. Samuel Parsons, Jr., the Landscape, Architect of this Department, as a Commission to examine into and report upon the natural conditions in the Park. Messrs. Britton, Fernow, and Pettigrew promptly agreed to serve on such a Commission, and offered their services without compensation to the City, taking the attitude that the preservation of the Central Park was a matter of interest to the whole country."

The report of the special commisson thus constituted was rendered October 13, 1902. It stated, in brief, that adequate tests showed the soil to be deep, of good character, and well-suited for producing fine trees, and that sufficient good soil had been used in the original grading operations. The commission attributed the present condition of the trees in Central Park to "the lack of thinning out," cuts of branches improperly made and left unprotected against infection by fungi which "had obtained access through unprotected pruning scars, causing wide-spread rot in the trunks and branches," and to more or less danger by ice and wind storms. That portion of the report covering the condition of the shrubbery plantations was in a similar vein.

The recommendations of this committee of experts included a thinning out of all surplus, unsuitable and diseased trees; competent pruning and proper protection of cut surfaces, allowing fallen leaves to lie in the woodlands; regular applications of manure and commercial fertilizers to the groves, plantations and lawns; the addition of top-soil in certain limited areas in which the rock comes close to the surface where shrub planting is to be done, and in some of the existing delapidated shrubberies; and the spading in of four inches of manure, mixed with potash, on the Mall. This report is signed by the three members of the Commission and by Mr. Samuel Parsons, Jr. Will Mr. Parsons kindly give the reasons for his changed views and explain how it can be that the lapse of two and a half years has worked such an astounding depreciation in the character of Central Park loam? In asking Mr. Parsons this question we feel sure that we voice the sentiment of a host of friends of the Central Park trees, for Mr. Willcox is quite correct in his observation that anything which concerns the welfare of Central Park is of deep interest to the whole country.

After Adjournment

DISILLUSIONIZED

Of hard-earned coin a fellow now depletes his little hoard
To get the seed to raise some "sass" to grace his humble board;
O'er many a glowing catalogue with care he pores and looks,
Rejoicing in the things that bloom in all the seedsmen's books.

He sees a wood-cut of a beet that dwarfs a full-grown pig,
While on the next page looms a squash some twenty times as big;
At least they such proportions have in his astonished eyes,
But when they're grown, alas, he finds they're but the usual size.

He sees some cuts of peas and beans some pages on displayed
That throw the beanstalk raised by Jack completely in the shade;
But when he harvests later on these monstrous beans and peas,
He finds that quite a little lad can lift a pod with ease.

And so it goes with everything; the while his crops are good
They do not make the neighbors stare as he supposed they would,
And he at length this lesson learns and learns it well, gadzooks!
One must not hope to raise such stuff as grows in seedsmen's books. — *Daily Paper.*

Nonsense! If you're half a man you can grow better stuff. What wood-cut can reproduce the dazzling brilliancy of a peony, the marvellous colors and convolutions of a rose, the fragrance of the daffodil or the perfume of the violet? "Gadzooks," indeed! The seedsman's book 's but a poor thing when one comes to comparing it with Madame Nature's handiwork. Besides one does not raise "garden sass" mainly to make the neighbors stare. Disillusioned one may be, but it does not follow that there's anything wrong with the puny attempt of the seedsman to interest one in the wonders of the universe.

The *Newport Herald's* report of the Easter trade has it that flowers and plants were scarce and high in Newport because the growers had to burn extra coal and that in New York and Boston the reports of a scarcity were heard as well. Sounds funny, doesn't it?

We are duly proud to learn that our prized correspondent, H. H. Battles, of Philadelphia, had been commissioned to prepare an article for the *Ladies' Home Journal* for June. We congratulate Mr. Battles, we congratulate the *Ladies' Home Journal* for its excellent judgment, and of course we congratulate HORTICULTURE which also knows when it has something good.

The *Boston Globe's* "private wire" is working again. This time it introduces an eager public to a man in Passaic, N. J., who has discovered an elixir that will bring a dead plant to life in two weeks. By means of "certain chemicals" a dead geranium plant is "completely regrown and reflowered in two weeks." If this happened anywhere but in New Jersey we should be surprised.

The Connecticut newspapers are telling us that "Professor" Farquahar of Boston will deliver the next address before the New London County Horticultural Society. Our genial friend will, no doubt, look askance at this unsought title. As for us, we'll still call him "Mr." as one who

"Needs not the foreign aid of ornament,
But is when unadorned, adorned the most."

What became of the plants left over from Easter in the retail stores? Don't imagine hey were lost, do you? Why, bless your dear worried soul, the weddings began to reel off almost before sun-up on Monday morning. What finer church adornment than lily plants, astilbes, daisies, and white azaleas against a background of palms? No, the retailers who bought freely and took chances didn't get left; neither should they!

The *Brooklyn Eagle* has compiled a lot of sensational matter and worked it up into a shocking tale of the very poisonous qualities of primroses, oleanders, chrysanthemums, arbor vitæ, clematis, and Crimson Rambler roses, and the danger of handling these things or having them in the house. Incidentally it mentions that there are several poisonous species of rhus, which " are not necessarily dangerous and rarely cause irritation, the exceptions being in persons with a predisposition toward plant poisoning!" They're at it again.

PHINEAS AND HIS FANCIES

Phineas thinks the way to do a thing is to do it. No plow will run of itself. Get busy. The rose men are waking up. Now for the 'mum, the Iris, and the peony.

Be cheerful. No good can be accomplished by running down the other fellow. Metaphysicians can pull down anything; but they never built up a church, a State, or a business. It takes enthusiasm and cheerfulness to accomplish something useful. Witness the S. A. F. and the Carnation Society.

In the school you can get learning, but it takes wisdom to apply it. I would rather have the man who can build me a wheelbarrow than a useless fellow, an adept at the differential calculus. In other words, hand and brain must go together. You can tell a man how to grow a crop of roses, but it isn't every one who understands what he is told.

It is a good thing now and then to buy some of the new things even if it be only to infuse new blood into our own stock. No one knows it all and no one can claim to have the best of everything. The more one comes to realize this, the nearer will one be to knowing the most and having the best. Watch people like Dreer, Dingee & Conard, Ward, Hill, Vaughan, Henderson, and other leaders. They are constantly on the alert and constantly testing and comparing. Would Burpee, Maule, Thorburn, Farquhar, Ferry, and the rest of them be in their present commanding position if they had been con tent with what their fathers taught them? Of course not. The engineer is indispensable but how about the look-out-man?

Carnegie stares at the way the country has grown up. So do the florists. Fifteen years ago we thought one trade paper was enough to cover the field. Now we have four of them, and the latest — HORTICULTURE — is the brightest and best of them all. To keep track of current news and experience we must read them all, but especially HORTICULTURE. Each has some individuality of its own, but for conciseness, distinctiveness, and brilliancy the youngest has them all distanced.

I often wonder at the obtuseness of the grower who does not keep constantly in touch with his commission man as to what he is likely to be able to supply a week ahead. If he could see the orders that are turned down to-day, and hear the commission man's wrath tomorrow (when the growers ship that very thing) it would be an object lesson to the latter he would not soon forget. *

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

W. C. Stickel of Lexington is erecting a new house, 30 × 100. A. T. Stearns Co. of Neponset is furnishing the lumber.

Mr. Henry Penn, our genial Bromfield Street florist has our sympathy in the loss of his father who died Tuesday evening, May 2.

At a meeting of the Music Hall Market Growers, Saturday, April 29, a base ball team was organized with James Rough, Jr., as manager, and Thomas F. Matthews captain. Interest in this sport is gaining a strong foothold and the team can count on the hearty support of the growers as a whole.

The following challenge is issued:

TO THE GROWERS OF PARK STREET FLOWER MARKET, BOSTON: Being duly authorized, we wish to challenge a ball team representing your market to a game or series of games this summer for the championship of the Wholesale Flower Markets of Boston. Time and place of games to be decided later.

JAMES ROUGH, JR., *Manager,*
THOMAS F. MATTHEWS, *Captain.*

Unless we have some copious rains shortly, much irrigating will have to be done this summer. Carnation growers are making all haste to get their young plants out in the field to get the benefit of the small amount of moisture remaining in the ground. The cold, raw winds of the past few days have had an ill effect on young plants already out.

THOS. F. MATTHEWS.

WHOLESOME CHESTNUTS

Plant fruit trees along walls and high fences. Cover tree stumps and other unsightly objects with vines and climbing or rambling roses.

Plant a few trees wherever you can; "they'll be growing when you are sleeping."

Buy only clean trees and if they are not clean when you get them, the chances are they never will be, so send them back.

Keep the hoe going in the seed rows. Next to a warm shower, a stirring of the soil is the best tonic for young plants, or for old ones either.

To guard against mildew on grape vines, dust the pipes with sulphur; dampen the pipes beforehand.

Don't let crotons or dracænas get dry; they ought to be growing rapidly now. Slightly shade crotons with something you can easily rub off, when you want the plants to color.

Plant early celery. Sow sweet corn and string beans. Keep up a succession of radish, lettuce, peas, cauliflower, and spinach.

DRUG STORE COMPETITION

A subscriber writes to us in protest against the practice of his fellow-florists of selling plants and flowers to druggists who sell them at cost to draw trade to their stores and thus lower the standard of value and injure the regular dealers. We doubt if any remedy for this evil is in sight. It is only a repetiton of what florists in every community have had to contend with in one form or another, from the beginning. Our columns are open, however, to any correspondent wishing to make use of them to present his views on this question.

NEWS OF THE CLUBS AND SOCIETIES

TARRYTOWN HORTICULTURAL SOCIETY

The regular monthly meeting of the above society was held on Tuesday evening, April 25. The prize for this month was given for the two best plants of calceolaria. There was quite a keen contest and, after considerable deliberation, the judges awarded the prize to Wm. Scott. Only a short business session was held and the meeting was adjourned to allow the members to attend the lecture given by Professor George T. Powell in the lecture room of the high school. This lecture was held under the auspices of the society, open to the public, and there was a good attendance.

Professor Powell gave a very learned and instructive lecture on the propagation of trees and the cultivation of roses. A number of excellent drawings were used for illustration. On the subject of trees he spoke chiefly on the fruiting kinds, and dwelt mainly on the careful selection of stock, illustrating very clearly the advantage of a healthy parentage by showing the free-growing and free-fruiting qualities of plants taken from such in comparison with plants propagated from unhealthy trees or trees of undesirable habit. In that part of his lecture devoted to roses he gave a lengthy description of soils. Soil of a rather heavy clay nature he considered most suited to their best development. He advised against a very general mistake — that of planting roses too shallow. He advised to plant grafted roses so that the graft would be at least three inches below the surface. In conclusion he gave some advice regarding the destruction of San José scale and strongly advised concerted action in fighting it.

WM. SCOTT, *Cor. Sec'y.*

EXHIBITION AT BOSTON

The exhibition of the Massachusetts Horticultural Society on Saturday, April 29, was notable for a number of features, especially the calceolarias and show pelargoniums which were unprecedentedly fine. They were shown by George Stuart, gardener to George F. Fabyan — the same grower whose cyclamens made such a sensation among the visitors to the spring show in March. Professor A. J. Pieters, of the Department of Agriculture, Washington, was present as a visitor and was particularly impressed with these superb calceolarias. A plant of Impatiens Holstii from Robert Cameron, Botanic Garden, Cambridge, created a genuine sensation not alone because of its fine color and free-flowering, but from the fact that it was raised from seed sowed early in January. Its possibilities as an Easter plant impressed all. A new cucumber, Metcalf's Model, by C. H. Metcalf, was freely commented on as the best cucumber ever seen in any exhibition here; dark green in color and perfect form. The profuse display of daffodils usually seen at this exhibition was not in evidence. The season is too backward and daffodils are only commencing to bloom. Certificates of merit were awarded to Robert Marshall, gardener to E. W. Converse, for superior cultivation of Amaryllis vittata, Thomas T. Watt, gardener for Mrs. H. F. Durant, for superior cultivation of Saccolabium ampulaceum and Robert Cameron for Impatiens Holstii.

AMERICAN ASSOCIATION OF NURSERYMEN

Program for Thirtieth Annual Meeting to be held at West Baden Springs, Ind., June 14, 15, 16, 1905.

WEDNESDAY MORNING, JUNE 14, 10 O'CLOCK.

Calling to order, President W. W. Kirkpatrick; Texas.
Welcome to Indiana, Andrew J. Rhodes, Indiana.
Response for the Association by the President.
President's Address.
Reports of Secretary and Treasurer.
Reports of Committees on Tariff, Legislation, Freight Classification and Transportation.
Discussion by G. L. Taber, Florida, and members.
"The Cost of a Tree," Harry L. Bird, Michigan.
Discussion by Aubrey Frink, Florida; J. Horace McFarland, Pennsylvania; Herbert S. Chase, Alabama, and members.
Nomination of State Vice-Presidents.

WEDNESDAY AFTERNOON, 2 O'CLOCK

Election of State Vice-Presidents.
"Grading Nursery Stock," L. A. Berckmans, Georgia.
Discussion.
"The Low Prices of Ornamental Stock," Charles Maloy, New York.
Discussion.
"The Grape, the Commercially Neglected Fruit," T. V. Munson, Texas.
Discussion.
"Experimental Orchards for Nurserymen," L. C. Corbett, U. S. Department of Agriculture.
Discussion.

WEDNESDAY EVENING, 7.45 O'CLOCK.

"A Tree Garden to Last a Thousand Years" (stereopticon), J. Horace McFarland, Pennsylvania.
Discussion by J. Woodward Manning, Massachusetts, and members.
"Soil Inoculation" (stereopticon), Dr. George T. Moore, U. S. Department of Agriculture.
Discussion by J. H. Hale, Connecticut.
QUESTION BOX. — Questions will be received by the Secretary or the Chairman of the Program Committee until Thursday P.M. and will be answered on Friday.

THURSDAY MORNING, JUNE 15, 9.30 O'CLOCK.

"The New Horticulture," H. W. Stringfellow, Texas.
"Best Methods of Improving Our Standards in Trees, Fruits," G. L. Taber, Florida.
Discussion by Members and W. O. Reed, Indiana.
"Quality *v.* Quantity," Prof. John Craig, New York.
Discussion.
"Plants in Department Stores," Howard A. Chase, Pennsylvania.
Discussion.

THURSDAY AFTERNOON, 2 O'CLOCK.

"Office Management," Thomas B. Meehan, Pennsylvania.
Discussion by Charles J. Brown and William Pitkin, New York.
"The Fruit Exhibit at the World's Fair," William B. Stark, Missouri.
Discussion by J. S. Butterfield, Missouri, and members.
Annual Meetings of the American Nurserymen's Protective Association and the Nurserymen's Mutual Protective Association.

THURSDAY EVENING, 7.45 O'CLOCK.

Executive Session. Members Only Admitted.
"Picking, Packing, Grading, and Shipping Fruit" (stereopticon), J. H. Hale, Connecticut.
Discussion.
"Crown Gall and Root Knot" (stereopticon) George G. Hedgcock, U. S. Department of Agriculture.
Discussion by C. L. Watrous, Iowa; J. H. Hale, Connecticut, and members.

FRIDAY MORNING, JUNE 16, 9 O'CLOCK.

Election of Officers.
Selection of place for next Convention.
Appointment of Committee on Resolutions.
New business.
"Refrigeration of Nursery Stock and Storage in Cellars," Madison Cooper, New York.
Discussion.
"Excluding Advertisements Quoting Prices," J. M. Irvine, Missouri.
Discussion by Theodore Smith, New York.

FRIDAY AFTERNOON, 2 O'CLOCK.

"The Evolution of Importing," James McHutchison, New York.
Discussion by Hiram T. Jones, New Jersey; Andre L. Casusse, New York; F. L. Atkins, New Jersey.
Answers to Questions deposited in Question Box.
Reports of Committees on Exhibits, on Final Resolutions, on Program; and Announcement of Committees.
Adjournment.

FRIDAY EVENING, 7 O'CLOCK.

Fruit Banquet. — J. H. Hale, Toastmaster. There will be dancing after the banquet.

SATURDAY, JUNE 17.

Special Excursion to Mammoth Cave, Kentucky.

GARDENERS' AND FLORISTS' CLUB OF BOSTON

Members of the Gardeners' and Florists' Club of Boston to the number of forty-five, visited, on invitation, the extensive flowerpot manufactory of A. H. Hews & Co., at North Cambridge, on Saturday, April 29. They were escorted through the different departments and shown the interesting processes whereby crude clay is transformed by the potter's art into the various forms and sizes of pottery ware. The most modern machinery and skilled labor are the foundation of the world-renowned goods turned out by this mammoth establishment which is now over one hundred and forty years in existence. The Hews pottery was established some time prior to 1765 in the town of Weston, and ever since has been carried on by some member of the family until its late incorporation. Mr. A. H. Hews whose death occurred in July, 1903, was of the fourth generation from the founder of the pottery. He is held in loving memory by the employees, and the same spirit of genial courtesy which the visitor met when he was the directing genius of the establishment is still characteristic of the place and the gentlemen who represent it at home and on the road. A generous collation was served to the Boston party by the ladies of the office, and in closing the delightful occasion, a hearty vote of thanks and three cheers for their hosts were given by the visitors.

NEWPORT HORTICULTURAL SOCIETY

Mr. Alfred G. Vanderbilt has manifested his interest in the coming exhibitions of the Newport Horticultural Society by offering a special prize of $25 to be competed for in August. Miss Alice Keteltas writes from New York to the effect that the cup she is to offer as a first prize for a gateway decoration at the June exhibition is at Tiffany's awaiting the inscription. Mr. F. P. Garrettson writes saying he will gladly give a prize for anything suggested by the society.

HORTICULTURAL SOCIETY OF NEW YORK

The fifth annual exhibition of this society will be held in the Museum Building of New York Botanical Garden at Bronx Park on Wednesday and Thursday, May 10 and 11. A list of prizes offered by the managers of the Botanical Garden has been published and may be had on application to Leonard Barron, 306 West 149 street, New York City.

Our Frontispiece shows the interior of one of Julius Roehrs Company's phalænopsis houses at Rutherford, N. J. The view was taken early this year. In sight are P. amabilis, amabilis Rimestadiana, Schilleriana, etc. To say that it is a beautiful show is "putting it mildly."

Obituary

JAMES ROUGH

It comes to us as a very sad duty to record the death of James Rough, of Boston, who

died on Tuesday night, May 2, after a ten days' sickness with pneumonia. Good and kind-hearted, jovial and companionable, Mr. Rough was held in loving esteem by a host of friends of many years and deepest sorrow prevades the community where he has so long been active in the business and social life of the craft.

Mr. Rough was born in the suburbs of Glasgow, Scotland, 57 years ago. At the age of 25, he came to the United States and entered the employ of Mrs. John L. Gardner, under the late C. M. Atkinson who was then head gardener of the estate. He stayed there about a year, and then entered the store of the late Alexander Greenlaw, florist, on Washington street, Boston. After five years service at this stand he went into business for himself, establishing a store on Washington street, near West Newton, where he remained until four years ago when he moved to the corner of Huntington and Massachusetts avenues. Mr. Rough was a great lover of animals and had at the time of his death, some fine dogs, pigeons, and golden pheasants. He leaves to mourn his loss, two daughters, Misses Mary and Nellie, and one son, James, who is manager of the Music Hall Cut-Flower Market.

FRANK A. PIERSON

Frank A. Pierson died at his home in Cromwell, Conn., Saturday evening, April 29, after one week's illness. He was taken suddenly ill on Saturday evening, April 22, and on Sunday his case was diagnosed as spinal meningitis, and he gradually failed until he passed away.

Mr. Pierson was 28 years of age, and was born in Cromwell, the son of A. N. Pierson. From a boy he took an active interest in his father's business.

Mr. Pierson had served as selectman of the town of Cromwell, and last fall was elected as a member of the General Assembly by the Republicans.

He was of jovial disposition, popular with all classes, and his sudden death will be generally regretted by many social friends as well as by those in the profession, which he honored and which has sustained an irreparable loss in his death. He leaves a wife and one child.

HENRY H. GOODELL

President Henry H. Goodell of the Massachusetts Agricultural College died suddenly April 23, while on his way home from Florida,

where he had been for his health the past winter.

As a member of the Massachusetts State Board of Agriculture he has done much for the horticultural and agricultural interests of the country. He was director of the Hatch Experiment Station, and president of the Massachusetts Agricultural College since 1886.

In the latter capacity he has done much to further the interests of the college, particularly during the past few years when the success of the institution depending on its agricultural basis, he developed and strengthened this foundation. He was especially interested in the horticultural side of the work and the founding of the landscape-gardening branch was due to his efforts.

Especially noticeable was his desire to furnish opportunities for young women to study horticulture, agriculture, and allied subjects. Not only did he exert his influence towards providing special courses for them at M. A. C., but also worked hard to arrange for coöperative work between that institution and Simmons College of Boston.

Never forcing himself prominently into public view, he accomplished a great deal in his modest, unassuming way.

THOMAS CAPERS

Thomas Capers, florist, of Newburyport Mass., died on April 29, at the Anna Jaques hospital where he had been operated on a few days previous. Mr. Capers' age was 67 years. He was a native of England and while a young man came to this country. He has been in Newburyport for thirty years. He was a man of sterling character, quiet and unassuming in manner, and held in high regard. He leaves a wife and one son.

WARREN FENNO

Warren Fenno, well-known among Boston horticulturists as a fruit expert, died at his home in Revere, Mass., on April 28, aged 50 years. He was a constant exhibitor at the Massachusetts Horticultural Society's shows and served for many years on the judging committees.

HENRY GREBE

Henry Grebe, Jamaica, N. Y., died by his own hand on April 21, while temporarily insane. He leaves a widow and two children.

News Notes

The William W. Edgar Company, Waverly, Mass., has been incorporated, with capital $25,000.

The greenhouse of Alfred Dobbertin, Rochester, N. Y., was almost completely destroyed by fire one morning last week.

William J. Doogue, son of the city forester of Boston, was married on May 1, to Miss Anna M. Duggan, at Hartford, Conn.

Forty dollars worth of plants and flowers were stolen from the greenhouses of Kuhnert & Son, at Hackensack, N. J., two nights before Easter.

J. W. Philbrick has purchased the florist business of Mrs. J. M. Julyn and will continue at the same locality, 56 Bridge street, Salem, Mass.

The City Parks Association has sent a letter to householders in the central portion of Philadelphia, urging them to put boxes of flowers in their front first floor windows, and expressing the hope that local improvement associations will foster the idea.

William A. Black, who has been with H. A. Merrill at his Royal Palm Hotel, Miami, Fla., during the winter, has come north to take charge of the grounds at Shadow Brook, Lenox, Mass., which Mr. Merrill has leased and will run for a summer hotel.

The Fleischman Floral Company has taken a long lease of No. 516 Fifth avenue, New York, a four story and basement dwelling on lot 29×125, at the northwest corner of Forty-third street. Extensive alterations will be made and the lessees will occupy the premises as a floral establishment. This will make five first-class establishments in that immediate neighborhood.

A QUESTION OF GRAPE CULTURE

I have read with interest several very interesting articles on grape culture under glass, and I should be very thankful if I could get some advice through your paper in my trouble with our grapes this year.

They don't set fruit and some of the growth, especially on the upper part of the rods looks yellowish and sickly. There is some good strong growth started at the base of the rods. The roots are outside but over them is a frame built in which we grow violets." The vines have been bearing about five years, but the soil was renewed two years ago in the violet frame, using good compost and 100 per cent of bone meal. The house is fifty feet long.

We have never had extra large bunches of grapes, but have always had a fair crop; last year it was very good.

I am much afraid that the violet frame which is heated in winter to about 45 degrees, is much to blame for the trouble as the roots are not kept as cold as the top is.

Last year I started this house the fifth of February and this year three weeks earlier. The temperature has been kept even as we use Power's regulator.

I shall appreciate any information I may get, as I am at a loss to know the exact course of the barrenness and how to remedy the same.

J. M. Roman.

Outdoor Art and Craft

The hyacinths in the Boston Public Gardens have been beautiful during the past two weeks, and have attracted throngs of admirers.

Paul A. Andrews has cabled from Paris his resignation from the Park Commission of Newport, R. I., on account of his absence and consequent inability to attend to the duties.

The disastrous effects of the severe winter and so far extremely fickle spring on the coniferous plantations in Newport are now plainly visible; on one estate alone there are fifty good sized trees dead or so nearly dead as to be useless, and on several other estates there are nearly as many in pretty much the same condition — bad for the trees and bad for the owners, but good for others.

The old fashioned "wake robin" (Trillium grandiflorum) is now blooming in the woods. If more people realized the ease with which this popular spring favorite can be transplanted, it is safe to say that the woods would soon loose many of their spring ornaments. Mark the clump when in bloom and then during the following August or September, lift the tubers and transplant them to the border, selecting a shady corner where the soil is deep and rich. It is important to mark them carefully when in flower as the tops die down as soon as the teubers have ripened, which is about midsummer.

The shade tree law of New Jersey is permissive in character and its adoption is optional with the cities of the State. In all probability several cities will take prompt advantage of it and have commissions appointed as has been already done by Newark. On the adoption of the law by the governing body of a city it then becomes the duty of the mayor to appoint three commissioners to serve without salary for five-year terms. The commissioners, after notice in the newspapers, can plant trees on any street or section of a street, the cost of the trees and boxes to be assessed on the property, and the maintenance and other expenses to be provided for by an item in the tax levy, which shall not exceed one-tenth of one mill on the dollar of ratable property.

ARBOR DAY

There is nothing finer in the whole world than a healthy tree. A tree is beautiful, of itself, by reason of its colors and lines, and still more beautiful, like a mountain or a lake, by reason of the decorative effect it produces in a landscape.

The beauty of flowers and fruits is no less, perhaps, than that of trees, but these objects are relatively ephemeral. Hence we admire violets and strawberries in general, as violets and strawberries, but we admire and even love individual trees as we do individual lakes and mountains. The trees we know outlast several generations of our animal pets and they often outlast ourselves. We are grateful to certain trees for the shade or the fruit or the nuts they have provided and for the shelter they have afforded to the bluebirds, orioles, and robins we were interested in. And we are passionately fond of certain others because they served us as play-houses when we were children, and as trysting-places when we were lovers, and are now serving as playhouses again for our children or our children's children; because, in a word, they are associated in our memories with the tenderest and happiest moments of ur existence.

HENRY A. DREER
714 Chestnut St. Philadelphia

In writing to advertisers, mention HORTICULTURE

There never was a finer festival than that which has resulted from the general adoption of a tree-planting day. The great lesson of Arbor Day is the moral beauty of civic devotion. It teaches that there is something more effective than money in improving the conditions of community life, namely, public spirit; that the humblest citizen and even the future citizen — even the child — may render as valuable public service as the nabob.

Plant a tree to-day each and every one of you; plant a tree figuratively, if you can't do it literally.

Do something to-day to prove that you are willing to put the same kind of thought and effort into the affairs of the local body-politic you put into your own.

Do something to-day to make your village, town or city a better place to live in. — *Boston Traveler.*

THE GIPSY MOTH

It seems somewhat surpsising that there should be so much popular ignorance of a series of events happening as near home as the recent gypsy moth history. It was more surprising to read in the *Transcript* of Saturday, misrepresentations of Massachusetts's work and gratuitous advice sent all the way from California, as is seen in the sentence: "California's message to Massachusetts is to stop wasting money in wrong processes for the destruction of the gypsy moth, and to get out and find the necessary reducer in the native place of the pest."

Now this is, in brief, the story of the case: The pest was found in a clearly defined, limited territory. The State appropriated money for the suppression. The work progressed from the outside of the infested district inward. Each year a certain amount of territory was cleaned up, and the lines were gradually drawn in more and more. The work was done under the direction and advice of one of the most competent economic entomologists in the country, and it had the unanimous approval of the national association of economic entomologists, including the national entomological division at Washington. The work progressed successfully until extermination was nearly in sight — suppression was certainly well in hand — when the Legislature with almost criminal shortsightedness stopped the appropriation. The pest was then unrestrained, and it increased and multiplied till all the work of extermination or suppression was undone, and the condition now is much worse than before the State commenced the work.

The money spent by the State was wasted, as is charged by the article quoted, but not by reason of "wrong processes." It was wasted because the work was stopped; because the conflagration which had been under control was given opportunity to spread and increase again.

This California writer, ignorant of what Massachusetts has done, says that "California would secure from nature an agent to destroy the destroyer."

Massachusetts has studied the parasite matter carefully, and the results may be found in pages 267–288 of the book on the gypsy moth, published in 1896.

There should be investigation of all methods that promise to help remove the terrible pest we have among us. All friends of outdoor life, of agriculture, of commercial forestry, should urge forward any investigation of improved methods of controlling this calamity. But those who have an interest in this good work of only a few months' duration, especially those situated clear across the continent, should not overlook the efficient work that has been done in the past. The fireman in combating a conflagration does what he can with the best machinery he has at hand. The chief does not order the steamers and ladders back to their houses because someone tells him that a more efficient means of extinguishing fire may exist in Europe. — GEORGE M. WHITAKER, in *Boston Transcript.*

NEWPORT

Newport at the present time is three-fourths horticulture and the other fourth about equally divided between upholstering and paint. The gardeners are as busy as nailers getting things in shape for early arrivals; early arrivals count for a good deal here and there will be more of them this year than usual. Rhododendrons are fashionable, therefore, on the quarter-acre place and the twenty-acre estate rhododendrons predominate.

Several florists who leave Newport in the winter have been here this week putting their places in shape; coming from the centers of society and business, their predictions for a gay and profitable season are credited with pleasure. Many new families have either bought or rented Newport villas; already these new comers are the magnets who possess irresistible attractions forthe florist. Many of the places they will occupy are small in area, with few facilities for supplying anything like enough flowers. Needless to say the flower men step in and fill their wants.

SOWING ROSE SEED

HORTICULTURE PUBLISHING CO.:

Would you kindly inform me how to plant rose seed? I have tried different courses but all unsuccessful.

Thanking you in advance for kindly information.

Yours truly,
A. MILLER.

Select a good mellow loam, add about one-quarter cow manure, and sift so that there may be no coarse lumps or stones. Eight-inch pans, such as may be obtained in any seed store, make very handy receptacles. Drain well with broken flower pots, put in two inches of the prepared soil, firm slightly, place in the seed and cover with a half inch of soil. Water lightly and put in a cool place, under fifty degrees, for two months. When brought into a temperature of sixty degrees at the end of this time all the fertile seeds will generally germinate in from one to three months.

Probably your expectations are too high, and you look for all your seeds to sprout. Good authorities give twenty-five per cent as the amount which, in general, can be relied on to germinate. Of course there are exceptions to this, notably Caroline Testout, which often produces over ninety per cent of fertile seeds. The selection of a good seed bearer has a great deal to do with the successful germination of rose seeds. No doubt several of the noted foreign hybridists could give us valuable hints on this particular point; but as they seem to prefer to keep the results of their investigations to themselves (and I cannot say that I blame them for it), it is up to us to experiment on our own account and not try to reap, without effort on our part, the results of the life-long works of others.

Allow me to suggest, however, that most of the trouble in raising rose seedlings comes from a too earnest desire on the part of the enthusiast to see the result of his cross and a consequent sowing of the seed long before it is thoroughly ripened. Do not make this mistake then.

Try leaving the hips on until the stems begin to shrivel and the hips are about to fall off the plant. It may take anywhere from six to twelve months, but at any rate, a thoroughly ripened seed is one of the secrets of success.

CUT-FLOWER MARKET REPORTS

BOSTON Business has been very dull here since Easter, and with the great abundance of all kinds of material coming in the street fakirs have been pretty much in control of the prices. The result is that low rates prevail, and values are maintained only on rare things that are required for special occasions. Some of the retail stores are having considerable to do in the line of weddings. All are making generous displays in their windows, as they can easily do at present prices.

BUFFALO The beginning of the week's business was quite brisk with the retailers, and stock cleaned up fairly well. Carnations were not so plentiful on Monday and Tuesday, but a couple of sunshiny days brought stock in faster than could be disposed of, roses being the most plentiful and the 5 cent signs were soon noticed amongst the retailers. Beauties held firm for a few days only, then dropping in price and were hard to move at quoted prices. Lilies are over plentiful and are not selling; no demand since Easter.

Violets are still seen and are good, considering, but not moving fast.

CHICAGO A great strike is now on in full headway in Chicago which already has produced shocking scenes of riot and bloodshed. The great wholesale cut-flower market lies in the heart of the trouble-brewing district. On April 27, the teamsters strike spread to all express companies and no calls or deliveries were made by the various companies. On this day several shipments were moved under police protection. A meeting of the wholesale florists was called at the office of the Benthey, Coatsworth Co., at which every firm was represented and a committee of six were appointed to confer with the strike leaders. Fred. Lautenschlager was appointed to arrange for the immediate delivery of all cut-flower shipments, and as director of this industry has thus far, succeeded in moving every cut-flower shipment in Chicago on schedule time, handling hundreds of boxes daily for from fifteen to twenty firms. All incoming goods have been declared contraband by the strikers and as yet no plan has developed for the delivery of incoming consignments. Long distance consignments have been ordered to other markets.

As usual with the passing of Easter, the trend has been toward lower values and only on American Beauties, select and medium grades, have sellers been able to exact quoted values.

Bride and Bridesmaid are in over supply and declined values. Lilies are now being offered in immense quantities. Carnation receipts have been heavy. Fancy grades found a good demand, but poor kinds were hardly salable. Violets have come to an end. Bulbous stock continues in large supply; however, fancy tulips are in light offerings. Narcissus Emperor is holding a good demand, also lilac and sweet peas. Some choice cut stock is offered of campanulas, heucheras, irises, and pæonies. Gladioli and orchids can be had for variety. Green goods are in ample supply.

The grand red Gladiolus Princeps are offered by Zech and Mann; McKellar has Cattleya Skinneri; Caldwell the Woodsman's new decorative green "huckleberry tree branches" at Kennicott Bros., and some choice seedlings of Gladiolus Covillii alba at Deamud's are the novelties in sight this week.

INDIANAPOLIS It was the best Easter we have ever had. All high grade stock both in plants and cut flowers sold easily at good prices. The ten days preceeding Easter being cool, kept bulbous stock and plants in nice condition, but was rather unsatisfactory for cut-flower growers. The plant trade was as usual enormous and over shadowed everything else. Lilies topped the list, with azaleas and Ramblers second. As for new features it cannot be said there was anything especially novel either in plants or made-up baskets. The stores all made special window displays and were well repaid for their trouble. Embellishments on plants and ribbon were very little in evidence this year.

NEW YORK Business is reported by the growers and wholesalers as fair, and by the retail stores as good and in some cases as very good. The demand since Easter has been better than anticipated when the lateness of the date is taken into consideration. An abundance of flowers of all seasonable kinds affords the retailers a good opportunity to use stock freely at moderate prices. White flowers in the extra choice lines are enjoying a lively demand for wedding orders.

PHILADELPHIA The week after Easter was satisfactory as to business done considering the large amount of stock. Roses and carnations were both too plentiful; cut lilies and daffodils were also redundant. Orchids very scarce. Lily of the valley was fairly plentiful, but the demand for after-Easter weddings was very large and a good many orders could not be satisfactorily filled. Gardenias sold fairly well and were in good supply.

WASHINGTON A very satisfactory Easter business. Prices were not so high as last year, but the great quantities disposed of will more than offset this.

The weather was well-suited to the delivery of plants, and growers of small and medium priced stock found an unprecedented demand. Cut flowers were extensively asked for and few were to be had Sunday morning; prices ruled about the same as last year roses being the leaders. Carnations sold well in spite of the fact that great quantities were on hand.

PLANTS FOR FALL DELIVERY.
Chicago Carnation Co., Joliet, Ill.
For page see List of Advertisers.

PLANT NOTES

The drift of opinion among growers of high repute is that the "Baby Rambler," so called, is the most valuable addition to the list of popular plants since the advent of Lorraine begonia, and it is expected to stand alongside the latter as a Christmas favorite. A large number will be brought into flower for next Christmas in many sections.

A novelty in the Boston flower stores for Easter was Canterbury Bells, blooming in pots, beautiful plants, pink, purple, and white. Thomas Roland, the Nahant wizard, grew them. They were a surprise and delight to the public and the profession.

BUFFALO PERSONALS

Mr. and Mrs. Robert Klagge of Mt. Clemens, Mich., are visiting in Buffalo.

Arnold Ringler representing Barnard & Co., Chicago, is in Buffalo drumming up the growers for fall supplies.

Jno. Bishopp, late with E. A. Butler & Son, Niagara Falls, N. Y., has leased the greenhouses of W. J. Biggar & Co., and will conduct the business as heretofore.

William F. Kasting was taken suddenly ill on Wednesday last and is confined to his home; reports state he is somewhat improving and expects to be out again in a short time.

NURSERY TRADE

The nursery business throughout New England is badly handicapped by the peculiar season. The frost was not out of the ground so that digging could be done before April 10 or 12, in the vicinity of Boston, and since that time the tension has been very trying on both dealers and customers.

SEED TRADE

The heavy frosts of April 16-18 killed a good portion of the bean, potato, cucumber, and tomato crops and also many cantaloupes in southern localities, but the work of replenishing is being rushed and the seed stores are getting the benefit.

Hammond's Slug Shot for Potato Bugs, Currant Worms, Etc.

Sold in large or small lots.

Report of a Critical Test of Hammond's Slug Shot, etc.

MADE IN 1904

James Lawrence **EDEN TRIAL GROUNDS** E. R. Lawrence

1896

SPECIALTIES: SWEET PEAS AND POTATOES

DEAR SIR: Have been delayed in reporting on goods you sent me for trial by severe illness. SLUG SHOT was as good, and did the work it was advertised to do as well and effectively as compounds and mixtures costing double and triple the price asked for it. For potatoes it proved especially efficient. Your BORDEAUX PULP is all right, dissolves readily and minutely so it does not clog nozzles of finest sprayers. Your AMMONIATED COPPER SOLUTION saved my melon vines (musk). It was not a case of preventing blight, but of checking it after it had developed and to quite an extent. I shall be glad to use and commend your goods another season.

Yours truly, (Rev.) J. REYNARD LAWRENCE,
Nov. 21, 1904. North Middleboro, Mass.

Exterior view of " U " Bar greenhouse designed and erected for Mrs. A. A. Anderson, Greenwich, Ct.

We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN. This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Bud Variation of the Grape

At a recent meeting of the Massachusetts Horticultural Society, the question arose as to whether a bud variation of the grape had ever been known and the conclusion was a negative one. But I am informed of one and I take pleasure in presenting to the readers of HORTICULTURE an account of same, which is to be found in the "Bushburg Manual," page 168, and copied from Bailey's "Annals of Horticulture" (1892) and I quote the description in full.

"Pierce Syn, Isabella Regia, a sport from Isabella, originating about the year 1881, with Mr. J. P. Pierce, of Santa Clara, Cal. The vine is an exceedingly strong grower and prolific bearer; the foliage is remarkably large; the clusters are of good size; the berries like the leaves of extraordinary size, twice the size of those of its parent, black with light bloom, and when ripe are exceedingly sweet, delicious, and slightly aromatic, the pulp readily dissolving. Mr. Pierce had it in cultivation under every condition and it has remained constant, showing no indication of returning back to the parent. The entire crop of two acres has been shipped to San Francisco for many years past under the name of 'Isabella Regia' and always realizing the highest market price."

R. B. White

Schizanthus

In the same botanical family with the potato, tomato, and tobacco is a delightful, graceful, airy florists' plant with finely-cut foliage and flowers having deeply incised corollas. This is the schizanthus, "butterfly" or "fringe flower." There are probably eight species, but all are more or less related to S. pinnatus, the common horticultural form.

The schizanthus is easy to grow. Given a good garden soil, plenty of light and air, and pot room as needed, they will thrive. They can be grown for two purposes. If the seed is sown in March or April, and the young seedlings pricked off into flats and kept growing until settled warm weather comes — when they are set out — they furnish nice garden plants. Or they may be grown for winter flowers. The seed is sown in September, pricked out when large enough, potted off, and shifted gradually into seven or eight-inch pots, when they make fine plants five or six feet tall, and will produce a great mass of

white, lilac, pale rose, deep rose, and violet flowers with spots and splashes of brown, yellow, and orange. As screens for pillars or posts they are splendid and will remain in bloom for several weeks.

The dwarf Schizanthus, S. Wisetonensis, is a fine border or pot-plant and ranges in color from white to crimson-brown.

R. L. Adams.

British Horticulture

A VETERAN ROSARIAN'S DEMISE

The world of horticulture is the poorer for the recent death of Mr. William Paul, who had reached the age of eighty-three. A few years after his father's death, he established the Royal Nurseries at Waltham Abbey, near London, in the conduct of which he was assisted by his son, Mr. Arthur Wm. Paul. The deceased nurseryman had devoted considerable attention to roses, and many leading varieties with a cosmopolitan reputation were raised by him. In 1848 he published his well-known work, "The Rose Garden," a tenth edition of which was revised about a year ago. In conjunction with the late Dean Hole, Mr. Paul was a leading spirit in promoting the first National Rose Show, held in July, 1858. He was also an active worker in the international horticultural exhibition held in London in 1866, and an associate commissioner for the Paris exhibition in 1867. Mr. Paul was a fellow of the Linnean Society and held the Victoria Medal of Honor of the Royal Horticultural Society. At his residence, Waltham House, which he purchased from the late Mr. Anthony Trollope, the novelist, was to be found one of the finest and most comprehensive horticultural libraries in existence.

FIFTY YEARS AT COVENT GARDEN

One of the oldest florists at Covent Garden, the premier market in Great Britain, is Mr. P. N. Garcia, who following his father and grandfather in the same business, has a record of over fifty years. In his early days, there was little done in the way of growing flowers for market. The bulk came from the private establishments of gentlemen in the neighborhood of London. Now the miles of market houses in the Lea Valley, a few miles out of London, at Worthing on the Sussex coast, Swanley and Baxley Heath in Kent, with the bulb farms in Guernsey, Lincolnshire, and the Scilly Islands, have completely revolutionized matters. In addition, heavy supplies are usually available from the south of France. Mr. Garcia expressed the opinion that there are now as many flowers handled in Covent Garden in a day as there were in a year in his early days. The process of retarding has also extensively developed the florists' scope. Lilies of the valley and longiflorums are available all the year round. Mr. Garcia has witnessed a good many changes. Years ago camellias were popular and fetched good prices, and now they are obtainable at from 2*s*. to 2*s*. 6*d*. a dozen. Gardenias and roses have superseded them. Carnations are steadily increasing in popularity, amongst the varieties in favor for market work being Mrs. Lawson, Royalty, Melba, Gov. Roosevelt, Sybil, etc. I learn that the increasing tendency to exclude flowers at funerals has made a great difference to the trade.

FLORAL EMBLEMS

In recent years the practice of wearing red and white roses on St. George's day has steadily increased, adding a welcome touch of color to our somber city streets, and giving the florists' trade an acceptable fillip. This year St. George's day unfortunately falls on a Sunday, and this will make a great difference to the demands made for the "Queen of flowers." Primrose day will be observed on April 19th, when this modest little yellow bloom is everywhere worn by admirers of the late Lord Beaconsfield. This affords a profitable trade for the street hawkers, but it does not very much affect the florists. The supplies are obtained from the hedgerows and plantations in rural England, and a raid is made on these by reckless vandals. Apart from this wearing of the primrose the adoption of floral badges by politicians has not yet "caught on." Mr. Chamberlain usually wears an orchid when in public, the buttoniere being sent daily from his extensive conservatories at Highbury near Birmingham. The expensive character of this flower, however, will prevent it from becoming popular amongst his numerous admirers. The trade wish that some more democratic floral adornment was adopted by this noted statesman.

TRAVEL AS AN EDUCATOR

Sometime ago a party of market gardeners from Evesham in Worcestershire paid a visit to the French growers' establishments in the environs of Paris, the tour being under the directorship of Mr. C. D. McKay, of the firm of Messrs. Watkins & Simpson, seed merchants, Covent Garden. The affair was entirely successful, and afforded the visitors instruction of a very valuable character. Arrangements are now being made for a party of British horticulturists to visit France next month. On May 16 they will leave London for Orleans, where on the following morning the leading nurserymen in that district will lunch with them. The chief nurseries will be inspected as well as the Jardin des Plantes. On May 20th, the International Exhibition at Paris will be seen at a semi-private view, and on May 22d the President and Council will receive the party at the exhibition. Invitations have been accepted to visit the seed establishment and trial grounds of Messrs. Vilmorin, Andrieux & Co., the nurseries of Messrs. Croux & Sons at Chatenay, those of Messrs. Dival & Son, Versailles, and the principal lilac growing and forcing establishments at Vitry. A representative number of British traders will participate in the tour, which from an educational point of view will be very useful, besides tending to cement the good fellowship between this country and our French neighbors.

W. H. Adsett.

London, England, April 15, 1905.

Ferns for Every-Day Use

DAVALLIA

(Continued from last week's issue)

D. illustris is a very heavy grower, fronds from two to four feet long of heavy texture, with long strong stalks, dark green color, spear-shaped, pointed pinnules set near together, the whole frond having a massive appearance. The rhizomes are thick and short, covered with long brown scales.

D. Novæ Zelandiæ from New Zealand is a small-growing species, fronds never over one foot and a half long, finely divided in narrow segments. The thin creeping rhizome is covered with brown, glossy, hairy, soft scales.

DAVALLIA ILLUSTRIS

D. pentaphylla from Java and Polynesian Islands, has fronds only once divided, about one foot long, short-stalked, composed of two or three pair of lateral and one terminal pinnæ of a metallic color when young. The rhizome is covered with narrow light-brown scales.

D. repens or hemiptera from Polynesian Islands. Frond nearly stalkless, simply pinnate and from eight to twelve inches long, and one and a half inches broad. The entire pinnæ are slightly curved at the lower part and rounded at the upper; sharply lobed and of soft texture. The black-scaled rhizomes are thin and creeping.

D. Eyermannii from the west coast of Africa, commonly known as "bear's foot fern." This small-growing species has the fronds of a bright green color, triangular in shape, and finely divided. The creeping rhizome is covered with white, narrow silvery scales.

(Stenoloma)
DAVALLIA TENUIFOLIA

STENOLOMA

Of the davallias with underground rhizomes there are only a few species.

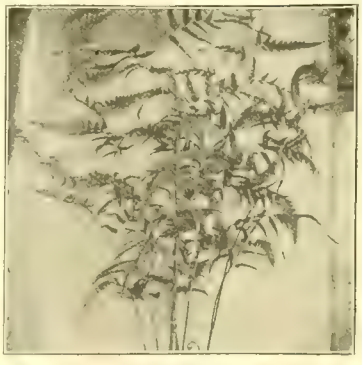
D. tenuifolia from Malayan archipelago is well known and used.

D. t. stricta and D. t. Veitchii are two good forms not so much known. The first one is of an erect growth, larger in all parts and of a dark green, heavy texture; the second has fronds two to three feet long, on slender stalks, finely cut, and arching. It is a good plant for baskets.

D. aculeata and D. fumarioides, both from West Indies, are climbing; in their native country they cover whole fields and climb along the trees they can reach. The stalk is wiry, covered with sharp, curved thorns. The pinnæ are set like the lygodiums, but finely divided. They have the peculiarity of the gleichenias of lengthening themselves at the end to an indefinite length. The second is more finely divided than the first.

MICROLEPIA

This is a section with underground and above-ground rhizomes. They are very effective, and of a strong growth. Some of the best are:



(Microlepia)
DAVALLIA SPELUNCÆ

D. hirta or D. scaberula from Ceylon; stalks strong and erect, the fronds from three to five feet long, and one to two broad, are three to four times divided. The pinnules are spear-shaped and cut in broad toothed lobes.

D. platyphylla from Ceylon and south Asia, has fronds three to four feet long, half as broad, and of massive growth on a strong, upright stalk. They are of glaucous green color. The pinnæ are long and broad, spear-shaped, the lower part divided into long, spear-shaped pinnules, the top deeply cut in oblong lobes.

D. speluncæ from Jamaica, has the stalks covered with brown hair at the base. The fronds, of large, triangular form, are finely cut and of heavy, leathery texture.

D. strigosa is found all over south east Asia and the Himalayas. The fronds are from one to three feet long, half as broad, the stalk hairy the whole length. They are twice divided, the pinnules bluntly toothed, the upper edge deeper than the lower. The rhizome creeps above ground and is covered with fine downy hair.

(Microlepia)
DAVALLIA PLATYPHYLLA

HUMATA

This section has the creeping rhizomes, and the fronds entire.

D. heterophylla and D. angustata from the Malayan peninsula, are the two only species in that section. They have their entire fronds short and narrow, shortly stalked and slightly notched. The first one has the fronds a little larger and the fertile ones more lobed.

Amédée Hans

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

II HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

We have received letters from two subscribers complaining of the receipt of over-kept flowers in response to an Easter order and the refusal of the shippers to make any concession thereon and asking if something cannot be done to prevent such practices. HORTICULTURE has from the start had very pronounced views on this subject and has not hesitated to express them. "We may give advice, but we cannot inspire the conduct," and we see small hope for reform until the more intelligent cut-flower growers take the matter in hand and bring pressure to bear on those individuals who, by their unwise practices, have done so great injury to the flower industry.

The studies in flower arrangement which Mr. H. H. Battles has from time to time contributed to our pages are admirable for their simplicity and their direct appeal to that artistic taste which constitutes almost the entire equipment necessary now-a-days in the successful floral artist. The specialist, with his improved greenhouses and advanced methods of culture due to intelligent application and study, has given us such a perfection of plant, flower, leaf, and stem, that no florist ambitious to rise to the level of first-class work for first-class patrons has any further use for the wire and tooth-pick methods of by-gone days or instruction on antiquated "making-up" methods. With the quality of material now available, the less "making-up" the better.

Very commendable indeed, is the action of the City Parks Association of Philadelphia urging the general display of window-boxes of plants in the residential districts of the city. A similar movement in London has met with great success and the result is a brightening up of the monotony of many of the streets in the poorer sections of the metropolis. In Paris also the streets are similarly embellished, and it has been noted that the standard of those localities where window-gardens flourish, has been materially raised since their general adoption. It is contemplated to have some of the London horticultural societies offer substantial prizes for competition in out-door window gardens in the poor localities in the metropolitan area the coming summer. This form of æsthetic philanthropy has everything to recommend it.

Those growers who had candidum lilies to offer for Easter this year, found a ready appreciation for the fragrant blooms and realized a profit far beyond that yielded by the longiflorums. Admitting that the quick sale and the price were possible mainly because there were but few of them, and that a general return to candidum culture would not be wise, yet it remains true that the old favorite retains a firm hold on the affection of many people who look upon it as the true "Easter lily." The availability of longiflorum and Harrisii was not the main cause of the abandonment of the candidum as an Easter crop. This was due fully as much to the depreciation in the quality of the bulbs obtainable and the miserable character of the flowers produced therefrom. The bulbs from the northern part of France, which in the past had produced each from ten to fifteen big heavy blooms with waxy overlapping petals, were superseded by bulbs grown in Turkey or the south of France, very large bulbs, but producing small, thin, narrow-petaled flowers, short lived and miserable every way. If growers can assure themselves that they are getting the right bulb they can safely invest in a moderate supply of them and will find them in acceptable demand. Candidums require a very different treatment from that given to longiflorums. They must be put outside and frozen before being started in the greenhouse. January 1 is early enough to start them, and good growers say that the temperature of a carnation house, about 50 to 52 degrees at night is about right for them.

Some of our contemporaries have waked up to the fact that the Baby Rambler rose is a great acquisition as an Easter plant. As far back as last December HORTICULTURE gave especial prominence to an illustrated interview on this subject with Mr. Lynch of the Dingee & Conard Co. One of our contemporaries in its issue of 29th ult. records that W. K. Harris marketed some Baby Ramblers that were a revelation; that one-year-old plants in 6-inch pots which had already flowered at Christmas and been cut back to the pot for cuttings, had, when delivered by him at Easter, from six to ten or more clusters of flowers larger than the best Crimson Rambler, more open and not disposed to fall off as does the Rambler. The prediction is then made that it will entirely replace the "parent" plant as an Easter staple. In an editorial a western contemporary states in a recent number that the Baby Rambler as an "Easter plant" has come to stay. What's the matter with it for any kind of a plant — for Easter, Christmas, Decoration Day or any other function? It's always ready. Moreover, one of our leading authorities in rose culture states most positively that own-root stock will produce more brilliant flowers and of larger size than will budded or grafted plants.

This point should be made particularly emphatic as statements to the contrary have recently been published.

We do not wish to indulge in a pæan of "I told you so," but it is permissible to call attention once in a while to one of the many instances where HORTICULTURE's correspondents have demonstrated their ability to give the jiu jitsu to their lagging contemporaries.

After Adjournment

The *New York News*, in a little story about bridal bouquets and bridal adornment, tells its readers that, "for the bride's veil, Easter lilies are often used either instead of or combined with orange blossoms." Effect must be stunning!

We have it on the authority of the *Boston Post* that the nepenthes is in the habit of catching rats in its deadly pitchers and killing and then digesting the body of the victim. It furnishes a striking picture of a rat with his head in chancery as an evidence of the veracity of the tale. Enough said.

Charles W. Ganzell, the former famous catcher of the Boston National league ball team has been confirmed as park commissioner of Malden, Mass. Thus does the serious business of life make common cause with the sportive element and Mr. John Westcott's paradise seems to come nearer and nearer to full realization.

Exposure of the substitution of common earth for rich garden mould in the resoiling of portions of Central Park by Park Commissioner Pallas's favorite contractor, Charles L. Doran, has been fully corroborated through an investigation by Comptroller Grout. The contractor's bills for impoverished earth already delivered will not be paid, and Commissioner Pallas will be warned that further injury to the city's great pleasure ground through improper resoiling will lead to serious consequences. The report to the comptroller says: "Under date of April 10, 1905, a contract was made with Charles L. Doran for furnishing and delivering 10,000 cubic yards of garden mould for the park department. This contract provides that 'the material shall be fertile garden mould, clean and free from stones, roots, weeds and other extraneous matter.' The contractor has commenced delivering material under this contract. The material has been obtained from excavations made from cellars in 118th street, between First and Second avenues, and in 121st street between First and Second avenues." — *Boston Transcript.*

Is this the "fine work of civic patriotism" undertaken by the public-spirited women of the West side or is it some of the "drastic methods" that were to be instituted for the salvation of the Mall elms?

If you have orders for flowers to be delivered on Trans-Atlantic Steamers, transfer them to Alex McConnell, 546 Fifth Ave., or Thos. Young, Jr., 43 W. 28th Street, New York City.

"Tickle her with a hoe and she laughs with a harvest." Very true, unless the bugs take possession. Have a bag of Hammond's Slug Shot ready for them at all hours. Slug shot and eternal vigilance are a winning team.

Watch our advertising columns for sterling novelties. There are several this week that every one can safely invest in. That Barrowsii fern is a gem of the first water and bears a like relation to the original Piersonii that Scottii does to the old exaltata Bostoniensis. Wellesley rose is already too well known to need any further recommendation. Crassula hybrida, Louis Dupuy's masterpiece, is in a class with the fancy ericas and epacrises for beauty. Those who have it next season will not regret the investment. And then there is Begonia Turnford Hall, the new pure white Lorraine offered by Cincinnati's crack grower, J. A. Peterson. It is a winner.

GRAPES

In last week's issue of Horticulture appeared a communication from Mr. Roman in regard to grape vines failing to show fruit. This is a matter of much importance and I hope to see in Horticulture many responses to Mr. Roman's inquiry.

Having a violet frame over the grapery border, heated as was stated, doubtless in some measure contributed to the failure, but as it appears the growths from these vines are healthier and stronger from the bottom than from the other parts it would seem that the trouble is not all at the roots, although no doubt too large a percentage of bone was used for the compost put in the violet frame — 100 per cent of bone meal would injure most things. Many people are very anxious to see their vines bearing a large crop, even eager to increase each year's yield; in some cases this is carried to such a length that the vines are weakened resulting in little or no fruit, all because they were too heavily cropped.

Over-cropping ought to be guarded against especially with young vines, and the fact that the vines in question were only five years old and had been started in to growth three weeks earlier than last year, after having borne a very good crop of grapes, is very likely one cause of their failing this year.

In grapes it is very important to get the wood ripe before pruning; perhaps the wood was not ripe enough when Mr. Roman had his vines pruned. Vines showing no fruit and having but little growth and even that of a yellowish appearance would seem to be in a rather bad condition, especially when it is considered they are only five years old. If the shoots growing from the bottom of each vine are vigorous they ought to be left on, and allowed to run up, every other one to the top of the house, the remaining ones pinched back at about six feet from the ground. It might be suggested that the shoots allowed to run up to the top of the house take the places of every other one of the five-year-old canes, or in other words, cut out every other one of the five-year-old vines (cutting them next winter) letting the young shoots take their places, but cut them back to three feet in winter. If after a trial next year any of the five-year-old vines left show any improvement they could be left, and in the places of any that show no improvement there could be placed the shoots stopped at six feet this summer. The first year these young vines ought to be cut back within three feet of the ground and not allowed to bear fruit.

D. McIntosh.

BUFFALO PERSONALS

W. F. Simmons and family of Toronto, were recent visitors in Buffalo.

William F. Kasting who was ill, has much improved, and can now be seen daily at his business.

Cheerful Harry Bunyard made a return-trip call this week for the orders he did not get on his first visit.

Christ Bartz, well-known to the trade, has returned from Waynesville, N. C., to look after the interests of the J. H. Rebstock Co.'s excursion lines.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Being unable to see all personally, we wish to use this column to express our sincere thanks and appreciation for the flowers and other kind remembrances of our friends during our late bereavement.

James D. Rough.
Nellie S. Rough.
Mary J. Rough.

The following answer has been received from the Park Street Market appertaining to the challenge recently issued in this column.

To the Growers of Music Hall Market:

Being duly authorized we accept your challenge for a ball game and suggest that we will meet your representatives at once and arrange date and place.

Charles Evans, *Manager.*
Edward Crowley, *Captain.*

A picnic and ball game between the two Boston Flower Markets has been arranged for Saturday, June 3, in Natick. Tickets $1.

Thos. F. Matthews.

WHOLESALE CHESTNUTS

Plant beds with plants of one kind. Crazy-quilt work is vulgar, and troublesome in more ways than one.

Don't let up on bugs, moths, and insects; if you get tired fighting them they will get livelier than ever.

If you have anything good to exhibit, show it; if for nothing else do it for the upbuilding of the craft. Exhibitions have accomplished wonders for horticulture, so keep the good work a going.

Why stop growing chrysanthemums? Keep your hand in; if not, the other fellows will get the better of you when chrysanthemums come to the front again, as they surely will.

Gladioli are less troublesome than most things grown and fully as useful; put in a lot of the best and you will not be sorry.

Go around now and see how your neighbor does things; go back again and note results. If his ways are better, as shown by results, don't be too "stuck up" to imitate him. You can't tell but he may return the compliment.

Don't worry if things don't turn out exactly right. Experience gained through one big failure has been known to be of more benefit than a hundred minor successes.

"White Heather" is the title of a booklet compiled by Ellen Veloin, 40 West 20th street, New York, and designed for the use of florists in soliciting wedding commissions. White heather, the Scottish symbol of good luck in marital matters, adorn the cover, and the pages are given up to ring lore and mottoes, symbolism of precious stones, names of wedding anniversaries and similar information. Upon the title page and back cover space has been left for the name of any florist who wishes to use the volume as mail literature. Accompanied by a personal letter during the recognized wedding seasons of the year it ought to produce business. — *Printers' Ink.*

NEWS OF THE CLUBS AND SOCIETIES

NEW YORK FLORISTS' CLUB

Forty members were present at the May meeting last Monday night. The amendment to the by-laws raising the secretary's salary and transferring the duty of dues collecting to him was carried.

The question box was again prolific in starting discussion.

"Are street merchants and peddlers beneficial or detrimental to the florist business?" was replied to by A. H. Langjahr on behalf of the wholesalers, George Darsley and John Donaldson for the growers, and W. Marshall for the retailers.

"What are the essential qualifications of a judge of plants and cut flowers?" brought out a good response from Patrick O'Mara.

The question, "What is the most valuable plant introduced in the memory of any member of the Club?" was attended to by Messrs. O'Mara who named Ampelopsis Veitchii, George Darsley who mentioned the Double Geranium, Charles Lenker who favored the Crimson Rambler rose, James T. Scott who specified the American Beauty, and several others with a variety of favorites.

It was voted to have in June, a Ladies' Night, with exhibition of strawberries and pæonies.

The display of bedding plants on the exhibition tables was very large and creditable to the growers thereof, to whom an enthusiastic vote of thanks was accorded. The following is a list of the awards:

Award of merit for culture to Smith & Lappie, Phlox subulata and candytuft.

James H. Henderson, hydrangeas.

S. C. Schroeter & Son, coleus, ageratum and Salvia Fireball.

John Birnie, Geranium Mme. Landry and verbenas.

H. Bauman, mignonette and geraniums.

Hartmann and Wagenfohr, cinerarias and polyanthus.

John Reichert, Crimson Rambler roses.

H. C. Steinhoff, H. P. roses in pots.

Charles Hunt, Pelargonium, Victor geraniums assorted, and pansies, extra fine.

Herman Mende, Mme. Salleroi geranium, English ivy, ivy geranium and Poitevine geranium.

C. Pesenecker and Son, pansies, very fine, candytuft, and Funkia var.

John Tschupp & Co., fuschia, Little Beauty.

Augustus Spies, pansies.

Wm. Stadtmiller, sempervivum, lantana, and musk.

Fred. Englen, heliotrope and Pelargonium Victor.

George Darsley; geraniums.

John Harrison, lemon verbena.

Leach Bros., petunias, double, heliotrope and Anthericum.

F. Weinberg, sempervivum, sedums, echeverias, phyllocactus and Cavissa foetida.

F. Dressel, kentias.

Peter Yost, Sempervivum Lindenii.

Honorable mention to:

Tonicassia, Armeria maritima.

George Fick, daisies and forget-me-nots.

Aug. Kressinger, nasturtiums.

Charles Heinz, Myrtus communis.

AMERICAN ASSOCIATION OF NURSERYMEN

In the program for the convention of this society, a paper upon "San José Scale Again — The Best Spray," by F. C. Hall of Maryland, has been substituted for "Plants in Department Stores," by Howard A. Chase, on Wednesday, June 15.

NEW JERSEY FLORICULTURAL SOCIETY

The regular monthly meeting of the New Jersey Floricultural Society took place on Friday May 5, in their rooms in Orange. Orchids in variety were exhibited by Julius Roehrs (D. Kindsgrab, William Runkle), William Barr (Arthur Bodwell) and Henry Graves (Edwin Thomas). Roses by John Crosby Brown (Peter Duff) and carnations from the Colgates (William Read), A. C. Von Gaasbeck (William Bennett), Charles Hathaway (M. Hornacker). Vegetables by Stewart Hartshorne (A. Caparn), and Mrs. William Pierson (Charles Ashmead). A hybrid Lælia purpurata var. William Barr, exhibited by Julius Roehrs for the first time, and specimen Cœlogyne pandurata, the only green and black orchid, from the collection of Henry Graves, grown by Edwin Thomas, and Cattleya Mossiæ with forty-one blooms from that of William Barr, grown by Arthur Bodwell, and a vase of seedling carnation grown by M. Hornacker and certificated, were of chief importance.

The topic of the evening was a "Talk over the Fall Show" which it was decided to hold in November.

After adjournment the project of a new orchid society was discussed. The society has orchidists Julius Roehrs, John E. Lager, Henry Hurrell, Dr. J. M. W. Kitchen, W. A. Manda, Jos. A. Manda, William Barr, and Henry Graves, among its members at the present time.

JOS. B. DAVIS.

NEWPORT HORTICULTURAL SOCIETY

A regular meeting of the Newport Horticultural Society was held last Wednesday evening, first Vice-president Alexander MacLellan in the chair. Several matters of importance came up for settlement, among them being the vexed question of what to exclude in the class for a gateway decoration at the coming exhibition. Inasmuch as Miss Keteltas' motive, aside from her interest in the society, for offering the cup, is to bring out something suitable for planting at gateways different from the stereotyped beds of retinosporas, it was decided to make the class read that nothing will be excluded except coniferæ and that this class be exempt from the stipulating three-months' possession before date of exhibition.

The committee on advertising reported very satisfactory progress and that many of the largest horticultural firms had already made application for space in the schedule, while many more asked for space for exhibits in addition.

Robert Patterson resigned from the State committee on rural progress on account of other engagements, and Alexander MacLellan was elected in his stead.

LENOX HORTICULTURAL SOCIETY

The Lenox Horticultural Society held its regular meeting on May 6, 1905. President R. A. Schmid was in the chair. A diploma was awarded to Elm Court Farm for a magnificent plant of Cattleya Mossiæ. August Harrier and Joseph Tansy were unanimously elected members of the Society.

William Woods, gardener for Mrs. John E. Parsons, of Lenox, gave a very interesting lecture on "The Leaves of Plants," which caused a great deal of discussion.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Growers of and dealers in American-grown bulbs are notified that the usual accommodations will be extended to them free of charge for the display of American-grown bulbs at the convention to be held in Washington, D.C., August 15–18, 1905.

WM. J STEWART, *Secretary.*

NOTES

The Holyoke, Mass., Horticultural Society will hold a rose show in June, time, place, premiums, etc., to be announced later.

The New Haven County, Conn., Horticultural Society will offer premiums for the best-kept amateur garden in New Haven this summer.

The Nassau County New York Horticultural Society held its regular monthly meeting on the evening of May 3d at the Glen Cove Greenhouses, the attendance was fairly large. A paper on "Hardy Flowering and tree-like Shrubs" was read by John F. Johnston. Discussions followed.

The Kentucky Society of Florists held its monthly meeting with Messrs. Coenen & Co., on May 2. The attendance was astonishingly large and very enjoyable. President Baumer on behalf of the society presented a handsome cane to Financial Secretary Coenen, with an appropriate speech. After the meeting, lunch was served.

A GOOD WORK

The Home Gardening Association of Cleveland, O., organized for the purpose of supplying the school children with flower and vegetable seeds of easy germination, at the end of five years finds its work more widely known and its aim better understood. This is manifest in a number of ways. The occupants of a small house are furnished an incentive to make the yard attractive; the real estate dealer recognizes the improvement in the appearance of property and appreciates the consequent increase in values; the teachers and school officials, almost without exception, concede the vital interest aroused in the pupil and are ready to make use of this aid to school work, and people concerned for the improvement of the city conditions are satisfied that this is one of the effective means to secure that most desirable result. Inquiries from other communities are increasing and in a number of instances work along similar lines has been started. The sale of seeds this year exceeded that of any previous year. The total number of packets and bulbs distributed being 237,393, of which 140,106 packets of seeds and 27,440 gladiolus bulbs went directly to the Cleveland school children, and 57,857 packets were sent to schools and organizations outside the city. A. L. H.

Charles E. Perkins of Boston, has presented his native city, Cincinnati, O., with a tract of valuable land, five and one-half acres in extent for a public park. The only restrictions are that the public shall have access to the park at all hours, that there shall be a playground for the children, and that no portion of the park be made into a flower garden.

Obituary

ALFRED WHITING

Alfred Whiting died at his home on Whiting Lane, West Hartford, Conn., on May 5, at the advanced age of 81 years. Mr. Whiting was in business as a florist on Whiting Lane between fifty and sixty years. He was a member of the S. A. F. continuously from the second convention, Philadelphia, in 1886, and attended the conventions regularly until obliged by the infirmities of age to discontinue. None knew him but to like him and he enjoyed in a marked degree the respect and affection of his brother florists, several of whom acted as honorary pallbearers at the funeral. The casket was carried by workmen employed by Mr. Whiting in his business. Mr. Whiting leaves one daughter, an only child, his wife having died in 1874.

FRANK A. PIERSON

Frank A. Pierson, eldest son of A. N. Pierson, of Cromwell, Conn., died at his home, April 29, at the age of 28 years, of spinal meningitis, after an illness of one week. Two physicians and two nurses were in constant attendance at his bedside, and several experts, who have made a special study of this disease were called in consultation, but all efforts to save his life proved unavailing. Mr. Pierson had obtained a good knowledge of greenhouse work from his father, and a few years ago started in business for himself. He made a specialty of bedding stock, etc., and grew large quantities of smilax and some asparagus. His business had increased rapidly and arrangements had been made for doubling his plant this spring.

About three years ago he married Miss Ruth Coe, who with one child survives him. Last fall he was chosen to represent the town in the State Legislature and was a member of the committee on banks. His disposition was kind and affectionate and he made friends readily and held them to the end. He was very popular in his home town and enjoyed a large acquaintance throughout the State. He was especially fond of nature, loved the woods and spent a part of each year in Maine where he had a camp. He was a practical electrician and had devoted much time to amateur photography, in which field he had done some excellent work. The funeral occured at his late home, Tuesday, May 2, and the burial was in Miner Cemetery, Westfield, Conn.

BENJAMIN GINGRICH

Benjamin Gingrich of 732 East Dubail Ave., So. Bend, Indiana, died very suddenly May 2, at the age of sixty-two years. He was the president of the South Bend Floral Company.

E. T. HEINEMAN

E. T. Heineman, formerly of 5426 Walnut street, Pittsburg, Pa., is reported dead.

Rosa Rugosa Crossings

Extract from notes by Maurice L. de Vilmorin in "Revue Horticôle."

ROSA MICROPHYLLA × RUGOSA

The introduction of roses with rugose foliage into culture marks an event, the importance of which may be already predicted, but cannot yet be definitely estimated. It may be that this species offers to seedsmen and to hybridizers in general potentialities comparable to those which characterized the introduction of the Bengal blood into the gardens more than a century ago — the starting point of a great revivication in rose production.

Grand and rare are in fact the merits of the Rosa rugosa. It is naturally sturdy, abundantly furnished with beautiful glossy dark foliage, turning fiery-ocre color in the latter part of the season; its flowers are the most abundant in the rose genus and are produced during the whole course of the summer and autumn; the fruits exceptionally beautiful, adorn it to the end of the season, and finally this rose enjoys the unique distinction of a robust vigor, which permits it to withstand the coldest weather and to hold out against parasites, insect and fungous, better than any other rose.

Cultivators in love with the rose cannot overlook these grand qualities. In its native land Japan this species has been crossed or has crossed itself naturally with at least two other significant species: with the Rosa semperflorens or Bengal rose — either the typical or probably an already crossed Bengal rose — and with the Rosa multiflora. The first crossing has resulted in the rose, Taikun, with foliage more narrow than in rugosa but larger flowers, double and fragrant. Of the second came the rose Ywarda de Siebold, producing a compact bush six to eight feet high, presenting abundant foliage, but with white flowers, small, and of short duration, and of insufficient hardiness.

Some other crossings have been made by the Japanese, but it seems that these passionate gardeners prefer to devote themselves to the search for varieties, as numerous as possible, which the original type may give them by spontaneous variation or at least by simple breeding.

It was reserved for European and American horticulturists to develop the rugosa types, and gratifying results have already followed the crossing of rugosa with varieties under cultivation. One of the first hybrids is Madame Georges Bruant, out of rugosa × The Sombreuil. Many other varieties have been found; it would in fact be an interesting study to review them all. In general the hybrids are endowed with nice foliage, the flowers frequently have a rich and delicate perfume, which in rugosa is but slight.

Among the rugosa hybrids existing in botanical collections which merit a place in amateur collections are: Carolina × rugosa, lucida × rugosa, aricularia × rugosa, Californica × rugosa, rugosa × ferruginea, rugosa × Virginiana, rugosa × blanda, rugosa × Beggeriana, rugosa × lutea, and rugosa × foliosa.

We now reach the main object of this article, the rose hybrid, microphylla × rugosa This makes a very nice bushy plant suitable for planting either as a single shrub, or in a border. It forms a regular bush of five feet in height and with a width of equal dimensions. It retains the erectness of twigs, the double prickles at the base of the foliage, the globular bud and the prickly fruit of microphylla. From rugosa it has inherited the abundant foliage to the base of the twigs but, although very rich, it does not equal the grand, round, and reticulated leaves of rugosa. The flower, of a rosy, pale lilac, exceeds three inches in diameter, but unfortunately the petals are deficient in consistency. The flowering commences in the middle of June and is prolonged until August, with some flowers later in the season, but it cannot be said that the rose is a monthly or remontant rose. The fruits are very pretty, shining orange color, nodding on short stems. The pulp reminds of the odor and taste of the apple, while the red fruits of rugosa are tasteless and the green fruits of microphylla are astringent and bitter. These fruits contained seeds in abundance.

This rose originated in the garden of the botanical institution in Strassburg by accidental proximity of its two parents. It is probable that microphylla was the female parent, as the hybrid was found close to the root of this species, among other numerous natural seedlings.

Edward Grady, driver for A. M. Davenport, of Watertown, was badly injured in a runaway, May 6, the horse he was driving taking fright at an automobile.

OUTDOOR ART

The Metropolitan Park Commissioners have granted locations to two trolley lines to traverse the Middlesex Fells reservation.

J. W. Adams & Co., of Springfield, have secured the contract for furnishing the trees and shrubs for the beautifying of the town of Easthampton, Mass.

The Park Commissioners of Webster, Mass., have awarded the contract for grading and planting the new park at the junction of Main and Lake streets, to Fred. A. Wellington.

More than 200,000 shade and other ornamental trees have been shipped into Denver since the first of the year for local use. This exceeds the shipments for any like period within the last ten years.

Within a few days the Boston and the Metropolitan park systems will be connected so that there will be a continuous thirteen mile parkway from the Boston Common to the foot of Great Blue Hill in Milton.

Nineteen willow hampers, each containing 17,000 young spruce trees, imported from Germany by the Remington-Martin Company of Norfolk and Raymondville, have arrived at Potsdam, N. Y. The company proposes to plant the trees on its tract of land southeast of Potsdam. The seedlings will be set where there is now a forest covering, thus insuring protection to the tender plants. The company expects to be able to make a cutting in 20 years.

HE WHO PLANTS A TREE

There is a fine patience and broad charity in the man who plants a tree. No one action better typifies the real purpose of our living.

He who plants a tree may never enjoy its shades or gaze upon its full-grown splendor, but he is doing what he can to make the world a wholesomer and happier dwelling-place for those who come after him.

What a noble gift to a man are the trees! How pleasantly their shadows fall upon us when we turn from the glitter and turmoil of man! The winds of heaven seem to linger amid their balmy branches and the sunshine sifts through the green leaves like a blessing purified.

We call the tree an inanimate thing, and yet the plants, of which the tree is the head, manufacture all the world's living material. They make it of carbonic acid gas, to man a poison, and release life-giving oxygen. But for the trees the atmosphere of the earth would be a deadly gas. But for them the surface of the earth would be bleak rock.

The tree is a thing of wondrous interest and beauty at any season — in the spring when its buds and blooms are opening, in the summer when its broad canopy of glorious green whispers repose, in the autumn when it prodigally flings forth its brilliant colors,

and in the winter when its bare branches are like etchings against a sky of steel.

Of all man's works of art a cathedral is greatest. A vast and majestic tree is greater than that. If the groves were the first temples, it is equally true that the tree was the first to suggest to man's mind the infinite.

From the first it has furnished man with shelter and fuel. Under its leafy dome the greatest charter of human rights has been signed; the world's greatest treaties have there been written; and the surrender of great armies has been concluded there. But for the tree human history would be a thin tale soon told.

Beneath the tree the weary have rested and found strength and hope; there lovers have trysted ever since love first illumined the world; there Adam and Eve were tempted and lost paradise; there children have played and restored it; to the soothing shade man ever has turned with his griefs and found calm and peace.

He who plants a tree plants shade, rest, love, hope, peace, for troubled ones who will come his way when he is gone. Is it not a noble monument to leave?

There is nothing in which God asks so little of us and gives so much as in the planting of a tree. He gives the soil, the seed, the moisture, the sunshine, the air — aye, and the selfless impulse to do our own little part of just planting it comes from Him, too. — *Albany Times Union.*

THE PALISADES PARK

The Palisades Interstate Park Commission is proceeding with its important work in an unostentatious way. Last year the commission added 112 acres to the park, making the total acreage over 438, with a frontage on the Hudson of 41,923 feet. The total cost of the park thus far is $326,804.30. The river frontage to be included in the park extends for 13.86 miles, of which 11.02 miles is in New Jersey, and of this State frontage 17,710 feet is yet in the hands of private owners. One-seventh of the private frontage has practically been purchased.

The commission began its labors in 1901, and in four years has accomplished splendid results. In another four years the entire frontage on the Hudson will be secured and dedicated as a public park forever, and New Jersey and New York will have the most unique and beautiful park in the whole world, a park that preserves the famous Palisades of the Hudson of matchless scenic beauty. The vandalism that destroyed so much of the cliffs has been ended by the enlightened action of the States in coöperation and posterity will bless them for it.—*Newark, N. J. Advertiser.*

AND CRAFT

PARK ROADS

J. A. Pettigrew, in American Park Superintendents' Bulletin

Park roads, unfortunately, are a necessity. This being so let us hide them as much as possible within the woodlands. Not, however, so much so as to nullify the purpose for which they are intended; that is, to afford a means of viewing the beauties of the park from vehicles. Let us, then, treat them as a means to an end — supernumeraries, as it were — while nature holds the front of the stage. And let us plant our roadsides, occasionally letting the fringe of bushes intrude over the edge, thus softening the hard lines so often apparent — our native material does the thing admirably.

ROAD CONSTRUCTION

Seeing that we must have roads in parks, have them well built, and that, too, without unnecessary expenditure of money. For ordinary park use a road of six inches in thickness of road metal when rolled is ample, provided the sub-bed is properly made. Our experience convinces us that neither clay nor loam need to be excavated from the sub-bed to a depth lower than four inches, as a sand layer of this thickness will prevent the clay or loam bottom from moving. Having drained and graded the sub-bed to a point six inches below finished grade, the top four inches of the sub-bed being sand or fine gravel, the operation of making a road is very simple. First, lay sufficient good broken stone, of 2 inch to 3 inch cubes, to make four inches when rolled; add enough stone screenings or coarse bank sand to fill *all* voids; water and roll well, first with a light roller; care must be taken that the stone is spread over the sand bed, not through it by the churning of the wagon wheels. Over a clay bottom everything depends on the integrity of the layer of sand. For the surface a good wearing stone should be selected, a tough-textured trap-rock is the best, granites are usually too hard and brittle, they grind under travel and require unusually good binding material; of limestones, some are good. The question of the surface stone, however, must be decided by what may be available in the locality. Two inches of stone, of 1½ inch cubes, when rolled, is sufficient for a surface course. This course should be bonded with clean, sharp stone screenings. Again water and roll with heavy roller, adding 1½ inch cube stone to fill up any depressions that may occur, until the road is firm and true to section; a sprinkling of stone of ½ inch cubes may then be spread and rolled in, and the road is ready, after drying out, for travel. It may be again emphasized that only enough of screenings should be used to fill interstices and bond the road, leaving no surplus on top.

CLAY IN ROAD MAKING

Clay is the most satisfactory when left out of road making; in fact, it will not stay in macadam road: when wet, it will come to the surface almost as quickly as soap grease.

TELFORD FOUNDATIONS

Telford foundations, even though made exactly as prescribed by the inventor, cannot be as stable as those made of macadam, because of the unequal bearing of the stones relatively with each other on their beds. Macadam comes nearer to it, in addition to its better bond.

ROADS AND ROAD MAKING

John Dunbar, Rochester, in American Park Superintendents' Bulletin

Roads and road making have been so thoroughly discussed in this Bulletin, that hardly any more of importance can be added. I am pleased, however, to notice that Mr. Pettigrew states that "for ordinary park use a road of six inches in thickness of road metal when rolled is ample, provided the sub-bed is properly made." In some of the park systems of this country, Telford Macadam roads have been constructed of eighteen inches in thickness. The cost of this is so great, that to suggest it in some cities for park roads is at once prohibitory. Our Boston friends have the best park roads in the country, and if that desideratum can be accomplished by Mr. Pettigrew's concise and clear statement of "how to do it," good park roads can be built to a considerable extent without indulging in lavish expenditures.

In Highland Park, Rochester, an experiment was tried in 1892 with grass walks. There is a shrub collection on a southern slope on which walks were graded ten feet in width. As most of the grades were quite steep, it was a problem how to construct walks cheaply that would not wash or erode in rains. We decided to sod them, and as the walks have now been in use ten and twelve years, we can emphatically say that the grass walks in question have been most successful and satisfactory. They are kept closely mowed, and they are wide enough, so that there is no tendency to make "beaten tracks." At some points where people enter the collection, and where traffic is congested, of course the grass wears out and needs renewing in two or three years, but these areas are very small. In a moist season like the present, the appearance of these grass walks is very pleasing, and women particularly are fond of walking on them.

At the Arnold Arboretum, Dr. Sargent has been establishing grass walks, which are kept closely mowed, and as they wind through the woodlands and the large collections that comprise that magnificent living museum of trees and shrubs, they answer the puropses of accessibility, unobtrusiveness, and simplicity.

J. F. Foster, Chicago, Ill., in American Park Superintendents' Bulletin

Park roads are regrettable necessities. Do not multiply the necessities for them by introducing extraneous attractions into the park. Simplicity is always beautiful, and above all things the simplicity of nature. Let your park be a piece of country, your roads only ways to reach its beauties, mostly roads through thick woods, closely planted upon both sides hidden. There are open roads enough in the approachng boulevards. There let the peacocks of fashion who drive only to be seen disport themselves. Make the roads in the parks the quiet peaceful ways of the lovers of nature, and those who travel them will find themselves approaching near and nearer to the truest pleasure of life — the full appreciation and enjoyment of the wonderful beauty which nature has so lavishly strewn all about us.

OILED ROADS

J. W. Duncan, Boston, in American Park Superintendents' Bulletin

During the season of 1903, an experiment with oil was tried on a section of the Arborway near Franklin Park. The first work done was to spread a layer of coarse sand or fine gravel over the hard surface. Stone dust was also used on one section, and before sprinkling with oil the whole was gone over with the steam roller to make a smooth surface. The length of roadway sprinkled was 840 feet, the width of roadway being 34 feet between the gutters. Twenty-five barrels of oil were used, or nearly 1½ gallons per linear foot of roadway. The oil was heated almost to the boiling point in a large kettle, to make it run easily, and sprinkled with common watering pots. The total cost of this experiment was $130 for oil, gravel, and labor. The section covered with stone dust did not prove so satisfactory as that covered with coarse sand to a depth, say ¾ inch. This work was done the first week in September, and no sprinkling was done on this section of roadway till almost the end of July: but, of course, for about three months in winter it was covered with snow. During all the fall, spring, and early summer the dust was laid perfectly. The sand on the surface of the roadway formed a fine even cushion, which was very pleasant to drive on.

The odor, especially night and morning, was very objectionable, and a great difference in the growth of the shrubbery, especially roses, immediately along the side of the driveway was noticeable; whether from the oil or other causes, the summer growth was not so strong and healthy as on other sections of the parkway.

Watering was commenced again on this section about the end of July, but for two months had to be done very lightly as compared with the other parkways. The period over which this experiment lasted extended seven months. As before mentioned, the total cost was $130. The cost of watering during the same period would have been about $100. The advantage of the oil treatment, however, is that the dust is laid perfectly day and night, while under ordinary sprinkling with water, even under the most careful management, there are times when the dust cannot be controlled. Again, had the oil experiment been continued, the succeeding treatments would have cost very much less, as not nearly so much oil would have been necessary, and the gravel was still in good condition, so that the cost of oiling for the second season would have been perhaps only one-quarter that of the first.

GROUP OF CONIFERS

Herewith is a view of a group of small spruces as planted on the grounds of J. M. Moon of the William H. Moon Company at Glenwood Nurseries, Morrisville, Pa. These small evergeens used in this manner add a stately dignity to residential grounds, impossible with any other material and the demand for such is far in excess of the supply. The Colorado blue spruce seen on the left of the group holds its distinction in all kinds of company, at all seasons of the year. At the prices at which they are now offered, they are within the reach of everybody.

FOREST PLANTING IN NEW HAMPSHIRE

From Report of Forest Conditions of Northern New Hampshire, by Alfred K. Chittenden, M.F.

Forest planting upon wholly denuded lands, or to supplement incomplete natural reproduction, is already profitable in New Hampshire, when land can be protected from fire. The best species for planting are white pine, Norway pine and Norway spruce. The white and Norway pine are adapted to the sandy soils, the Norway spruce to the loamy soils. The latter is preferable to the red spruce, because it grows more rapidly, makes a larger tree, and yields the same quality of timber. At least 1200 trees should be planted to the acre, which makes a spacing of about six feet each way. The expense of planting, including cost of plants, should not exceed $8 per acre when the plants are grown from seed or purchased at cost.

It is recommended that the State establish and maintain a forest nursery, under the direction of the State forester, and distribute seedlings and forest tree seeds at cost to farmers and others who may desire to plant. By offering encouragement in this way large areas of waste land suitable only for forest can be rendered productive.

"The life of the husbandman — a life fed by the bounty of earth and sweetened by the airs of heaven."

DOUGLAS JERROLD.

Some of Burbank's Achievements

Edwin Lonsdale before the Florists' Club of Philadelphia, May 2, 1905

Mr. President and Fellow-Members: Very entertaining articles are being prepared for the magazines these days, one of the most elaborate being by W. S. Harwood, which appeared in the March and April numbers of the *Century Magazine*. There is no doubt that Mr. Harwood is correct when he says: "To-day Mr. Burbank has become the foremost man in the world in the production of new and interesting forms of fruits, trees, flowers, vegetables, grasses and nuts."

Mr. Burbank, when he had made up his mind to make the improvements of vegetation his life work, had the good judgment to make California his home and the scenes of his world-famous experiments and triumphs.

"His recognition has been tardy, but last year more than six thousand men, embracing among them the very pick and flower of the scientific life of two hemispheres, made the pilgrimage to his Santa Rosa home to study the lines of his investigations, to see with their own eyes many things which their scientific minds could not accept as truth without visual demonstration, and to learn some details of the supreme results achieved. During the year, thirty thousand letters were received, coming from every quarter of the globe, asking for more light upon his work. The Carnegie Institution has recognized his worth in a substantial manner, by granting the sum of $100,000 to be made available in sums of $10,000 each year for ten years." This will be a great aid in carrying out the many experiments he now has on hand, and it is to be hoped they will be carried to successful conclusions.

What apparently at this time will in the future be considered Burbank's greatest achievement is the development of the thornless cactus, which is botanically an opuntia and commonly called the "Prickly Pear." For a period of over ten years he has worked with the utmost persistence and skill until at last he has developed a cactus plant that will convert the desert into a garden. "He has not only made it thornless," so says Mr. Harwood, "but he has made it adaptable to any climate." This we can readily believe, "as it will thrive on the hot desert and it will grow with marvelous fecundity when irrigated or when planted in rich soil." Its great value as an article of food for cattle will in truth make the desert smile.

The tenacity of this class of plants is well known to all plantsmen. "And some of the fruit of this prickless pear is possessed of a flavor hitherto unknown, having a combination of the flavors of half a dozen fruits variously suggesting pineapple, melon, peach, apricot, but yet without definition or identification. It is full of nutrients, too; in fact, it has been found that the natives of some southern climes virtually live upon the fruit of one of the crude parents of this wonderful plant. It is stated that one of the more highly developed plants, grown to almost gigantic stature in three years, has over six hundred pounds of nutritious food for man and beast upon it, and as one looks upon this one plant and thinks of the vast multiplication of it now possible, you begin to realize of what is likely to come to pass in the reclamation of the waste places of the earth.

This cactus now becomes a definite practical food. It may be eaten raw or cooked. The leaves may be put up and preserved as are ginger or melon rinds or citrus. They may be eaten in a variety of ways, while the fruit itself will prove one of the delicacies of the market.

The new variety preserves its type, never reverting. There is apparently no disposition to go back to the original.

Mr. Burbank has done much among the poppies. He has succeeded in crossing an annual with a perennial, and some of the flowers are said to be ten inches across. The species operated upon were the Oriental Poppy, Papaver orientalis as pollen parent, and the opium variety (P. somniferum) as seed parent.

Another of his achievements was the creation of the fastest growing tree in the temperate zones of the world — a walnut which in thirteen years has grown to six times the size that an average walnut has grown in twenty-eight years. The shells of this walnut were bred so thin that birds could pick holes in them, so that it became necessary to reverse the prosess, breeding back until the shells have become of the requisite thickness.

The plum-cot, another achievement, is a combination of the common American plum, a Japanese plum, and the common apricot, producing a fruit, unknown to the world before, with a delicious flavor unlike either of its ancestors, and plentiful in nutrients, and beautiful in color. Incidentally, the plum-cot with the primus berry, disproves the dictum of scientists that new species cannot be produced by man.

Amaryllis blooms ten inches in diameter of excellent coloring are among his products; also new types of gladiolus, some with the flowers set all around the stalk and not all on one side as is the case with the original well-known type, but whether they will rank with the new type raised by Groff, can only be determined by a comparative test. A dahlia with the perfume of the magnolia is another of his achievements.

The Shasta daisy and its varieties when first sent out seemed to be a disappointment, but now it appears to be giving better satisfaction. Mr. Harwood apparently confounds the English daisy with the common field daisy when he says the "tiny field daisy." It is not so very tiny, whereas the English daisy may properly be called tiny, and botanically one of the parents of the Shasta daisy is a chrysanthemum C. leucantheum —whereas the English daisy is a Bellis.

Another creation under way is the Pomato, which may be called a tomato growing upon a potato. This has been done in days gone by, by others by grafting a tomato upon a potato, but Mr. Burbank's pomato is being produced presumably through the more legitimate way of crossing and seeding, and selection.

Great things are expected from Mr. Burbank's improvement of the Australian Star Flower. Seed of the original has been offered by most of the leading seedsmen this year. It is bright pink in color and fragrant, and the flowers are said to retain their form and coloring almost indefinitely and are recommended to be used on ladies' hats in millinery.

A new type of larkspur he has established, much enlarged, with a delicious odor, and the color combinations are far finer than the common larkspur. It would be interesting and instructive to see these and some of the greatly improved European forms grown side by side.

In referring to the white blackberry, it is said by Mr. Harwood that Mr. Burbank chose one plant out of sixty-five thousand and this was the Iceberg blackberry. It would be interesting to know whether Mr. Burbank made an effort to produce a white blackberry, or was it what is called a sport. It appears to me that the Iceberg blackberry was an accident, for I do not know of anything in that line to work on that would be likely to give the results as they are.

Mr. Burbank has accomplished great things with the plum; mostly all of those so-called Japanese are the results of his manipulations. He has now three hundred thousand distinct varieties of plums; sixty thousand peaches and nectarines, five to six thousand almonds, two thousand cherries, as many pears, one thousand grapes, three thousand apples, twelve hundred quinces, five thousand walnuts, same number of chestnuts, with many thousands of other fruits, flowers, and vegetables, which he is working on to improve.

Mr. Harwood relates very entertainingly how Mr. Burbank was walking one summer evening through his experimental grounds past a bank of verbenas — a scentless sort which he was breeding up into a finer variety. On this occasion he was attracted by a faint, sweet odor from the bed; he tried to locate the flowers emitting the perfume, but was unable to do so. A year later, passing by the bed, he was again attracted by the odor which suggested that of trailing arbutus.

"With his characteristic patience he went over the plants one by one until, at last, he found the one that had the elusive odor. It was at once isolated, and its seeds were saved and planted with great care. Succeeding sets of seeds were planted, year by year the plants were challenged. The scent became more and more pronounced, continuing in its likeness to the arbutus, and becoming, at last, greatly intensified."

No doubt at all this is quite true, for it is no new thing to have fragrant verbena flowers. In the days when verbenas were more generally popular than they now are, some of the cultivated varieties at that time produced flowers with a decided odor, and in the evening it was when these flowers gave off their scent, which was truly suggestive of the trailing arbutus. I have not grown verbenas for many years, but as I remember them, some varieties were absolutely without fragrance, whereas others were decidedly sweet. While the color may not have influenced the odor, there were colors which were more likely to be scented than others. The scarlets and bright pinks were generally scentless, while the purples and whites most often had the arbutus-like smell. And again, if my memory serves correctly, there were many variations from that rule.

It will be remembered that Mr. Harwood, in introducing the verbena subject, stated that Mr. Burbank passed a bank of verbenas — a scentless variety — from which we might infer that he knew there were other varieties which were fragrant, but he did not say so; hence I have taken the liberty of mentioning the fact that there are many varieties already in cultivation which are quite fragrant.

Mr. Burbank has promised us a blue rose, "when he has time." I have heard it said by some florists that at certain periods of the year there are too many blue roses already. Let us hope that Mr. Burbank has in his mind's eye, when he has time, a blue rose, with the typical forget-me-not blue or with the hue of the Delphinium formosum, for nothing short of either of the two shades of blue, or something intermediate between them, will satisfy us.

Mr. Burbank has increased the size of the flower of a sedum, but which of the numerous species and varieties in cultivation is not stated. He has raised a pampas-grass with pink plumes, but what is the shade of pink? Is it the color of carnation Enchantress, Scott or Lawson? It would be interesting to know.

Great things are expected from a new

hybrid tobacco, which is stated to be much thriftier and better adapted to colder climates and finer in flavor than the best tobacco now grown.

Some statements are made to the effect that thirty-six apples, no two alike, were all grown from the seed of one apple. There is nothing unusual about that. It would be strange if the results had proven to be otherwise. Mr. Harwood evidently is not very familiar with grafting fruit trees, for he says: "In grafting apples, the same tree is used often year in and year out, as many as four hundred apples growing on the tree at the same time." What is the idea he wished to convey in that statement? Four hundred would not be a large crop of apples on a large tree. Let's go on further. "Sometimes other fruits are grafted upon the tree, so that there may be five hundred varieties of fruit growing at once from the parent tree." Great Scott! I wish Mr. Harwood had taken the time to name a few of the "other fruits" grafted on the parent tree. I believe it is possible to have five hundred varieties of apples on one tree if there were that number of twigs to graft upon and that number of varieties to graft. The so-called parent-tree could only be a foster parent at best.

The elæagnus fruit has long been used for preserving, and it is good news to know that Mr. Burbank has added this to his other triumphs by improving same. The English walnut has had the bitter skin bred out of it, and the size of the kernel and the whiteness thereof have been increased. Good news.

Here is a paragraph hard to understand: "In passing, it may be noted here that Mr. Burbank has accomplished that which Darwin hinted at, but accepted with reservations — the grafting of one tree upon another and at the same time the transformation of the tree without fertilization, the accomplishment of a complete cross by the graft. He took a French plum unknown in America, and grafted it upon a Japanese plum. The graft bore no bloom, but the tree was recreated, if you will, yes, but will we? Its seedlings took on a wholly new life and became hybrids, its vital essence was changed through the medium of the graft."

There is nothing at all difficult in grafting a French plum on a Japanese plum, even if the French plum was unknown in America. Here is something hard to understand. "The graft bore no bloom." Yet its seedlings took on a wholly new life and became hybrids! Where did the seedlings come from if this new creation bore no bloom? How could there be seedlings if there was no seed? There could be no seed if there was no bloom. If there were no petals, there must have been a pistil and stamens or there could have been no fruit, no seeds, and consequently no seedlings. Something very important has been left out in what Mr. Harwood has been trying to elucidate. It is possible that the combination of the saps of the French and Japanese plums has caused the resultant tree to produce a shoot that was different from the stock in this case (the Japanese plum), and the scion of the French plum, the French plum which was unknown in America, and this shoot would be called, generally speaking among ourselves, a sport, and in due course this would be increased in numbers by grafting or budding or cuttings and these would produce the flowers and the fruits and the seeds and eventually the seedlings, and that, as it appears to me, is the only way the seedlings would come. If this is what Mr. Harwood means, here is a case where a plum tree has been induced to sport through grafting. I read somewhere sometime ago that the white form of the H. R. Rose Baroness Rothschild called Mabel Morrison was the result of the tea rose Niphetos being budded on the Rothschild, causing it to break and produce a shoot that bore white flowers; hence a sport, or, as Darwin would say, "a bud variation."

Another change Mr. Burkank has made in flowers, but this was not mentioned by Mr. Harwood in his *Century Magazine* articles, was in the aquilegia, commonly called the columbine. By repeated selection he has fixed a type with the spurs eliminated. I must own up that I have not seen any of the flowers of these new types, but I confess I am prejudiced against this new innovation, because the long spurs appeared to me always to add greatly to the grace of the unique flowers of the columbine. Let us hope that this is a case where they have to be seen to be appreciated. It however goes to show what may be accomplished by persistent, well-directed effort with a worthy ideal to look up to and aim for.

Many of the achievements with which Mr. Burbank has been credited have been done by others. This is not said to detract from the wonderful work he has done, but to show how slow the people have been in coming to a realization of what has been going on among horticulturists, florists and gardeners in the improvements in plant life. For instance, when the Chinese primrose was introduced (about the year 1820 I think) the flowers were not larger than a nickel and a poor washed-out pink in color; now they are larger than a silver dollar, and have been so for over twenty years, both single and double flower, and they come in nearly all the colors of the rainbow. Anyway, we can have them in the national colors of red, white, and blue, with numerous intermediate shades. All know what has been done with the carnation within the past ten years, and with these important improvements in flowers, so far, Burbank has had nothing to do.

"Mr. Burbank has greatly increased the geranium (zonal pelargonium is meant, I believe) in size and at the same time has made it far more brilliant in color." This statement is most interesting, or at least as Horace Greely would say, "interesting if true." Illustrations of an old variety are given and the new one enlarged in form illustrated for comparison, but it is questionable whether Mr. Burbank's zonales are any larger than are those to be found in an up-to-date florist's establishment, and if he has any varieties more brilliant scarlet in color than an old French variety named Le Pilote and a Philadelphia variety known as Dennison's Seedling, I know most of us would not only like to see such an one, but we would also like to own at least one.

But all honor to Mr. Burbank and all honor to Mr. Harwood and those who have eventually recognized the good work he is doing and the hope for his still greater achievements, and all honor to the newspapers and magazines which have spread broadcast the knowledge of the possibilities of improvements in all vegetation, and here's hoping the same may awake some kindred spirits and kindle an unquenchable enthusiasm to aid Burbank in the grand work now going on.

A pure white Dendrobium phalænopsis is the prize which Julius Roehrs Company has shook out of an importation of inferior-looking plants. This is, so far as known, the second plant only in this country of that variety.

AT A SACRIFICE

SURPLUS BULBS

FOR SPRING PLANTING

	100	1000
GLADIOLUS		
Augusta The best florists' pure white variety in existence. Selected bulbs throw three flower stalks, each branching in candelabra form, with two and three heads of bloom.

PHILADELPHIA NEWS NOTES

August Muller will add one new greenhouse in July to his already extensive range.

Miss Baker of Media has resumed possession of her greenhouse establishment. The renting out proposition was not a success.

Julius Wolff, Jr., will build a new greenhouse this summer, especially for the growing of orchids of which he has quite a collection of the commercial varieties.

The pipe warehouse of C. J. Rainear & Co. at 518 Arch street, was visited by fire recently; considerable damage was done, but same was fully covered by insurance.

William J. Young has sold his greenhouse property at School street and Pulaski avenue to his son William J., Jr. A handsome new salesroom fronting on School street is a feature of the new ownership.

F. W. Bornemann is the new owner of the Rementer greenhouses at Lansdowne. He is superintendent of the Arlington cemetery. The general opinion seems to be that Mr. Bornemann got a big bargain at the sale.

H. Bayersdorfer sails on the *Deutschland*, May 25, on his annual trip through the producing centers in Europe. His firm is noted for its up-to-date introductions in jardinieres, baskets, and other florists' supplies and this trip will be devoted mainly to looking up novelties in that line.

William Berger is what President Roosevelt would call a credit to his country. He has raised a family of seven sons and three daughters, six of the sons being in the florist business. The old homestead on Queen street is run by the father; a retail store at Main street and Chelten avenue is operated by four of the sons, while the other two boys run the commission house of Berger Bros. on Filbert street. Mr. and Mrs. Berger, Sr., will soon celebrate their thirty-eighth wedding anniversary.

THE STRIKE SITUATION IN CHICAGO

The following important card has been issued:

The Chicago Wholesale Florists' Association which organized to facilitate the shipping orders during the teamsters' strike period, guarantees prompt delivery in time for all out-going trains. The cut-flower supply in Chicago is fully equal to any demand, and every concern is now filling all orders. F. F. Benthey, president; C. M. Dickinson, treasurer; J. Risch, secretary; Fred Lautenschlager, general manager of transportation.

BUSINESS CHANGES

F. Albert, one of Rochester's (N. Y.) leading florists, has discontinued the retail business, and closed his store on East avenue, last Tuesday.

Charles H. Wilson, 606 Jennings Avenue, Cleveland, O., has purchased the fixtures of the Cleveland Floral Co., which has gone out of business.

CUT-FLOWER MARKET REPORTS

BOSTON Low prices prevail all through the cut-flower list and all other symptoms of a very quiet market are in evidence. Roses are not badly overstocked, so they clean up fairly well. Carnations have to depend on the street merchant to keep the surplus down, which he does by singing the song of "twelve for a dime" on all the populous thoroughfares. Lilies are in bad shape, nobody wanting them. Bulbous stock is in the outdoor class and consequently common and cheap. Sweet peas are very plentiful. Lily of the valley in moderate call.

BUFFALO Trade opened on Monday with a larger supply of all flowers than could be disposed of, therefore everything took a drop in price. Carnation alone held firm till Thursday, when a sudden break took effect. Lilies can hardly be disposed of at low prices. Outdoor bulb stock has made its appearance in quantity and does not move as fast as desired.

Since violet season is over, sweet peas are in more demand and are selling rapidly at fair prices. As for roses, carnations, mignonette, lily of the valley, etc., a good supply is being received daily and trade continuing fair.

CHICAGO There is a generally steady tone to the cut-flower trade. The receipts have grown smaller, and under ordinary conditions, would have been considered a light supply, but in the present state of trade, ample for the demand. The fact is that the market here has been in very bad shape and the local requirements have been affected by the great teamsters' strike. This was well illustrated in this week's trade.

The rose supply is a tremendous one, although good quality predominates. Carnations continue plentiful. Lilies are a drug. An abundance of out-door stock is seen — peonies taking the lead — and are now to be had in all colors. Parrot tulips "Stollery's special," and Narcissus Emperor constitute the bulb supply and a good demand is noticed. The supply of outdoor lilac has been very light on account of labor trouble in Chicago, express companies refusing perishable goods at point of shipment unless an order releasing the carrier from all claims is issued by shipper and receiver.

All out-of-town orders are generously filled and schedule delivery is guaranteed by the Wholesale Florists' Association which organized to facilitate shipping orders during the strike period. F. F. Benthey is president, C. M. Dickinson, treasurer, J. Risch, secretary, and Fred Lautenschlager, general manager of transportation.

CINCINNATI Business for the past week was very slow. Stock is coming in very heavily in all lines, especially Harisii and Longiflorum lillies. These varieties have moved slowly and at a price which hardly justified the growers to cut them. Roses and carnations are arriving in large quantities and moving slowly. The outlook for cut stock for June is anything but satisfactory, with the present conditions of the market.

NEW YORK The somewhat improved condition of the cut-flower market, at the beginning of last week slowed down to dullness during the latter part with lower prices generally prevailing. This week the inactivity remains and there is no business worth making special note of in any line. American Beauty roses of the first class sell, also the best of other varieties, but the general quality is getting poorer. Bride and Bridesmaid sell better than many of the so-called novelties such as Killarney, Deegan, Carnot, and Testout, quality being equal. Lily of the valley is overstocked and dealers are cutting figures. Carnations, while rather slow, have experienced no marked cut in prices yet.

PHILADELPHIA Business was very sluggish last week and stock very plentiful — a combination which is always sufficient to give the distributor a headache. There was considerable funeral work, but weddings and other functions were few and far between. Beauties went better than some of the other roses although very plentiful. A few Chatenays made their appearance for the first time this season and sold fairly well. Carnations plentiful and prices very low. A few violets coming in yet, but demand is almost nil. Cattleyas are fine. Demand for same is only fair, but will undoubtedly improve as commencement season approaches, and June weddings. Lily of the valley in good supply and up to standard quality; goes better than the general run of stock. Plenty of lilac, dogwood, apple, Judas, and other outdoor blossoms now to be had, and being extensively used by the trade, which of course has a tendency to cut out sales of other stock.

It is expected there will be plenty of peonies and other out-door subjects for Decoration Day in this latitude. Some of the wholesalers wish it otherwise as they would rather sell roses and carnations. Easier to handle and more money in them. Growers should be careful to cut peonies before they are fully open. They open out purer and keep longer than if left to open full on the plant.

CUT-FLOWER NOVELTIES IN CHICAGO

Spanish iris at Poehlmann Bros. Chicago's favorite peony "Old Rose" has put in its appearance at Kennicott's. McKeller has Catteleya Mossiæ. Pansy "Lord Beaconsfield" is offered in large quantities by the E. F. Winterson Co. Rose Rosalind Orr English can be had in limited quantities at Peter Reinberg's. "Wietor's Red" a grand carnation seedling grown by Wietor Bros. is at present commanding the attention of the leading carnation experts. Salopian is the most popular sweet pea obtained hereabouts.

OF IMPORTANCE TO VEGETARIANS

The secretary of a rural English society for the propagation and advancement of agriculture the other day received this letter: "Sir — I particklly wish the satiety to be called to consider the case what follows, as I think it mite be maid Tranxtionable in the next Reports. My wif had Tombd Cat that dyd. Being a torture shell and a grate favrit, we had Him berried in the Guardian and for the sake of the enrichment of the mould I had the carks deposited under the roots of a Gotsberry Bush (The Frute being up till then of a smooth kind). But next Sesons Frute, after the Cat was berried, the Gosberries was all hairy, and more Remarkable, the Catpillers of the same Bush was Al of the same hairy Description."

Here is a method by which we may extract the virture of the animal kind. The animals live, they have their day. In the end we have their substance with the assurance that we come honestly by it. We have not caused the animals a single pang or a tragic death. And we might as well have their substance as let it waste away to nothing. No; here is economy, here is poverty. How much more pleasure in the eating of a peach if we know that its down has come from the beautiful swan over whose octogenarian grave the fair fruit has ripened — *Boston Transcript.*

INTERNATIONAL PROTECTION OF TRADE-MARKS

From the Report of United States Consul Haynes, Rouen, France

The protection of trade-marks is of such importance that several countries, France among them, have formed an international service of registration. The institution has its sittings at Berne, in the offices of the Industrial Protection Union. Its object is to give the same protection in all of the contracting countries as is given to the owner of the mark in his own country. The contracting countries are Belgium, Brazil, Spain, France, Italy, Netherlands, Portugal, Switzerland, and Tunis.

A decree dated May 20, 1903, stipulates that every owner of a trade-mark regularly registered in France who desires that his work be protected in the contracting States, or those that may hereafter subscribe, must pay into the Central Receiving Bank of the Seine, or, in the departments into the bank of the "Général Trésoriers-Payeurs," the sum of 25 francs ($4.82). The payment of this sum, which should be addressed to "l'Office National de la Propriété Industrielle," 292 rue St. Martin, Paris, should be accompanied by the following précis: (1) A request to obtain the registry of the mark at the international office at Berne, accompanied by the name, profession, and address of the applicant and the date and number of registration of the mark in France; (2) three copies of the mark, and in case of colors four copies, designating the exact color; (3) a stereotype plate not less than 45 millimeters (1.77 inches) reproducing exactly the mark (this plate will be filed in the International Bureau); (4) the receipt for a post office money-order to the bureau at Berne for 100 francs ($19.30) for a single mark, and for 50 francs ($9.65) for any thereafter; (5) a power of attorney duly registered if the demand is made through another party.

A fulfillment of these formalities procures protection in the nine countries mentioned, as well as in all other States that may later adhere to the programme. The duration of protection is twenty years, a renewal being allowed by the fulfillment of all the conditions as in the first instance.

For the first mark registered in France alone 125 francs ($24.13) must be paid, and 75 francs ($14.48) for each one thereafter. In all the other contracting States named for each trade-mark registered the cost is 240 francs ($46.32). This latter sum embraces the official cost, exclusive of the expenses of application, authentication, translation, etc.

It will be seen that the services of the bureau are of considerable value both as to price and simplicity, not to mention the great advantages to be derived. All information is furnished gratis by the Bureau International de la Propriété Industrielle, Berne, Switzerland.

SEED TRADE

The counter trade at Dreer's, Michell's, and Johnson & Stokes, the three principal counter trade stores in Philadelphia, is reported as still brisk, although the orders now are much smaller. Customers are as numerous as two months ago and they are even harder to satisfy, are stocks as much depleted.

SALE OF BOILER TUBES

Sixteen carloads of fine 4-inch tubes, suitable for use of Greenhousemen and Florists. They are rattled and are heavy tubes, just what you need. We can make quick delivery. Hammond's Slug Shot for Potato Bugs, Currant Worms, Etc.

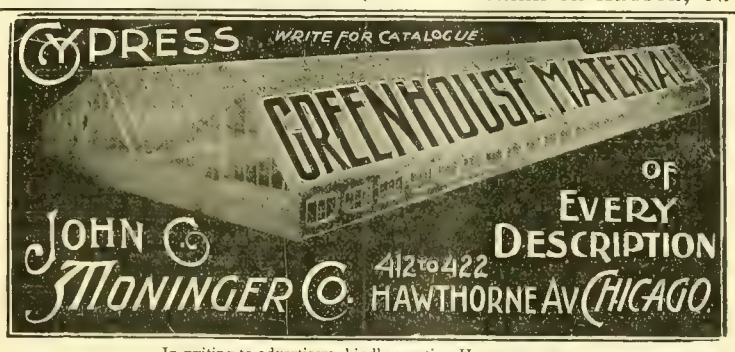
Sold in large or small lots.

Report of a Critical Test of Hammond's Slug Shot, etc.
MADE IN 1904



James Lawrence **EDEN TRIAL GROUNDS** J. R. Lawrence
1896
SPECIALTIES, SWEET PEAS AND POTATOES

DEAR SIR: Have been delayed in reporting on goods you sent me for trial by severe illness. SLUG SHOT was as good, and did the work it was advertised to do as well and effectively as compounds and mixtures costing double and triple the price asked for it. For potatoes it proved especially efficient. Your BORDEAUX PULP is all right, dissolves readily and minutely so it does not clog nozzles of finest sprayers. Your AMMONIATED COPPER SOLUTION saved my melon vines (musk). It was not a case of preventing blight, but of checking it after it had developed and to quite an extent. I shall be glad to use and commend your goods another season.

Yours truly, (Rev.) J. REYNARD LAWRENCE,
Nov. 21, 1904. North Middleboro, Mass

We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

Dreer's Hardy Perennials FOR SUMMER CUT FLOWERS

If you are not interested in a general line of Hardy Perennials, but have use for summer cut flowers you should consider at least the following leaders, which are the cream of the best sorts for summer cutting; you will find them profitable for this purpose as well as being an attraction to your grounds.

We have a large stock and the plants offered are all of such size that they will give the best possible returns. For a complete list of this class of plants as well as all other seasonable stock see our Current Wholesale List.

HARDY VINES AND CLIMBERS

CLEMATIS INTEGRIFOLIA DURANDI

Iron Cross Clematis. The steel blue flowers grow in the form of the famous German Iron Cross, measuring 3 to 4 inches across in a dense form intermixed with the buds. A very robust and vigorous grower, although of semi-dwarf habit. Blooms from early summer until late fall. 4-in. pot plants, 50c. each; $5.00 per dozen.

CLEMATIS
JACKMANNI HYBRIDS

Duchess of Edinburgh. Double white.
Henryi. Large single white, very large flower.
Jackmanni. Dark, royal purple; most popular single variety.
Mme. Baron Vallard. Light rose.
Sieboldia. Lavender.
The Gem. Deep lavender, blue, very fine.
Gipsy Queen. Fine dark single purple.
Imported three-year-old, open-ground roots, 50c. each; $4.00 per doz.; $30.00 per 100.
Imported two-year-old pot-grown. 40c. each; $3.00 per doz.; $20.00 per 100.
American-grown one-year-old field roots. $2.00 per doz.; $15.00 per 100; $125.00 per 1,000

OTHER CLEMATIS

Clematis paniculata. Strong four-year-old field-grown plants. 25c. each, $2.00 per doz; $15.00 per 100.
Strong three-year-old roots. 15c. each, $1.50 per doz.; $10.00 per 100.
Strong one to two-year-old roots. 10c. each, $1.00 a doz., $7.50 per 100.
Clematis coccinea. A handsome variety, producing an abundance of large rosy-scarlet, bell-shaped flowers, which are exceedingly handsome and most useful for all sorts of decoration. Blooms from June until frost. Quite hardy. 10c. each, $1.00 per doz., $7.00 per 100
Clematis crispa. Much like coccinea, but producing very fragrant lavender flowers, tipped white. 10c. each, $1.00 per doz., $7.00 per 100.
Clematis Davidiana. Dwarf, herbaceous sort, growing about 2 to 3 feet high, covered with deep blue flowers in clustered heads also singly in leaf axils. 1-year old, 2½ in. pots, 8c. each, 65c. per doz., $4.00 per 100; $30.00 per 1000. Two-year-old, open-ground, 10c. each, 75c. per doz., $5.50 per 100; $50.00 per 1000.

BIGNONIA (Trumpet Creeper)

Grandiflora. Strong plants, 35c. each; $3.50 p. doz.
Radicans. Strong plants, 20c. each, $2.00 per doz.

WISTARIA SINENSIS

Blue. Open-grown; extra strong, 4 ft. plants, 40c. each, $3.00 per doz., $20.00 per 100.
White. Open-grown, extra strong, 4 ft. plants, 50c. each, $3.50 per doz., $25.00 per 100.

HONEYSUCKLES

Extra strong field-grown plants, 4 to 6 ft. vines in variety, 50c. each, $4.00 per doz., $30.00 per 100
Variegated: Halleana, yellow; Germanica, white; Germanica, red; Belgica, red; Scarlet Trumpet; Yellow Trumpet.

HARDY ENGLISH IVIES

Strong 4 in pot-grown cut back). $1.00 per doz., $7.00 per 100, $65 per 1000.
Field Grown. 2 ft. vines, strong plants, $1.25 per doz., $8.00 per 100. 2½ in. pots, 30c. per doz., $2.50 per 100; $20.00 per 1000.

AMPELOPSIS VEITCHII

Sometimes called Boston Ivy and Japan Ivy 3 to 4 ft. high. Extra strong, imported roots, many vines, 20c. each, $1.50 for 10; $12.50 per 100. 2 to 3 ft. high, strong roots. $1.25 for 10; $10.00 per 100.
Well established 5-in. pot plants, 30c. each, $3.00 per doz., $22.50 per 100.

ARISTOLOCHIA SIPHO
(Dutchman's Pipe Vine)

We offer an extra fine stock of this most useful hardy climber in extra strong vines, 2 to 4 ft., 50c. each, $5.00 per doz., $40.00 per 100.

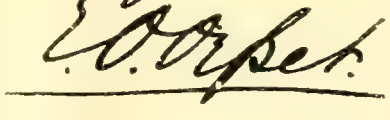
Cypripedium Fairieanum

There is no member of the very large genus cypripedium that has left its impress in so marked a degree on its progeny as the subject of this notice. This is especially true in primary crosses, but also in secondary results; that is, where one or both parents of a seedling were themselves of garden origin. As complete a list of these is now being published in the "Orchid Review" as it is possible to get together, and we begin to realize how much we owe to this beautiful little plant — a pearl without price to day — for the reason that a plant cannot be purchased. We learn from the same source that there are but five small scraps in cultivation to-day, one in England and four more on the continent.

It is passing strange that for at least twenty-five years this little gem should be a constant occupant of gardens, lending itself happily and freely to the magic of the hybridizer's wand, and then — when orchid culture had reached its zenith as regards knowledge of the needs of the plants are concerned — to practically disappear from collections. Seemingly this is a paradox, but there are two possible solutions: it was in such demand by hybridizers, and by them used to such an extent, as to weaken the vitality of the individuals, and every effort also was made to increase the stock by division, a process that very few orchids submit to as did C. insigne Sanderæ, consequently the plants were killed by attention of the wrong kind.



It is a well-known fact that plants of this beautiful cypripede were extant in this country and also that they thrived vigorously. During the time Pitcher & Manda were dealing in and raising orchids they possessed plants, for they raised at least three crosses that had C. Fairieanum for a parent — C. × Edwardii and C. × Constableanum — both of which were new to science, and a lot of C. × Niobe. Another cross was raised at North Easton, Mass., and was named C. × Mrs. F. L. Ames, this now being known as C. × Amesiæ.

C. Fairieanum was also splendidly grown by the late Mr. Hill, who had charge of the then famous Brewer collection at Newport, R. I., for he once offered to give a plant to a visitor that had eight growths; the visitor was a hybridist too, who well knew the value of the plant as a parent. An offer like that to-day, if it were made from the opposite side of the globe, would send many emissaries hot foot in its wake, each with a good round sum as an equivalent.

Doubtless there are many other facts regarding this lost orchid that could be gleaned concerning its history in the United States and many would be glad to learn of them now that the history of the plant is being tabulated, and the editor of Horticulture will gladly give space for their publication.

We say "lost orchid," for such seemingly it is at the present time, but we may awaken some morning to find our "Gardeners' Chronicle" at the breakfast table containing the news of its re-discovery in some recently adjusted corner of British India and then the scramble will begin, for it is exceedingly improbable that more than a few plants will be sent home, at least in the first importation.

Equally remarkable things have happened in recent years. It is not so long since I was admiring an almost priceless plant of the long-lost cattleya labiata, in the H. H. Hunnewell gardens, which was then in bloom, and well remember with what pride the late Mr. Harris pointed it out. In just a little over a year later, thousands of this same plant were offered at auction in New York, and remained unsold for the lack of bidders; plenty were sold at twenty-five cents a plant and some of these are in the charge of the writer now.

South American Horticulture

RIO DE JANEIRO

The capital of the United States of Brazil — Estados Unidos Brasil — is the most beautiful city of over a half a million population in the western hemisphere, although the city's business streets are narrow, dark and with an all-prevading warehouse smell. But once in Rio de Janeiro, we only need to take a few steps from the leading shopping street to the square at the landing piers of the ferries where the big rider statue of Don Pedro II stands, to see immediately that these shadowed streets, where no three wagons can pass are perhaps most important to the very existence of the city, its workshop, but never the dwelling place of Brazil's proudest citizens. You can see already from this point suburbs on hills around and across the harbor. You can then board one of the ferries, like many other inventions for transportation in this country, made by Uncle Sam; then a few dozen rounds of big side-wheels shove the boat away from the shore and "fata morgana!" you behold the mightiest artistic picture of an harmonic crescent-shaped city, the center rising in five distinct hills towering above lower rows of roofs and above each other and lifting into the sky white church towers and domes of public buildings, while the suburbs ends gradually descend in palm-covered swells, among which lay on broad avenues, elegant cottages and country estates, and finally lose themselves in both crescent ends among the orange groves

on the farther gold-sanded beaches. There, where the mountains on the south side of the city draw somewhat nearer to the ocean, granite rock ranges, topgrown with tropical forests, and gigantic boulders of impossibly natural, artistic shapes and reach into the ocean, now withdraw and then butt again and again around the south side of harbor, thereby almost closing its only entrance to the ocean. There looms up directly on the harbor entrance the famous natural tradesmark of one of Brazil's main products and exports — the "sugar loaf" rock, formed like one of the West Indian sugar hats, which were sold in the world's market during the last century in that form, creating the name of hat-sugar or loaf-sugar.

Slowly the ferry plies its way across the bay between a squadron of Brazilian men-of-war, which have their anchorage here, around the fiscal island, almost flat and entirely occupied by a red-rock castle-like government building. Farther south lie numerous islands, some used for fortifications and navy-yards, others green with forest, others bare granite rocks The green flag with its globe and its motto: "order and progress" — ordem e progresso — is everywhere conspicuous, as all merchantmen go farther into port to the north-east end of the city, where piers and docks lie behind high islands, so as to be discovered only by special search, but out of the landscape proper.

First we stop on a landing of one of the smaller residential towns across the capital and then we get to Nistoroy, the largest of the opposite towns. The country around Nistoroy is flat and level, the coast range receding some five miles, but numberless inlets and islands in never-alike circles and sizes give each place a distinct and individual character. Some are more pretentious, like the mansion of the late president of the Republic on the wide beach of Barreto, others more like spacious cottages, on points of prominence, a land tongue or some low hill back from the shore. Within an hour's walk you can touch virgin forests everywhere on the mountain slopes, where you will have to use a big cutlass among hianas and bamboos and mata-oleo to make entrance; but cultivated orange and banana groves with some fields of sugar cane amid, deceive the visitor successfully as to where wild nature, rural nature, and artistic garden nature commence and leave off. Like as the elm in New England or the cottonwood in Rocky Mountain States overtops the roofs of most country residences, so tower the crowns of oreodoxa or of attalea palms high over the country homes in Brazil and especially around Rio de Janeiro. On passing along the roads you use some of them as landmarks.

Some soft winds were rocking the blades of the palms in graceful circles forth and back like a welcome warning as I finally got up to one of the country estates, where I was called in to doctor some plantations of roses and to arrange some more groups of palms and flower beds. While I was looking up admiringly to those palms, there came crashing down just behind me an old dry leaf, twenty feet long, with an arm-thick shaft. The lower leaves will gradually get brown and bend down on the side of the trunk in time, from whence they come down butt-end first like an arrow, but luckily not with the quick gravity of wooden limbs, so that a person has time to jump out of danger, when he sees one descending. However, you have to be on guard for them in every Brazilian park after a rainstorm, where there are avenues of high palms. When I entered the place, some of the gardeners were planting a lawn, not seeding the grass, but planting pieces of a running couch grass, called grama by the Brazilians. This variety of graminea is a perennial of a coarse, thick growth, and not only withstands all hot sunrays but also by its thick massive root system keeps down most weeds. Piece after piece the whole lawn is planted like a flower bed; seeding down is said to be very tedious, unreliable and in most cases would be an entire failure. On the place were all kinds of roses, pure Brides and Bridesmaids, six feet high, as well as Kaiserin, La France, Souvenir de la Malmaison, Paul Neyron, Baroness Rothschild, etc., and I found all to develop very double and rich-colored flowers. Fine specimens of hibiscus forty feet in circumference, with red flowers of the size of sugar-bowls, others with elegant silver variegated leaves, others with pink flowers, and other handsome shrubs were grouped in the borders. On the lawns grew palms and exotics, cypress, araucarias, and dracænas, the last like small trees in the burning color of maples in a New England autumn. There were two huts surrounded by palms, built artistically out of natural limbs and covered with a palm-leaf roof in imitation of the old Indian huts and those of the earliest colonists, with immense tree trunks scattered all around and shaded shelves of fine adiantum, Begonia tuberosa, gloxina, etc., in pots and rare orchids and bromelias. This arrangement was a "happy thought": coming up on the walks you had the sensation of going into a rough "cut" — roça in Portuguese — of virgin forest; yet the walks lead smoothly around the dead trunks half overgrown again by artificially stimulated growth of vines and ferns; fine palms were sprouting up in intermediate spaces and when you bowed your head under the roof of the huts, you beheld instead of ferocious savages, fine cultivated plants, which gave testimony of a progressive civilization. The whole grounds were shaded by red acacias and attalea palms, thus giving a light shade all over the grounds, yet nowhere so dark as to be unfavorable to the growing of flowers and shrubs beneath them. The acacias are especially adapted for this purpose, their broad, spreading, but thin-foliaged branches giving shade like a cheese-cloth. Such a rich profusion of blossom, as these flowering trees display can hardly be matched in any other tree; Paul's scarlet thorns, perhaps being a not very close second. On the piazza stood big tubs of Nephrolepis Piersonii, bromelias on wooden logs, cacti and pandanaceæ. The park was surrounded by two orange and banana groves, between which was also situated a vegetable garden and a sugar-cane field, so you could pick a handful of strawberries, then go and cut a sugar cane and press your sugar then and there on your berries. Oranges are picked here like our best apples, with a short stem and often a few leaves left on them and costing from four to five cents per dozen in the market. Bananas are sold by the bunch, the ordinary varieties, fifty to seventy-five fruits in the bunch, and costing from twelve to fifteen cents, the red varieties being a trifle higher. All ordinary vegetables are grown with good results, and mature twice in every year, the first crop, sown in February and March, ripening in June, July, and August, the second sown in August and September, ripening in December, January, and February.

Gerhard Kleicken.

(Continued in next week's issue)

Moving Trilliums and other Wild Plants

It is not at all necessary to wait until August or later to move wild flowers. I move from the woods every year trilliums, marsh marigolds, cypripediums, rue anemones, and Asclepias tuberosa, in full bloom, and have no trouble whatever in getting them to live and thrive. They flag or sulk for a few hours, sometimes wilting down, but always come up smiling after one or two nights in their new location. Just the morning before the issue of May 6th came to hand, I dug about fifty trilliums and a dozen or more of rue anemone, but was unable to plant until twenty-four hours later. The plants were carried in a market basket, through about a mile of brush and briers, and finally set down in the potting shed with a bit of burlap over them, and were considerably wilted when set out, but now after three days have all revived but two, and I have no doubt every one will live. Of course it would have been better to have carried them in a closed box and planted at once, but circumstances did not permit in this case. I have several groups of trilliums planted during the last four years, all moved in bloom and all are thrifty and vigorous. They take to domestication as easily as a duck to water and are just the thing for low, shady ground. They increase slowly by offsets, one each year, and for this reason I take none as a rule except those having two stems to a corm. This gives me four the second year and six the third, and this is as far as I have got in four years, but on my last excursion I found four very large vigorous plants with triplet stems. This seems to me what should be a normal condition of a plant which has every part in threes, but I have never found but two similar specimens before.

The marsh marigold makes a bright show just as the early daffodils fade and I have utilized a low place just at the edge of the road near my carriage entrance to display seven plants, moved in full bloom. I find that this plant has early and late varieties covering a period of about a month. There is no prettier lawn ornament than a plant of this set in the sod. Take up a large stool with plenty of earth, just as the buds show, and about a week later it will come out with its bright yellow flowers and last about two weeks. Then it can be thrown out and the original circle of turf replaced (provided, of course, that it was placed in a shady place and kept watered), or the spot may be used for an azalea or geranium.

Of course, judgment must be used about placing such a conspicuous ornament or it may be as much out of place as a finger ring would be on the end of the nose. The rue anemone is quite common in woods around where I live but only grows from four to six inches high, but transplant it to good soil in the border and it at once grows to ten or twelve inches and stays a long time in bloom. I have a hedge of Pyrus Japonica about seventy feet long, and between the grass and the base of the hedge on the north side I have some clumps of this plant at intervals. It thrives and makes an effective showing at the same time that the shrub is in bloom, lighting up the somber shadow of the hedge. The wild yellow lady-slipper, or cypripedium domesticates easily and I have a large group of two sorts, one a little earlier than the other. The Asclepias tuberosa is one of our most brilliant wild flowers in July and is not common enough to make it undesirable, although its favorite location is along public highways and railroad banks. I move it in blossom by digging away the earth around it so as to get under with a spade, lifting all I can hold on the spade. Plant it at once and keep it well soaked with water for several days and it rarely fails to grow.

The wild myosotis or forget-me-not is very pretty in masses the size of a saucer, if properly located, and gives a mass of color for weeks. It roots near the surface and one can scoop its moss-like mass with the hand in a wet time, wrap it in a newspaper and carry it home and plant it and have it put on a new and vigorous growth within twenty-four hours.

L. B. Pierce

Antirrhinums

Antirrhinums are grown in increased numbers every year, and they are exceedingly useful in many ways, especially if grown to such perfection as they were by James Bond, gardener for Mrs. H. Brooks this winter. Mr. Bond grew the most of them in pots, one plant in a pot, six- and eight-inch pots being used. By disbudding and heavy feeding, flower spikes over six feet long were obtained, each spike carrying from fifty to seventy-five open flowers. Spikes of this size can be used for large vases having the merit of keeping for a considerable length of time besides being easily packed for shipment.

A good method to adopt when antirrhinums are wanted in the winter is to keep as many as may be required from out of the stock grown for summer planting, potting them into four-inch pots, keeping them pinched back and nearly starving them all summer. Then in the fall, either put them into larger pots or plant them in the bench, when they will make stronger growth than if grown right along from seed inside.

David McIntosh.

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

One of the most touching tributes to the heroic dead is the custom followed in many of the New England coast communities of strewing the water with flowers in memory of those who gave up their lives on the sea in their country's service. The school children always take a prominent part in these impressive ceremonies.

At no time of the year is the use of artificial or dried flowers so incongruous as in spring when all nature is exuberant with life, and nothing looks more out of harmony with the sentiment and purpose of Decoration Day than the display of these tinsel things amid the bursting leaves, buds, and blossoms of this vernal celebration. To minimize the use of counterfeit material should be the aim of every one who wishes to see the floral character of this holiday perpetuated and intensified, and there is nothing that can be done that will avail more in this direction than the avoidance of anything savoring of avarice in the selling of flowers — bearing in mind the Easter lesson and that Decoration Day appeals with peculiar force to all classes and conditions of people.

Memorial Day, instituted for the purpose of strewing flowers on the graves of the patriotic soldier and sailor dead, has extended far beyond the scope originally contemplated; and the beautiful custom of devoting the day to floral decoration of the graves of all dear ones who have gone, old and young alike, prevails universally over the entire country. It is a custom well adapted to give expression to sentiments that exist in every human heart and the vicissitudes of human existence can be depended upon to keep it alive for all time. The florist is the great beneficiary of this most floral of all floral holidays, and it now remains for him to so deal with it that no excuse is given for a diversion of its benefits to any other form of memorial. Its universality is its best claim upon his consideration. It would be a most deplorable misfortune for the flower industry if the Memorial Day tribute should ever come to be a luxury.

The demands of out-door planting and other spring operations tends to divert the attention of the flower grower from the greenhouse crops which have monopolized his efforts throughout the winter season and the result is frequently a neglect at this time which is apt to prove very expensive. The business of Memorial Day has grown rapidly in recent years and is still growing. So important has it become that with some florists it is second to none, not excepting either Christmas or Easter. The prospective crop for Memorial or "Decoration" Day thus takes on a value that cannot be overestimated and he who relaxes his vigilant attention to his roses, carnations, or other greenhouse material makes a mistake which he will feel when the bills come in for goods that he will have to buy in market in consequence. The small proportion of red flowers as compared with white, at this date, gives a special value to any colored material, and those having such will experience no difficulty in marketing every bit of it at remunerative prices.

HORTICULTURE has done what it could to awaken the horticultural interests to the terrible scourge of moths from which eastern New England is suffering, and the impending danger to the gardens and forests of the entire country as well as the health and comfort of the people, if these horrible nuisances are not restrained. There is no subject of greater importance before the American public to-day. We repeat the warning which we have sounded before, and insist that the only hope for the country lies in the prompt action of the national government. Communities basing hope of immunity on their distance from the infested districts are doubtless booked for a rude awakening; caterpillars or egg masses may be carried on the roofs of freight cars across the continent in a few days, and it will not take them long to make their presence known and felt. If Congress is not compelled to act by an overwhelming demand, inestimable mischief is in prospect.

One of the most regrettable tendencies in garden-making in America at the present time is the "Italian garden" fad. Fashion and a desire to have something of foreign aspect and which is beyond the acquirement of any except the wealthy, seems to be the main incentive back of it all and this is encouraged and abetted by architects ambitious to cater to the caprices of the rich. Whatever there may be that is admirable in topiary work under Italian or other foreign skies, associated with certain architecture and harmonious environment, and with a class of material not practicable in this country, we certainly find no pleasure, but rather pain, in the contemplation of these incongruous clipped and distorted trees in the American landscape. Strange it is that, with their boasted culture and refinement, our people cannot be satisfied with the vast resources of harmonious and beautiful material at their disposal and nature's way of using it to best advantage. The "tree sculptor" is an abomination.

Gypsy Moth Bill Signed

Governor Douglas has signed the gypsy moth bill. The next step is the appointment by the governor of a superintendent to take charge of the work of suppression. The bill provides a State appropriation of $300,000 to be spread over three years, $75,000 for this year, $150,000 for 1906 and $75,000 for 1907.

NEWPORT

MARECHAL NIEL GROWN IN POTS

While going through the greenhouses of Hon. Perry Belmont the other day, my attention was drawn to a plant of Marechal Niel rose in a seven-inch pot. This plant, the only one remaining out of a large number Mr. Marshall had in for Easter, had then thirty-five flowers on it. These plants were trained fan shape by placing two wires bent into that shape into the pots, then tying the wood close in to these wires, and this was so well done on the plant seen the other day that no wire could be observed unless on very close scrutiny. Marechal Neil roses covered with beautiful and fragrant flowers in seven-and eight-inch pots for Easter had only to be seen to be quickly picked up by a retailer, who in turn, just as quickly disposed of them.

Mr. Marshall has three seedling carnations, planted in among standard varieties, the better to observe the relative merits of each. In color these are one red and two white. One white is not only fully as large as any standard white but it is also a free bloomer with a stem nearly four feet long. Mr. Marshall believes in grafted Liberty roses; he has them on their own roots and grafted, growing side by side, with the advantage plainly seen on the side of the grafted plants.

SOME GRAND CROTONS

The crotons grown by Colin Roberston, gardener for Mrs. Robert Goelet, recall to the minds of some gardeners the specimens grown in years gone by and periodically exhibited in Boston by David Montieth. These plants on three successive occasions won first premiums at the exhibition of the Newport Horticultural Society and they stand now in better shape than ever, without the loss of a leaf.

Mr. Robertson grows only about eight varieties and but a few plants of each variety and these are grown mostly from tops mossed early in winter. The tops are left on the old plants as long as possible before severing them, thereby enabling the young tops to stand the shock of separation from the parent stem without any ill effects. The house where these crotons are grown is slightly shaded in summer by trees growing outside, otherwise they are at all times fully exposed to the sunlight, which perhaps accounts for the brilliant color of the foliage from top to bottom. The varieties mostly grown here are Andreaneum, Victoria, Baroness Rothschild, Interuptum, Evansianum, Constadtii, Faciatum and Sunset, and these are grown in a way that shows each variety to the best possible advantage.

DAVID MCINTOSH.

WHAT THEY SAY OF US

HORTICULTURE is an exceptionally bright, up-to-date paper. — C. L. S.

I like your publication and congratulate you upon the success you have so far attained. — E. W.

QUESTION OF GRAPE CULTURE

The trouble with your correspondent, J. M. Roman's, grapes appears to me as if it was in the starting, as I should imagine that the vines were started without giving the border a thorough soaking, as Mr. Roman says he had violets planted on the border with sufficient heat to keep the same at about 45 degrees. The pipes would naturally help to dry the border, and the violets would also prevent him from giving the border a thorough soaking, at the time of year — the middle of January — when he says the vines were started. If your correspondent wants to start his vines in January in the future, he had better discontinue growing violets, or anything else on the border; otherwise it would be best to get through with the violets as early in spring as possible, clear the border and keep it clear, as it is very essential for a vine border to have all the sun and air it is possible to get, and soak the same thoroughly before starting. But my advice would be to discard the growing of violets altogether on the vine border.

ARTHUR GRIFFIN.

TO THE EDITOR OF HORTICULTURE

Dear Sir: — In a recent issue of HORTICULTURE I note the inquiry by a grower in trouble about grape culture in greenhouses. This used to be my hobby when I was young and a gentleman's gardener, and my ears itched to have a talk with that man for five minutes in his grapery. Tell him to clean his violets off his border, take his heat away from the roots below, let them have all the sun on the border they can get. Don't dig the border over two inches deep, carefully with a fork; encourage surface roots; raise the border above the level ground; don't dope them with too much bone dust or manure; have the border so that no water will lie in it but drain off. The roots are not in proper action but are decaying on account of shade on the border, and every year they will grow worse until they die. You must aim at new roots every year until the border is full; then all will go right.

I will answer any question your correspondent wishes to write to me. I have grown bunches of Black Hamburgs two feet and a half around, and one vine of White Nice three years old that bore two bunches sixteen pounds each. It takes practice, patience, and perseverance to do it, but if he loves to force fruit as I used he can do it.

Yours respectfully,

ROBERT LINNEY.

AKRON, O.

INSECTS AND INSECTICIDES

"Subscriber" requests us to ask our readers whether any one can make for him a list as complete as possible of all insects and fungi which attack plant life, also a list of all fungicides and insecticides that can be used to combat them, giving directions for their use in small and large quantities. We shall be glad to publish anything that may be sent to us in response to this inquiry, but meanwhile would recommend "Subscriber" to write to the Bowker Insecticide Company, Boston, who have made a study of this subject for many years and probably know as much regarding it as any one does.

OBITUARY

Michael Curley, for many years engaged as a florist in Hyde Park, Mass., died on Thursday, May 11, at the local emergency hospital, as the result of a fall down stairs at his home on Wednesday, whereby his skull was fractured. He was a veteran of the Civil War, enlisting in 1861 and serving to the close of the war.

Personal

Edgar King has been appointed assistant superintendent of the Springfield (Mass.) cemetery.

Mr. Harry Bayersdorfer, of Philadelphia, sailed on the Grosser Kurfürst on May 18th, for Bremen, Germany.

Nelson F. Higgins, who has been in charge of the cemetery greenhouses at Springfield, Mass., has resigned to take up the florist business.

Visitors in Boston: George C. Watson, representing Clucas & Boddington Co.; W. C. Eldering, Overveen, Holland, Mr. Eldering is just starting on his annual American trip; S. S. Skidelsky of Philadelphia.

Carl E. Kern who has been employed with superintendent G. X. Amrhyn in the New Haven Park department has resigned to take the position of landscape-gardener on the estate of Payne Whitney at Manhasset, L. I., which is to be greatly improved and laid out new.

W. N. Craig of North Easton, Mass., secretary of the Gardeners' and Florists' Club of Boston, met with severe injuries on May 10, by being thrown from an express wagon. His right side was badly hurt, one rib broken, two or three others fractured somewhat, head cut, one finger crushed, and one laid open. Best wishes for his speedy recovery are extended.

BUSINESS CHANGES

Henry Merkel has opened a retail store on Euclid avenue, Cleveland, O.

Otto J. Sawyer has rented the greenhouses of George W. Fetzer at Allentown, Pa.

W. L. Morris of Des Moines, Ia., has filed a voluntary petition in bankruptcy.

The florists' store of Elmore & Evans at Whitesboro, N. Y., has been discontinued.

Hermans & Reger have opened a retail store at 457 Fifth Avenue, Brooklyn, N. Y.

The Fairmont Nursery Co., Fairmont, Minn., has been incorporated. Capital, $25,000.

Vredenburg & Co., Rochester, N. Y., lithographers, have been incorporated. Capital, $200,000.

The business of W. G. Richardson at Bennington, Vt., has been disposed of to Thomas H. Phelan.

The business of the late Jeremiah Harrigan at East Foxboro, Mass., will be carried on by his son, D. S. Harrigan.

Louis A. Riemer has succeeded to the firm of Riemer & Radmer as agent for the Furman boilers at Milwaukee, Wis.

Mr. C. Hansen has leased his greenhouses in St. Paul from June first to Frank Gustafson, recently in the employ of L. L. May & Co.

The Frank Netschert Co. have been incorporated in New York to manufacture artificial plants and flowers. Capital, $25,000.

Salter Bros.' new store on Main street, Rochester, N. Y., has about seventy feet frontage. Mirrors are largely used on the walls and the arrangement of plants and flowers for effect shows the work of a master hand. If the style followed here were widely copied by store florists it would have a marked effect on the flower trade. Albion Salter has charge.

Notes on the Cultivation of Pæonies

A paper read before the Gardeners' and Florists' Club of Boston by Robert Tracy Jackson

[See Frontispiece]

Herbaceous pæonies are mostly of the easiest cultivation. Full sunshine, or at least a good exposure to the sun is necessary as they do not thrive in the shade as under trees. The roots of trees or large shrubs are objectionable, especially elms, maples and lilacs, as absorbing the nourishment and water needed for the full development of the pæonies. A location protected from the force of the wind is desirable where possible. Pæonies will stand great variation as regards soil, but a heavy rather than a light sandy soil suits them best. Being strong feeders and vigorous growers they should be given deep cultivation, eighteen inches to two feet, even more is recommended by some, but I have had good results with two feet. An abundance of barnyard manure should be worked well into the soil especially before planting. If this manuring can be done some months previously, so much the better. Cow manure is best when available. W. A. Peterson says that where propagation is the feature desired peonies form more and better roots in light rather than heavy soil.

Where the soil is sandy an addition of clay would doubtless be an advantage. In a heavy clay, which is the condition in my garden, a free use of sifted coal ashes and leaf mold, dug into the soil works wonders in ameliorating and improving its tilth. Coal ashes contain little potash and add practically nothing of chemical fertilizing ingredients to the soil and nearly the same may be said of leaf mold, but both improve its mechanical condition which is of the very first importance, for successful plant growth. Sand and road scrapings where available are of course excellent for lightening heavy soil; stress is laid on coal ashes simply because their value is not usually appreciated and in small gardens it is a convenient available material, usually a waste product to be gotten rid of. My attention was called to the value of coal ashes by Dr. Henry P. Walcott, who has used it for many years in his garden. It is much used by English and Scotch gardeners for clay soil. In the autumn cleaning of the streets in Cambridge the city carts collect great quantities of leaves which they are very glad to dump on the grounds of willing citizens. These in a single year, by turning once, make a fine, well decomposed leaf mold ready to dig into the garden, and give room for a new lot of leaves.

It is emphatically best to plant pæonies in the fall. In the spring they may be transplanted if necessary; but it is undesirable to purchase stock at that time. Frequently plants purchased in spring will not appear above ground the first year, as may happen with excellent stock coming from a distance, also in spring there is more chance of the death of some plants than with fall planting. If plants are received in autumn too late for fall planting, at is sometimes the case in importing, or if they are in questionable condition, if small enough, it is best to pot them and plunge the pots in a cold frame for the winter. In spring they can then be planted out without disturbing what roots they have made.

Pæonies may be left in the ground without transplanting some eight or ten years, but longer is undesirable if best results are to be attained. It is sometimes stated that peonies may be left in the ground almost indefinitely but this is a mistake if good results are expected. The finest flowers are to be had on moderate sized, well-grown plants. If plants are left too long in the ground they sometimes die out in the center.

For purposes of propagation plants may be advantageously taken up more frequently, every two or three years, divided with a large sharp knife (a small carving knife is very good), so as to leave at least one bud with a portion of the root. Pæony roots are stiff and unyielding as well as brittle, so that they are very apt to be broken seriously in dividing. C. S. Harrison says, "Let them lie in the shade a few hours and wilt. This toughens them and does not hurt them a particle. You can immediately restore them to their plumpness by putting them in wet moss, or keeping in or planting in moist earth. This is very important." I have tried Harrison's method this fall, only I left them out of ground for several days in cool weather. When the roots become somewhat flaccid and yielding instead of rigid and brittle, they can then be easily divided without injury, even to solid old clumps. They will regain their original plumpness in a few hours' exposure in a damp medium. Harrison has made an important contribution to the details of pæony propagation by this communication.

PÆONY, ICHARDSON SEEDLING: SAMUEL HENSHAW

The small plants after division may be set out in nursery rows, two feet apart, the plants being about twelve to eighteen inches apart in the row, according to size. In cutting up, some roots will be broken off and these may be planted with the rest as more or less will grow from adventitious buds starting under these conditions. Actual observations of what proportion will grow from adventitious buds would be desirable, but do not exist as far as I am aware. Mr. Harrison says ". . . if a root is broken at the center, the lower portion can never form a head . . . The upper portion of the same root where it breaks from the plant will have a good show for forming a head." He also says "I have often planted buds alone, with no root whatever. One fall I put in thirty, and the next year had twenty-seven fine plants." In propagating if the plants are choice, and are cut very fine it is desirable to set a frame over them the first winter. As Peterson says herbaceous pæonies of choice varieties may be propagated by grafting. This method is practised to some extent; but I think is most undesirable for herbaceous plants. Grafting is not expected in such plants and if practised endless confusion in varieties may occur from the growth of adventitious buds from the stock. If this is done they should be grafted on officinalis, tenuifolium, or some other distinct species, so that shoots from the stock, which are likely to develop, will be strikingly distinct from those developed by the scion.

(Continued in next week's issue)

NEWS OF THE CLUBS AND SOCIETIES

NEW LONDON COUNTY HORTICULTURAL SOCIETY

The meeting of this society at Norwich, Conn., on May 10, was a very successful one. W. H. Wyman of North Abington, Mass., talked on the subject of the Twentieth Century Horticulturist. In the course of his remarks he strongly advised the study of forestry and recommended the giving of more attention to our native flora in the work of landscape adornment and general gardening. His address was much enjoyed and at the close he was given a vote of thanks.

HARTFORD FLORIST CLUB

The regular meeting of this club was held on Friday night, May 12, with a large attendance. President Huss gave an interesting talk on Alpine Auriculas and other perennials, of which he is a most successful grower. It was intimated at the meeting that the executive committee of the American Rose Society would meet in Hartford, June 19.

A lively discussion took place on the subject of window boxes. The president appointed a committee to devise ways and means for bringing this important matter before the public. Resolutions were also adopted on the death of Mr. Alfred Whiting.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The Trunk Line Association has made the usual reduced rate to the Washington convention of one and one-third fare for the round trip. The Trunk Line Association territory includes the States of New York, Pennsylvania, New Jersey, Maryland, West Virginia, and a portion of Virginia. Following the granting of this concession by the Trunk Line Association, application has been made to the New England, Central, Southeastern, Southwestern, and Western Passenger Associations for a similar reduction. As soon as action has been taken by these associations, due announcement will be made accordingly.

WM. J. STEWART, *Secretary.*

GARDENERS' AND FLORISTS' CLUB OF BOSTON

The monthly meeting of this prosperous club was held at Horticultural Hall on Tuesday evening, May 16, sixty members being present. Eight new members were added during the evening. On the exhibition tables were some attractive exhibits, among them being Louis Dupuy's novelty Crassula hybrida, a vase of William Sim's famous candytuft, with blooms of sensational size, and a variety of hardy garden flowers from J. Heurlin. In response to a query Mr. Sim said that it was his custom to sow his candytuft seed about last week of November in a cold house, temperature 36 to 40 degrees. The young plants are ready to set out by last week in March.

Kenneth Finlayson reported for his committee on the evil of re-naming plants, that they would recommend reference of this matter to the S. A. F. and the report was accepted. Secretary Craig was unable to be present owing to his late accident.

The interesting event of the evening was the reading of a paper on pæony culture by Robert Tracy Jackson. The paper was substantially the same as this gentleman presented last season before the Massachusetts Horticultural Society. We take pleasure in presenting it. For the use of the illustrations we are indebted to Secretary Rich of the Massachusetts Horticultural Society.

MORRIS COUNTY GARDENERS' AND FLORISTS' SOCIETY

The Morris County (N. J.) Gardeners' and Florists' Society held its regular meeting on the 10th inst. On call of President Heeremans, several members came up with exhibits in both plants and flowers. President Heeremans staged a dozen magnificent specimens of calceolaria grown in 6- and 8-inch pots. The committee on exhibits gave a certificate of merit. By request of members present, Mr. Heeremans promised to read a paper on their culture at our next meeting. A vase of carnations in variety from R. Vince was remarkably good for this time of the year and received cultural commendation. Well-done specimens of begonia and variegated hydrangea shown by Mr. Mülmichall, gardener to C. A. Work, received cultural commendation. A vase of mixed chrysanthemum blooms was put up by C. H. Totty. Baby Ramblers in bloom from John Frazer, gardener for Gustav E. Kissell, were shown in fine form. The possibilities of this rose as a pot-plant were manifested. Clucas & Boddington Co. sent by special messenger sixteen varieties of hardy herbaceous perennials in bloom. They were interesting and instructive, just things that the florists on private estates need at this season of the year.

Robert M. Schultz and Andrew McKendry were elected members, and Harry Green, David Pierson, and William McCoy were proposed for membership.

Our 10th annual flower show will be held in the Assembly Rooms, Madison, Oct. 26th and 27th, next. Prospects look bright. Schedule is in press and can be secured later on, from E. Reagan, secretary, Morristown, N. J.

NOTES

On May 11 the Torrey Botanical Club gave an exhibition of violets at the New York Botanical Gardens. The exhibits came from various parts of the country and many species and varieties were represented. Dr. N. L. Britton and Dr. H. H. Rusby discussed their classification.

The preliminary schedule of the fifth annual exhibition of the New Haven County Horticultural Society is out. The show will be held in Music Hall, New Haven, Conn., on Tuesday, Wednesday, and Thursday, November 7, 8, and 9, 1905. For copies and further information apply to Thomas Pettit, secretary, 90 Prospect street, New Haven.

Arrangements are being made for a demonstration of spraying methods at Middlesex Fells at some time next week, under the auspices of the Society for the Promotion of Agriculture and the direction of the Boston Park Commission. A space of ten acres at the junction of Wyoming avenue and Ravine road, which is badly infested with the gypsy moth has been selected and the demonstration is expected to show not only what it costs to spray with improved machinery, but also something decisive as to the efficacy of the process, as the moths are now hatching out. The apparatus which Mr. Pettigrew has perfected will throw a spray to a height of sixty or seventy feet.

CUT-FLOWER MARKET REPORTS

BOSTON The market is burdened daily with heavy receipts of good material for which the demand is very light. The stock coming in is of remarkably fine quality, but it does not realize as it deserves. American Beauty and Carnot roses from cold houses take the lead. Carnations are still excellent as to grade with rates low, quality considered. Lilies are very sluggish, no demand for them whatever. It is expected that next week will see a change in conditions. Lily of the valley is faring as well as in past years at corresponding date.

BUFFALO The first half of week beginning May 8, was one of the dullest since Easter. Stock accumulated fast and by end of week everything was sold at very low prices.

Roses are still plentiful, but show the effects of warm weather. Select stock sold freely, Beauties holding firm. Lily of the valley is more plentiful and is moving well. A good supply of lilies, sweet peas, mignonette, etc., is being received daily.

CHICAGO The noteworthy feature in this weeks' cut flower trade was that the market supply has again settled to normal conditions. Express companies are now accepting cut flowers from all points and their regular city deliveries are being operated without a hitch. This along with our excellent system of deliveries for all outgoing shipments, settles the express question. Shipping demand held prices fairly well on good stock and with several houses was more urgent than on the previous two weeks. While HORTICULTURE's Chicago representative was actually responsible for the prosperity wave, yet those who use HORTICULTURE's advertising columns believe that to be also a factor in the increased demand. American Beauties are advancing in price occasioned by the crops coming to an end. The shortage is particularly on the extra and select grades. Brides and Bridesmaids continue in enormous quantities which bid fair to hold out until Decoration Day, after which date replanting will be on in full force, Wietor Bros. and Peter Reinberg have already commenced cutting from new stock. Quality of old stock is excellent for so late in the season. The supply of carnations is fairly cleaned up each day. While no advance in price has taken place, there were fancies which sold up to top quoted price which would not have brought it last week. There is a strong demand for red roses and sales at advances of $2 to $4 are common. Lilies and callas are the weak spot of the trade. Sweet peas sell rapidly. Cattleyas Mossiæ and Skinnerii are quickly taken by the smart buyers. Plenty of lilac and outdoor stock is now to be had, peonies predominating. Festiva Maxima (Drop White) is the favorite white, Von Bonback the choicest shell pink, officinalis rubra for red. The bulk of the crop is already in cold storage. Outdoor tulips are very popular and for fancy sorts good prices are realized. Smilax crops are shortening up. The new decorative green — huckleberry branches, has made a hit with our best retailers.

CINCINNATI Little can be said in regard to business for the past week. Stock in all lines has been plentiful with no fixed price.

Lilies continue to come in heavily and are moving very slow.

LOUISVILLE Business conditions the previous week were very favorable, with the exception of the planting end, owing to the continuous rain. Carnations have become very plentiful, the quality being good, with a steady demand. Roses of good quality are in demand and the supply is adequate. Nearly all the pæonies that have been received so far sold well, the quality being very good. Lilies have also sold well and are now a little short.

NEW YORK With a large supply of indoor and outdoor material, the steamer and funeral work, which comprises most of the business done in May, makes little impression on the supply. There has been a marked deterioration in the quality of Beauty, Bridesmaid, and Bride roses in the last week. Carnations are also, many of them, diminishing in size. Quoted prices do not correctly reflect the depressed condition of the market as large surplus lots are either left over or disposed of at sacrifice prices.

PHILADELPHIA Business last week was rather better, taken as a whole, than the week previous. Stock was as plentiful if not more so. The last of the week wound up in quite good shape. Beauties are still at a low ebb as to price and quite plentiful. Stock good. Liberties also about the same. Brides and Bridesmaids, quality possibly not quite as good, but excellent for this time of the year. Lily of the valley moving well, quality excellent. Very few orchids about, mainly cattleyas and dendrobiums, very few white. Sweet peas are plentiful, quality good and moving in a half-hearted way. Greens are none too plentiful and still going in a satisfactory shape. Business from now on until the early part of the month of June should be very fair. Prices of course will rule low and the outlook for the quality of stock is rather better on account of commencement work and other festivities.

ST. LOUIS Cut flower demand is very light with great quantities of stock coming in to the market. Roses are declining in quality and other staples are following suit.

NEWS NOTES

A special appropriation has been made by the Board of Aldermen of New York City for the purchase of the collection of greenhouse plants belonging to the estate of the late William Brown of Flatbush.

The creditors of Drake & Carlson of 431 Main street, Hartford, Conn., have been asked to agree to an extension of time in which to settle the debts of the firm. Indebtedness is given as $4,500 and assets $6,100.

Among the freight destroyed by the fire in the steamer *Kingstonian* in Boston harbor last week were one thousand dollars' worth of palms for A. Leuthy & Co. The loss was fully covered by insurance. Ed. MacMulkin also had a lot of bay trees on board which were lost.

At the annual meeting of the stockholders of the New York Cut Flower Exchange the following officers were elected: president, William Amos; vice-presidents, W. H. Siebrecht and Charles Beekman; treasurer, W. C. Duncan; secretary, John Donaldson; directors, W. H. Siebrecht, John A. Leech, Charles Beekman and David Dean.

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

J. R. Ratekin of the Western Seed Co., Shenandoah, Ia., has been declared bankrupt.

A final meeting of the creditors of D. Landreth & Sons will be held at 528 Walnut street, Philadelphia, May 23.

The American Seed Trade Association will hold its annual convention at Alexandria Bay, N. Y., June 20-22.

Such crops as melons, cucumbers, corn, beans, and, in fact, all those requiring warm weather are making slow headway, and will be late.

Seedsmen generally are reporting a good business, and no doubt the close of the season will show that the volume of trade has been fully up to average.

Potatoes have proved a drag, and are not worth much more than freight just now, but before new crop becomes abundant, old stock is likely to be worth more than at present.

Onion sets had a sinking spell during April and have not recovered. Owing to the high price of onions, onion seed has been in good demand, and seedsmen have had the satisfaction of reducing their stock to a gratifying extent. Business throughout the east is still active.

Although there have been no killing frosts during May in the eastern or middle States, the weather continues cool, and vegetation is making slow progress. Asparagus, which at this time of year should be abundant and cheap, is scarce and high in price. Owing to its slow growth it is poor in quality.

W. Atlee Burpee and Howard M. Earl sailed for Europe, on the *Patricia*, on Saturday, May 13. Mr. Burpee will visit the cauliflower-growing districts in Denmark and thence to London and to Paris. Then, in July, he will be joined at Queenstown by Mr. and Mrs. A. B. Scott and together they will spend the balance of the trip in seeing interesting points in Ireland, Scotland, and England.

Horticultural Architects and Builders
West Side Ave., JERSEY CITY, N. J.

We manufacture and erect every type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot-bed sash and frames. Special hand-made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

A June Wedding

Devoted to the FLORIST, PLANTSMAN, LANDSCAPE GARDENER and Kindred Interests

Published EVERY SATURDAY At 11 Hamilton Place, BOSTON, MASS. Subscription, $1.00

Something New for Decorating

Now that the season for Wild Smilax is over and no more stock can be supplied, I wish to call your attention to the Branches of the Huckleberry Tree as a most elegant Decorative Green.

It is largely used by the Florists of the Pacific Coast, Washington, and Oregon, in Decorations. The Branches are FLAT, very thickly furnished with exceedingly lustrous green leaves, and it seems to adapt itself to almost any position in decoration that the Wild Smilax can be used in.

As the Introducer of Southern Wild Smilax, I think you can give me credit for knowing a good thing when I see it, and I am convinced that in Huckleberry Branches, you will have a very beautiful substitute for the Wild Smilax, of great value to you through the months of May and June.

I am anxious to get the Verdict of the Floral Trade on this introduction and offer to send you a Case on Suspicion, price $2.50 per case if it suits you, nothing if it does not. Will you try a case on these terms?

Yours very truly

CALDWELL THE WOODSMAN

The Man who gave you the Wild Smilax

Dreer's Hardy Perennials

FOR SUMMER CUT FLOWERS

If you are not interested in a general line of Hardy Perennials, but have use for summer cut flowers you should consider at least the following leaders, which are the cream of the best sorts for summer cutting; you will find them profitable for this purpose as well as being an attraction to your grounds.

We have a large stock and the plants offered are all of such size that they will give the best possible returns. For a complete list of this class of plants as well as all other seasonable stock see our Current Wholesale List.

	Per doz.	100
Achillea, The Pearl, strong, 3-in. pots	$0.75	$5.00

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE – The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Decorative Art

The illustrations show two electric light globes suspended by silk cords. These globes can be had in many designs and a great variety of colors. Those in the illustrations are of cut glass. When perfectly clear and filtered water is used they are very effective. We frequently use these in our window to get high effects, often in front of mirrors where you get the reflection. They can often be used to good advantage in house decorations under chandeliers, etc.

RIO DE JANEIRO

(Continued from last week's issue)

During my two months' occupation on this place I meditated in the soft evenings on the singular transformations of the landscape from noon to dark night. The landscapes around Rio de Janeiro were pretty evenings and mornings, from 4 o'clock in the afternoon until dark and from dawn to 8 o'clock in the morning, but not during the day. Sunlight will penetrate a palm, scatter light and shade and disturb the harmony of the plant, because of its extreme symmetry; besides this the intense tropical sunrays make the air thin, vacant, as it were, and without color, using this expression in a poetical sense. Landscapes certainly should be developed in the tropics for evening and morning views and pleasures but less for midday. There is no meal-time between half past ten and half past two P.M.; the people don't go out at midday and will not during that time be seen even on their own grounds. Colors cannot be used too much, for this reason, in Brazilian gardens; even the old-fashioned carpet beddings look less artificial, if they are frequently interrupted by palms, and yucca and cacti for instance, and if viewed in the late afternoon and evenings. Still, progressive Brazilians have already an idea, that carpet bedding ought to be discarded for massive flower beds and, while renovating this place, I was told by its owner, Sor. Ferreira, a manufacturer of Rio, that no alternanthera carpet-bedding was desired by his wife, but abundant pinks, pansies violets, daisies, and other northern favorites.

When I had time I went out to the bay, sometimes in the morning, sometimes at night to enjoy the sunrising and sunset over the harbor. The most magnificent flames of light lit up the horizon, here shaded, there reflected again, in dark crimson, yellow, lilac, purple, and olive in the clouds, floating over the soft white and rose painted rooftops of the crescent-shaped city across the bay; green, palm-covered islands dispelled the slightest monotony in the harbor, which is boasted of as capable of furnishing anchor places for the fleets of all nations in absolute safe waters. Some of the bays are lost sight of between protruding mountain banks, the over-hanging perfect plant-green domes reflecting the green of the shore vegetation, caught in the mirror of the bay. Some days I would stroll along the fashionable suburb avenues south of the capital up to Paquet's and watch the bathers by Aurora's earliest light, as they ran from their near-by houses, small and big, senhor and senhora in bathing suits and immense towels around them, for a plunge into the breakers.

Gerhard Fleicken.

British Horticulture

A TOWN OF GLASS

Within about twenty-five years an important fruit-growing industry has sprung up at Worthing, a salubrious Sussex health resort, about ten miles from Brighton. On three sides of the town are to be seen miles of glass houses. The largest of the number is a three-quarter span house, 861 feet long by 20 feet wide. There are over eighty master fruit growers, whose houses placed end to end would extend more than thirty miles. The superficial area of the glass used in the roofs extends to over three and one-half million feet. The glass spread out would cover 81 acres. There are 136¼ miles of hot water piping. Worthing is noted for its grapes, and owing to the mildness of the climate the growers are able to forestall the nurserymen around London in capturing the early market. Grapes have been supplied to the royal tables from this district, and some splendid samples were conveyed on the *Ophir* when the Prince and Princess of Wales journeyed around the world. At one time immense quantities of tomatoes were grown here, but there has been a falling off of late years, owing to foreign competition and other causes. Some of the finest early strawberries which fetch fancy prices are raised here, whilst chrysanthemums, roses, pelargoniums, etc., form an important part of the trade. Of late, prices of ordinary produce have been low, and matters are not so rosy as formerly.

GREEN FIG CULTURE

At West Tarring, about a mile from Worthing, is to be seen an ancient garden, where Archbishop Thomas a'Becket is reported to have planted the fig trees which he brought from Italy. A fine old White Marseilles tree is believed to be a descendant of one of those planted by the Archbishop. There are about one hundred trees, chiefly Brown Turkey; these are allowed to grow naturally, and they form a sheltering grove. The gardens are more of the nature of a "show place," but I found on the occasion of a recent visit that the principal orchards for commercial fig growing were in the occupation of Messrs. Inkpen, at Sompting, a village three miles to the northeast of Worthing. This firm have gained the highest award for their fruit in a competition open to the growers throughout the country. Some of the trees over-reaching the pathway in the main avenue are over one hundred years old. The Brown Turkey variety is grown, and in one year, 4,000 dozen have been secured. The out-spread branches of the biggest tree in the orchard cover a circumference of about seventy feet. Some of the large trees yield twenty-five dozen fruit a day, for which there is a good demand not only about Covent Garden, but also in the neighboring seaside towns. The method of culture is very simple. The manure taken from the cucumber houses is used for the trees. Undoubtedly the great advantage is in the mild and equable climate.

BULB GROWING IN LINCOLNSHIRE

The Dutch bulb growers have strong competitors in Lincolnshire, where the soil of the fens is found so well adapted for successful culture. The week before Easter the growers were kept busy in sending away tons of bloom. They have experienced an exceptionally good season. Owing to Easter falling late, the Penzance, Scilly, and Guernsey supplies became shorter, and the Lincolnshire growers were able to harvest their acres of bloom to advantage. One of the pioneers in the business in the Spalding district is Mr. Richard Wellband, who has twenty acres of land, principally under bulbs. Mr. Wellband bought Weardale Perfection, the largest and grandest of trumpet daffodils at £10 a bulb and Madame de Graffe at £4 10*s*. a bulb, when they were little known in the district. He is a firm believer in the good qualities of the last named. Mr. Wellband also extensively cultivates Gloria Mundi, Glory of Leiden, and other kinds. Great attention is paid to the gathering and bunching. "If the bloom is carefully arranged in long bunches resembling a gladiolus spike," Mr. Wellband states, "they make as much as 1*s*. a dozen bunches more than if done up in a careless way. The leading growers are waking up to this now, and are giving higher pay to those who can arrange them the best." Some of the Dutch growers intend seeing what they can do on English soil, land having been secured near Wisbech, where Messrs. Bath & Sons, Ltd. carry on a successful bulb nursery.

JAPANESE GARDENING

The success of the Japanese in their prolonged struggle with Russia has given a vogue to everything relating to the "land of the chrysanthemum." It was not surprising, therefore, to find considerable interest aroused this week in a paper read by Mr. James Hudson, V. M. H., head gardener at Gunnersbury House, Middlesex, on the making of Japanese gardens in England. He described the method in which the Japanese garden at the residence of Mr. Leopold de Rothschild had been made under his direction during the past four years. The object had been to provide a garden after the Japanese style, which would be at its best in August, September, and October, when the family were in residence, and spring flowers had not been available. He had not considered it necessary to adhere to the style of garden so often seen illustrated as representing the Japanese system, and from photographs he had seen, he believed this did not represent all the phases of Japanese gardens. From the results achieved at Gunnersbury it was evident that very many Japanese plants might become general in England. Amongst the chief of the many points brought out by Mr. Hudson were that shelter should be provided, that a liberal supply of water should be secured, and that shade-loving plants as well as those preferring sunshine should be provided for. At the next meeting of the Society, Mr. N. Hayashi will speak on "Japanese horticulture," and Mr. R. E. Farrer on "Japanese plants and gardens," and the exhibits will be in accord with these subjects.

W. H. Adsett.

London, England.

Impatiens Holstii

I was glad to learn from your report appearing in Horticulture recently — of the exhibition at Boston — that Robert Cameron of the Botanic Garden, Cambridge, Mass., had exhibited a plant of the new variety heading this note. There are three plants now in bloom in Girard College greenhouses. The seed did not germinate very well — only four plants resulting from a packet of seed.

It is over twenty years since I first realized how good a plant the Impatiens Sultanii was for window gardening, when I passed a house quite frequently where was one of these plants in bloom all the time.

Quite a number of plants of the original Sultanii and a variety with salmon-pink flowers, have been distributed during the past few months in the class rooms and other rooms connected with Girard College — and grown as window plants, and very satisfactory they have proven.

The new Holstii comes as a valuable and welcome addition to this class of plants. On seeing the first flower of this new comer I had to raise my hat, so favorably did it impress me. It is salmon, overlaid with scarlet, giving it a very brilliant appearance. It is said to be an excellent bedding plant, which I can readily believe, provided it is given a sunny situation in soil not too rich.

Impatiens Holstii

There is no reason that I know of why it should not make a good flowering plant for Christmas, as well as for Easter, if there is nothing in the way of its blooming at that gay and festive season of the year.

Edwin Lonsdale

The Cultivation of Greenhouse Lettuce

In large cities there is such a demand for early market garden produce that the forcing business around these points has reached very large proportions. Among those vegetables put on the market extra early lettuce holds first place.

The cultivation of this tender salad is attended with many trials, for perfect plants must be produced and it takes years of experience before a grower can count on continued success. Even then there will be some loss because of the large number of fungus foes and the sensitiveness of the plant itself.

The seed is sown about the first of January, in boxes of clean soil, and pricked out into flats of rich, sandy loam when the true leaves appear. When large enough they are again transplanted into benches or beds, solid beds preferred, and kept growing steadily until ready for market. From the first a constant fight must be waged against fungus pests, the lettuce being attacked in all stages of its growth. By thoroughly sterilizing the various soils used, to 160 degrees Fahrenheit, many diseases can be averted — as the Rhizostonia and the "Drop," that dreaded scourge of lettuce growers. Sterilization should be practised in every case.

In guarding against disease prevention is the whole story and consists in supplying the best environment from start to finish. Lettuce is so delicate that any carelessness on the part of the grower will be reflected upon the crop. The greatest aid to development and propagation of disease is water, hence a crop should be brought through without a single watering. This can be done by using a solid bed, thoroughly soaking it down before the plants are set out. There will be plenty of water to carry the crop through and the roots will have no difficulty in finding it.

Very frequent and shallow cultivation must be kept up to the end. The surface of the soil will become as dry as dust, a medium not at all favorable to spore or fungus development. Keep the air moist by wetting down the walks, and give plenty of ventilation. Avoid checks of all kinds.

Beware of a too high temperature at night, 35 to 45 degrees being sufficient, but during the day it may run up to 80 or 90 degrees during a series of bright days without danger, but must never get that high immediately after a period of cloudy weather.

In this way a crop of lettuce can be raised far more successfully than by the old methods of watering every day or two.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

R. L. Adams, HORTICULTURE's bright representative at Amherst Agricultural College, has been chosen one of the six Commencement speakers, selected for their standing. We are glad to record it for we know the honor is worthily given.

As vacation time approaches, it is well to bear in mind that, in a business so exacting in its busy season as is that of the florist, nurseryman or seedsman, the employes are justly entitled to a good relaxation period. Liberality in this direction will not be forgotten by the beneficiaries when the rush time is on again.

The temptation to keep open shop Sundays and late evenings is very strong in the florists' business. That there are times when this is unavoidable is all the more reason for abstaining when possible. Unfortunately the good intentions of the majority are often thwarted by the selfish obstinacy of one or two individuals, and so we find in many places flower establishments open far into the night and all day Sunday for no other reason than that competitors are doing the same thing. As a rule we have found the florists' clerks to be willing, uncomplaining workers on holidays and at all other times when the exigencies of the business demanded over-time toil and it should not be necessary for them to ask that a reasonable closing hour be generally adopted and that, except in emergencies, Sunday opening be abandoned.

An unprecedented demand has been experienced this season by dealers in ornamental nursery stock. The clean-up is so complete that acceptable sizes of many desirable things cannot be furnished. It must be some time before the home-grown product will equal the demand and in the meantime we shall be forced to depend largely upon foreign sources of supply which, also, are being rapidly depleted of their best stock. Unfortunately, foreign-grown material has suffered in reputation because of the quantities of soft-grown stock totally unfitted to withstand our climate, which have been sent here, causing much disappointment to the planter. Growers on the other side and importers on this side can do much to restore confidence by studying existing conditions and restricting their dealings to stock of unassailable quality. That there will be a call for much more in certain lines than our American nurserymen can produce for a number of years to come cannot be doubted.

A movement is on foot in New York City, looking to concerted action among the wholesale flower dealers to better regulate the methods of credit giving. The present system — or lack of system, rather — is the outcome, in part, of conditions prevailing in the retail trade. It is notorious that many people accounted liberal flower-buyers go out of town at the close of the season leaving florists' bills unpaid. This class of people, as a rule, will resent any request for monthly settlement and florists catering to this sort of trade give encouragement to this attitude by presenting bills only at long intervals — some annually — being reluctant to do anything that may lead a large buyer to transfer his business elsewhere. The result is that retailers are soon heavily indebted to the wholesaler and those who are able to make prompt payments are rare. The wholesale dealer, being obliged to make regular settlements with his growers, has found the burden so heavy that all begin to realize it is time to call a halt, and sentiment now seems to be rapidly crystallizing in favor of the adoption of a time limit within which wholesale accounts must be paid. Fair-minded retailers have promised their coöperation in what is generally recognized as an imperative reform, and all that is now required is that a sufficient number of the commission dealers and wholesale market men get together, make a reasonable agreement and then stick to it. If it can be brought about that prevalent loose methods are abolished it will be a big boon to the florists' business in every department.

Do you like HORTICULTURE? Then order it for your employees; tell your friends about it; or send us their names and we will mail sample copies to them. The larger our subscription list, the better paper we can afford to give you. The interests of HORTICULTURE and its READERS are mutual.

If you have orders to give for any flowers, plants, or horticultural material of any kind, do not fail to give HORTICULTURE's advertisers a chance. The best houses are represented in our advertising columns.

After Adjournment

Easigold, F. W. Fletcher's new yellow chrysanthemum has made for itself a good reputation among the commercial growers about Boston, and will be grown this season in considerable quantity by a number of the most extensive planters. It is a seedling from J. E. Lager, and comes in from October 8 to 15.

Savannah, Ga., May 11. — Dennis Tapley is an afflicted young man of this city who has for years, though bowed and bent by disease, sold key rings in one of the squares, stamping upon the rings the names of those who buy.

He has suddenly sprung into public notice through his assertion that he has discovered a secret that has been concealed from naturalists and florists for all the ages — the secret of growing a coal black rose. Tapley declares he has perfected his method, and that he can raise a rose as black as the raven's wing. This, he asserts, he does without the use of chemicals. He has named his rose the Mourning rose and says he expects to sell the secret for $10,000. — *Miami Record.*

Ah! me-ah-me!

WHOLESOME CHESTNUTS

If you have anything to sell tell everybody what it is, and what you want for it, through HORTICULTURE, and if you do you will soon be sold out.

Don't plant everything the same as you did last year and the year before; people like changes in formation and planting for the same reason they like changes in other things.

Set aside a part of the garden for a promiscuous collection which you can cut from without marring the looks of things much.

If you have plenty of coal don't abandon fireheat too soon; better have a notch of air on at night and a little fireheat for fruit; especially keep dusting sulphur on the pipes to prevent mildew, but don't burn it; if you do you will be sorry next morning.

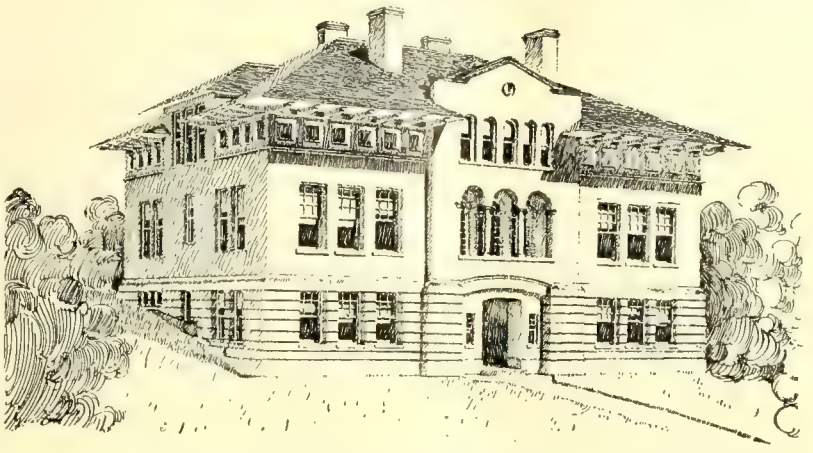
Thin grapes carefully and well at first; it makes bad working going over them the second time.

Go ahead with planting now; from this time forward most things intended for the ground are better there than anywhere else.

Have you a Baby Rambler in your possession? if not, get one or two or more; they are bright little things.

Do you know a gardener foolish enough to be without a gardening paper? if you do just show him HORTICULTURE; that will settle it.

Try thinning out-door fruit as you do fruit under glass; you will have a big job on your hands and big fruit in them later on.



Give calceolarias plenty of pot room; if not, they will get mad and flower too soon by way of letting you know it.

Get your window boxes ready and filled; keep them in a sheltered place for a few days after filling and they will stand it better by so doing.

Don't buy cheap plants; the cheapest in any commodity is often the dearest in the end and it is especially so with plants and seeds.

Our frontispiece shows a decoration of pæonies and summer roses for a June wedding in Grace Church, New York City. The peonies were used with long stems and foliage and the roses were also cut in large branches and used in loose, unconventional arrangement. A torchè of roses adorned each pew end, on the main aisle. J. H. Small & Sons were the decorators. In the use of such material for bold or dainty effects this firm has few equals.

New Horticulture Building for M. A. C.

With the signature of Gov. Douglas on May 17, the final step was taken in the appropriation of $68,000 for the Mass. Agricultural College at Amherst. Special interest is attached to this as $39,000 is for a new building to be devoted entirely to horticultural interests.

The building is to be a modern, fireproof structure throughout, about 50×70 feet, built of brick, with a tile roof, and heated from the central heating plant of the college. The basement story is to contain two class rooms, one large laboratory, and rooms for storage, coats, instruments, etc. On the main floor are two offices, a record room, a laboratory, a library, and a museum. The drafting room for the landscape-gardeners occupies the third floor, with a class room, private laboratory, photographing and dark room, and janitor's quarters. The whole arrangement is compact, convenient, and especially adapted to the object for which it is intended.

That the college has long needed such a building no one is better aware than the students themselves. Cramped quarters and lack of apparatus are not conducive to the best results. The only fault that can be found is that it wasn't granted a year ago, so that the present senior class could benefit by it. Out of a graduating class of thirty, twenty-three are taking horticulture, floriculture, or landscape-gardening.

Obituary

The many personal friends in this country and abroad of Mr. Thomas Smith, of the firm of Smith Brothers, Nurserymen and Seedsmen, of Uitenhage and Port Elizabeth, South Africa, will learn with very sincere regret of his death at Sibsey, near Boston, on Sunday evening last, in his 47th year. The sad event occurring so soon after the demise of his brother Richard, another member of the firm who passed away at Aliwal North on March 26th, in his 50th year, deep sympathy will be felt for their surviving brothers and sisters in this country and in Uitenhage. Mr. Tom Smith was a native of Skirbeck, Lincolnshire, and before going out to South Africa in the early seventies was for a time employed in the old Wellington Road Nurseries, St. John's Wood, under Mr. James O'Brien. His late brother Richard went out about 1875, and the two brothers started a nursery business in Nelson Square Gardens, Port Elizabeth, and subsequently, being attracted by the splendid water supply at Uitenhage, established themselves there, where they were joined by their youngest brother, Walter, now the only surviving partner. With great energy and industry they built up perhaps the most extensive and flourishing business of its kind in the colony, soon became large importers and exporters of British and South African plants, seeds, and bulbs, and prospered amazingly until the war for a time seriously curtailed their energies. Mr. Smith was on a business trip to the old country, but was not well when he landed in December last, and a bad attack of jaundice ensuing, the end came which all who knew him so deeply deplore. — *Nurseryman and Seedsman, London.*

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

Jack Frost is still working. Reports from the country towns show much damage. Beans and corn on many places in Wellesley have succumbed, and Smith of Tewksbury reports icicles an inch long hanging from his asters.

A meeting of the managers, captains, and treasurers of the ball teams was held in Music Hall Market, Thursday, May 25 to complete arrangements for the picnic and ball game at Montgomery's field in Natick, Saturday, June 3. It is an assured success. Bear in mind, however, that every ticket sold adds to the pleasure to be afforded. I give a list of the Music Hall Market team, subject to correction.

McAlpine, p.; Wood, c.; S. Capers, 1 b.; McFarland, c. f.; H. Capers, 2 b.; Matthews, 3 b.; H. Ward, s. s.; Holden, l. f.; Rough, r. f.

Many have noticed and admired the superb specimens of Richardia Elliottiana displayed in Thomas F. Galvin's window. These were grown by J. Tailby & Son, and are the descendants of the original sent by H. M. Stanley from Africa. Three of the original bulbs came to this country, being purchased by Messrs. Tailby, Hunnewell, and Ames for about $150. Mr. Tailby has grown them in quantity for the last six or eight years. They are given about the same treatment as the common Richardia, but differ from them in the flowering, which is only once a year. Mr. Tailby recently sold his entire stock of his new yellow hybrid calla to a firm whose name he is unable to divulge.

THOMAS F. MATTHEWS.

NEWS OF THE CLUBS AND SOCIETIES

ST. LOUIS FLORISTS' CLUB

Preliminary list of premiums to be offered at the St. Louis Flower Show, given under the auspices of the St. Louis Florists' Club, November 7, 8, 9, 10, 1905.

Executive Board: Fred C. Weber, E. W. Guy, Theo. Miller, Fred H. Meinhardt. Otto G. Koenig, Manager, 6471 Florissant ave., St. Louis, Mo.

CLASS 1. — SHAW PREMIUMS. — Group named palms, 1st prize, $75, 2d, $50, 3d, $25. Group named ferns, 1st, $35, 2d, $25, 3d, $10. Group 15 named begonias, 1st, $15, 2d, $10, 3d, $7. Group 15 named berried plants, 1st, $8, 2d, $5. Group 12 named cyclamens, 1st, $6, 2d, $3. Group named cactus, 1st, $15. Group 25 blooming plants, excluding chrysanthemums, 1st, $15, 2d, $10, 3d, $6. Group 12 named geraniums, 1st, $10, 2d, $8, 3d, $4. Specimen decorative plant 1st, $10, 2d, $8, 3d, $5. Specimen araucaria, 1st, $5, 2d, $3. Specimen areca, 1st, $5, 2d, $3. Specimen kentia, 1st, $5, 2d, $3. Specimen latania, 1st, $5, 2d, $3. Specimen pandanus, 1st, $5, 2d, $3. 25 chrysanthemums grown to single stem, 1st, $20, 2d, $15. 3 specimen chrysanthemum plants, 3 varieties, 1st, $20, 2d, $15. Best plant of decided merit for cultivation, not previously an article of North American commerce, and introduced to such commerce by exhibitor during the year in which said award is made. Shaw Gold Medal, value, $25.

The "Shaw Premiums" are offered by permission of the Trustees of the Missouri Botanical Garden, under provision of the will of the late Henry Shaw.

CLASS 2. — CHRYSANTHEMUM PLANTS. — Specimen white, 1st prize, $10, 2d, $8. Specimen yellow, 1st $10, 2d, $8. Specimen pink, 1st, $10, 2d, $8. Specimen any other color, 1st, $10, 2d, $8. Specimen standard, 1st, $10, 2d, $8. 3 standards, 3 varieties, 1st, $25, 2d, $15. 12 plants, grown to single stem, 1st, $10, 2d, $7. Group arranged for effect, not less than 50 nor more than 100 square feet, 1st, $35, 2d, $25.

CLASS 3. — CHRYSANTHEMUM BLOOMS. — 25 one variety white, 1st prize, $15, 2d, $12. 25 one variety yellow, 1st, $15, 2d, $12. 25 one variety pink, 1st, $15, 2d, $12. 25 one variety red, 1st, $15, 2d, $12. 25 one variety any other color, 1st $15, 2d, $12. 48 blooms, eight varieties, 6 in each vase, 1st $25, 2d, $20. 6 one variety white, 1st, $25, 2d, $20. 6 one variety white, 1st, $4, 2d, $3. 6 one variety yellow, 1st, $4, 2d, $3. 6 one variety pink, 1st, $4, 2d, $3. 6 one variety bronze, 1st, $4, 2d, $3. 6 one variety any other color, 1st, $4, 2d, $3. 50 blooms, twenty-five varieties, short stem, on mossed tables furnished by the club, 1st, $25, 2d, $15. 100, one variety, any color, 1st, $100, 2d, $75, 3d, $50.

CLASS 4. — ROSES. — 100 American Beauty, 1st prize, $100, 2d, $75, 3d, $50. 25 American Beauty, 1st, $12, 2d, $8. 25 Richmond, 1st, $12, 2d, $8. 50 any other red, 1st, $12, 2d, $8. 50 Bridesmaid, 1st, $12, 2d, $8. 50 Bride, 1st, $12, 2d, $8. 50 Golden Gate or its sports, 1st, $12, 2d, $8. 50 Madam Abel Chatenay, 1st, $12, 2d, $8. 50 any other variety, 1st, $12, 2d, $8. 6 varieties, not less than 25 blooms each, 1st, $35, 2d, $25.

CLASS 5. — CARNATIONS. — 50 white, 1st prize, $6, 2d, $4. 50 light pink, 1st, $6, 2d, $4. 50 dark pink, 1st, $6, 2d, $4. 50 scarlet, 1st, $6, 2d, $4. 50 crimson, 1st, $6, 2d, $4. 50 variegated, 1st, $6, 2d, $4. 50 any other color, 1st, $6, 2d, $4. 50 blooms, 25 or more varieties, seedlings admissible, 1st, $6, 2d, $4. 100 scarlet, (Special prize), $25. 100 variegated, (Special prize) 1st, $15, 2d, $10. Seedlings admissible.

CLASS 6. — FLORAL DISPLAYS. — Table decoration, 1st prize, $75, 2d, $50, 3d, $35. Handle basket of roses, 1st, $35, 2d, $25, 3d, $15. Handle basket of carnations, 1st, $20, 2d, $15, 3d, $10. Violet handle basket, 1st, $15, 2d, $8. Floral arrangement, 1st, $35, 2d, $25, 3d, $15. Bridal bouquet, 1st ,$25, 2d, $15, 3d, $10. Table bouquet, 1st, $15, 2d, $10, 3d, $5. Hamper of flowers, 1st, $10, 2d, $5. 50 American Beauties, arranged for effect, accessories admissible, 1st, $50, 2d, $35. Display of lily of the valley, 1st, $12, 2d, $8.

NEWPORT HORTICULTURAL SOCIETY

A regular meeting of the Newport Horticultural Society was held Wednesday evening May 17th., President Sullivan in the chair. The Secretary presented the society with a silver cup, the gift of Miss Alice Keteltas, to be awarded to the best and most original exemplification of a gateway decoration at the Society's June exhibition. The cup was received with many expressions of appreciation mingled with subdued avowals of intentions of attempts at its capture, each one wishing the other success of a Lipton and no more. J. K. Sullivan offered a prize of $25. for the best table decoration of dahlias, and Thomas G. Owen $10. for a vase of gardenias. Mrs. Perry Belmont, through Mr. John Marshall, offered a silver cup for the best table of decorative foliage plants, each plant to be serviceable as a table plant, to be competed for at the June exhibition.

These items show the way the wind is blowing. Newport is chuck full of people who are awakening to a realization of the fact that the organization doing the most to boom the city is the Horticultural Society. And the end is not yet.

J. K. M. L. Farquhar of Boston was present during the early part of the evening, and to the great disappointment of those present, just as the president was about to ask him to address the members, he took his departure announcing that he had to return on the train about starting, but Mr. Farquhar promised to address the Society at one of the summer meetings.

The dates for the coming exhibitions as finally fixed are as follows: June exhibition — June 27, 28, 29; September 11, 12, and 13, in the Casino.

Premium schedules and entry blanks can be had on application to the secretary.

DAVID MCINTOSH.

Ledge Road, Newport, R.I.

AMERICAN ASSOCIATION OF NURSERYMEN

The program committee begs to announce that Assistant Secretary Willet M. Hays, of the Department of Agriculture, Washington, D. C., has consented to be at our convention at West Baden Springs, June 14th-16th, and will talk on plant breeding. We feel that his presence will materially increase the interest of the meeting and I trust the attention of all the nurserymen will be called to the matter and others interested largely in fruit growing. It is expected he will speak Thursday evening, June 15th, at 7.45 P.M.

HARLAN P. KELSEY, *Chairman.*

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The New England Passenger Association has authorized a rate of one and one-third fare on certificate plan, in coöperation with rates announced by Trunk Line Association, for persons attending the S. A. F. convention at Washington, D. C., August 15–18, 1905.

WM. J. STEWART, *Secretary.*

MENLO PARK HORTICULTURAL SOCIETY

The fourth floral exhibition of the Menlo Park Horticultural Society, Menlo Park, Cal., held last week, was one of the most successful in the history of the society. The exhibitors were among the most prominent people in the State.

The grand display of roses from the estate of James L. Flood was very prominent and the subject of much favorable comment. Probably the most attractive feature of the show was the table decoration by Andrew McDonald, gardener for J. B. Coryell. It was of orchids and farleyense ferns and carried off the first prize. W. H. Crocker of Burlingame showed a collection of flowering shrubs. He is the possessor of the finest collection on the Pacific Coast. The roses from the conservatories of Timothy Hopkins, S. E. Slade, C. W. Smith and J. Henry Meyer occupied the center of the hall. The exhibit of herbaceous plants made by G. A. Pope of Burlingame, carried off first premium. Joseph B. Coryell made a display of rhododendrons which was greatly admired. Mr. Coryell has the most complete collection of rhododendrons in California.

The hall was thronged all afternoon by the leading society folk of the county.

AMERICAN ROSE SOCIETY

A meeting of the executive committee of the American Rose Society will be held at Hartford, Conn., on Monday, June 19. The rose garden in Elizabeth Park will be in full glory at that date and a visit of inspection under the guidance of Superintendent Wirth and the members of the Hartford Florist Club will form a part of the program. Important business concerning the welfare of the society will also have attention. Communications for the committee should be addressed to the secretary's office, 11 Hamilton place, Boston.

WM. J. STEWART, *Secretary.*

NOTES

The regular meeting of the Rhode Island Horticultural Society was held May 17, when W. H. Tarbox read an interesting paper on the aster.

The New Haven County Horticultural Society awarded a certificate of merit to W. J. Rowe for a seedling canna exhibited at its May meeting. Arrangements are being made for the annual outing in conjunction with the Hartford Florist Club in August.

The Melrose Amateur Gardeners' Society, which has become so important a factor in the improvement and beautifying of Melrose, is now making plans for the June exhibition, which will be given in Hawthorne Hall on June 17.

ROSE "DANMARK" (HYDBRID TEA)

By Pierre du Plony in "Journal des Roses"

This rose was raised and given into commerce by M. Zeiner-Lassen in 1890. It is a hybrid tea, an accidental cross of La France, from which it has inherited all its characteristic features except that the color is a little more red in the center. The plant, although well furnished with foliage, is also a little less vigorous than La France, but, however, flowers in very great abundance. The flowers, like those of La France, stand erect and are very fragrant.

Altogether it is certainly a good variety for cultivation in a general collection of roses.

OUTDOOR ART AND CRAFT

The Hillhouse estate in New Haven has been purchased for Yale University by graduates of the college, at a cost of $500,000. The property is secured with a special view of meeting the needs of the forest school and of the botanical garden.

It is expected that President Roosevelt will soon issue a proclamation setting aside about 10,000,000 acres of land in Idaho as a forest reserve. The proposed withdrawal of the land in question has been the subject of much animated controversy in Idaho for several months.

In a statement issued May 11, the Greylock park commissioners say they have acquired 1113 acres and that there are 287 more to be bought with the last appropriation of $14,000 from the legislature. Several hundred acres of forest were rescued just in time from voracious lumbermen.

Rhododendron (Azalea) Schlippenbachii, a new introduction, is blooming beautifully on the Palmer estate at Stamford, Conn., at the present time. The habit of the plant is similar to that of Azalea Mollis but the leaves are different from those of any other azalea, being very large, broad at the top and not unlike the foliage of the white oak. The flowers, borne in clusters, are apple-blossom pink fading to white in the center and spotted with brown at the base of the upper segments. The blooms are about 2½ inches in diameter.

Circulars have been issued by the School of Horticulture at Hartford, Conn., calling attention to the opportunity offered for study and employment for school children during the summer months.

The lessons and the various features of the course given in gardening are recounted in detail, especial attention being given to the habits of industry and close and systematic observation taught children by this out-of-doors employment. The course began about the first of May and will continue until the middle of September. The educational excursion will be held about the first of July.

A meeting was recently held to consider methods of safe-guarding the shade trees of the city of Montreal from the ravages of the tussock-moth. Dr. Fletcher of Ottawa with Professor Penhallow of McGill University, pointed out the life history and the destructive character of these insects. There was a diversity of opinion as to the threatened danger, but a general feeling that steps be at once taken to prevent serious injury to the trees which are the pride of the city. A suggestion was made that prizes be offered to children for collecting the eggs. The city council, however, thought that the trees might suffer damage in this way, and the subject was left in the hands of the park committee.

A. B. Kirkland of Reading, Mass., has been appointed by Governor Douglas, superintendent for suppressing the gypsy and brown-tail moths, and the appointment has been confirmed by the Council. Mr. Kirkland is recognized as the best-informed man in this country on the subject and his selection for this important position is looked upon as eminently wise. Mr. Kirkland has been for a number of years connected with the Bowker Fertilizing Company. His services as a lecturer on insect problems have been in constant demand and he has written a number of books on entomological subjects. He is a man of indomitable industry and charming personality. The State is to be congratulated on securing him.

NO MOTH PARASITES FOR MASSACHUSETTS?

Moth expert Koebele, who has been successful in finding parasites for many of the most destructive insects, is soon to visit Massachusetts.

But he will receive no encouragement from the State. Forester Ackerman will not enter into any alliance with him for introducing here any parasite for the gypsy or the brown-tail moth.

Should Mr. Koebele be invited to introduce his moth parasite here, the invitation will come from private interests such as Mr. Bowditch and his associates in the anti-moth campaign, or from individual organizations.

In discussing the subject recently, Forester Ackerman said bluntly:

"I have planned no arrangement with Mr. Koebele, and shall not. When Prof. Marlatt was here he advised against the serious consideration of moth parasites because their introduction and propagation take so long. Prof. Marlatt is a sufficient authority. Of course, if the moth appropriation bill passes, then the superintendent who has the work in charge may consider Mr. Koebele's offers, but I shall not. Even if the parasites were to be introduced now, five years would be required before they would be operative, and by that time there might not be any moths."

What the State officials are striving to guard against is the appearance of any parasite, which, like the boll weevil parasite in the south, might become a curse instead of a blessing. They fear (since they are confident that the legislature will appropriate money for suppressing the gypsy moth) that a moth parasite, having no moths for food, would themselves turn to the trees or to other vegetation as the moths have done.

Mr. Kobele left Fiji, April 26, and is now en route for this country. Some years ago he claimed that there is in Austria a parasite which will eat the gypsy moth. — *Boston Advertiser.*

It is reported that Mr. Ackerman, the state forester, dosen't believe in parasites to destroy gypsy and brown-tail moths, and will have nothing to do with Mr. Koebele, who has been devoting years to finding their natural antagonists, and is coming this way to introduce them. What Mr. Ackerman does intend to do remains to be seen. He is quoted as saying, "Even if the parasites were to be introduced now, five years would be required before they would be operative, and by that time there might not be any moths." That is very good; and if the whole matter were let alone, such would very likely be the result. Insect scourges sweep over the country and devastate herbage and foliage; and they are gone. The history of agriculture and horticulture is crowded with such raids, and every farmer worthy of the name (there are too few of them) knows how he must personally guard his own trees. It will be found, eventually, that Nature's balances are the truest, that Nature's cures are the surest. For an essential, we should say: Protect the birds — bring back the birds, yes, bring them back — for there are not a tenth as many of them as there were forty years ago. There ought to be more stringency in the laws against shooting or otherwise killing birds. It ought to be possible for the police to explore the pockets of the pot-hunting Italians, who are depleting the song-birds for their stomachs. Without birds, civilization drops to the level of the pot-hunter, and agriculture and horticulture are ruined. Humanity depends on birds — for so depends the disposal of all noxious insects, like these various moths and beetles. The chief factor in the disappearance of the elm-leaf beetle has been the birds — spraying has been of very small importance, except to save individual trees. — *Springfield Republican.*

GYPSY MOTH IN ENGLAND

The statement is made, source not known, that an English entomologist some time ago received for examination a few specimens of the gypsy moth, and accidentally allowed some half dozen to escape. These increased and multiplied in such an alarming fashion that the moth spread over a certain locality, in which they wrought considerable damage. It has cost that English county $500,000 in the attempt to suppress them, and it is estimated that it will take another $100,000 per annum to keep them from traveling outside the area which they at present devastate.

The above appeared in the columns of the *Country Gentleman* for March 30. As Nicholson in his "Dictionary of Gardening," makes mention of the gypsy moth in such manner as to warrant the inference that this insect is no stranger in England we have made some inquiry through responsible channels in England and have been unable to learn that there have been any serious outbreak or epidemics caused by the pest in Great Britain or to find any information to substantiate the statement referred to in the *Country Gentleman.* The gypsy moth is well-known, however, in various parts of Great Britain.

"Well," says Adam, with a twinge of regret, "this garden is a long ways in the country, an' their aint no rural free delivery of mails yet, but the place has one advantage as a residential site." "I'd just like to have you tell me what it is," said Eve petulantly. "Well," said Adam, flicking off a bug from his nose, "ef you'll keep your fingers off that apple tree we wont have no laundry bills to pay for some time to come." — *Judge.*

NOTES ON THE CULTIVATION OF PÆONIES

By Robert Tracy Jackson

[Continued from last week's issue]

F. L. Temple in 1889 suggested the method of propagating herbaceous pæonies by heaping up fine rich soil over the crowns; under such conditions he found, by an accidental experiment, that roots and buds developed on the stems, which could then be cut off leaving the crown intact. F. W. Timme recommends this method of deep burial as a means of propagation. According to him the procedure is as follows. In spring before there is any growth above ground a bottomless box or tub is placed over the plant and filled with nice porous soil to a depth of twelve or fifteen inches. The new growth will push through this layer of earth developing its foliage and flowers above it. By keeping this soil enclosed in the box fairly moist all summer it will be filled with roots about October. The stalks are carefully cut away below the new stratum of soil and cut into as many pieces as there are eyes provided with roots. These short lengths planted to a depth of about two inches below the surface will grow into fine stock in less time than will small root divisions. Mr. Timme says that this sort of layering succeeds well with nearly all herbaceous pæonies.

Mallett in England also recommends this method of propagation as he says ". . . cover the stools with eight inches of light soil made firm; growths will push through this in spring readily enough and will flower well, but in September the resting buds will be found on independent stems six inches long and with a mass of roots at their bases. These should be detached and planted forthwith, and the old soil cleared from the stools to admit warmth, when they will develop many buds hitherto latent, and which they always have in reserve. These will flower in the course of the season. . . . The flowering strength of the stools is but little impaired, but a vigorous thinning of several weakly growths may be necessary in the second season." "Strong double pæonies will often form three or four resting buds on one rooting axis. These may be removed individually with a portion of the stem and its roots attached, potted, and grown on in a little warmth till planting time to encourage further root action." If this method proves as satisfactory as has been expressed, it may well be a most important means of propagating pæonies. As Mr. Temple suggested it would probably be best to fill in the earth gradually rather than the whole depth at the start, but this is a matter for determination. Leaf mold being fine, light, and retentive of moisture, would be good material for covering.

In startiug new beds or plantations it is safest to plant pæonies where they have not been grown for at least two or three years, as bits of roots may have been overlooked in digging up the plants, and such growing make confusion with varieties. If they are to be planted back in the same soil greatest care should be taken not to leave any roots behind when digging them up, but such care is never beyond the limit of possible oversight. Of course any given variety can be replanted in the same situation without risk of mixtures.

Pæonies may be transplanted or dug up for division to best advantage late in August or in September, rather than in Octocer or November, as the roots then have a chance to become established before cold weather. The crowns may be set about three inches below the surface, deeper planting is undesirable. For permanent planting pæonies should be set three feet apart, or if there is plenty of room four feet is none too much. If set closer it will be difficult to get between the plants without injuring the blossoms. If plants are small when set out, interspaces may be utilized for gladioli or any plants that will not cast appreciable shade or otherwise interfere with the peonies. Such plants had best be annuals, or of an annual character, as perennials would interfere with a free cultivation of the soil. In digging use a fork, not a spade, as less injurious to the roots of the pæonies.

For a limited number of peonies scattered planting is desirable, as allowing for the full development of each individual plant without loss of space. When grown close together the blossoms during a heavy rain or wind are apt to be beaten down and entangled with the flowers and foliage of adjacent plants. Where considerable quantities are grown beds are doubtless best, thus having all together, a convenience in watering and other cultural treatment, also the effect of mass in a bed is very fine.

Plants should be set three feet apart each way in a bed, or better four feet between rows if there is room to spare. Never having had this luxury of space I can affirm that three feet will do very well. Beds six or nine feet wide and of any convenient length cut in grass and carrying two or three rows of pæonies respectively are very attractive and easily gotten at for handling or inspection. Such beds are good for roses, phloxes, irises, or vegetables, which may be grown in rotation with pæonies when they have to be taken up. Beds of this character are used extensively in the Botanic Garden of Harvard University in Cambridge, and also in the large garden of a skilful lady horticulturist in Newport, where very best results and effects are attained. Large square beds with grass paths are used by Dr. Charles Sedgwick Minot, of Readville, in a large part of his extensive collection of some four hundred and fifty choice pæonies. Such beds may be made of any convenient size, but beds for fifty or one hundred plants have certain advantages on account of the ease of keeping track of such numbers. An obvious advantage of such a system is the ease of maintaining lists of plants in stock. Dr. Minot's plan is practically like the plan of a concert hall, where each seat, whether occupied or not bears its own number. With a book or card catalogue of the plants a pencil number on the left hand side readily shows just where and how many plants one has of a given variety.

A pæony well grown, or the same variety grown poorly or with average culture are very different. Unless really well grown one does not know what are the possibilities of this fine flower. Disbudding distinctly improves the quality of remaining flowers, especially on the larger varieties. In some varieties however, where profusion of bloom is a feature they may be left to advantage. As stated by A. H. Fewkes in an excellent article on pæony culture, the lateral buds should be removed as soon as they are large enough to handle, so as to throw all the strength into the leading bud. As he also says, proximity to a hose is an important feature when possible in planning the position of a peony bed, for the free use of water in the growing season is a great aid in producing fine flowers. Liquid cow manure, or other liquid manure used during the growing season promotes a splendid vigorous growth and correspondingly superior flowers. Water from a cesspool is excellent. Sheep manure or other fine manure stirred into the soil about the pæonies in spring works well, being washed down to the roots by rain or watering. In the late fall it is desirable to put four or five inches of barnyard manure above the crown of each plant. This may be done after the tops are cut off and the ground freezes hard; the manure being dug in, in spring.

[Continued in next issue]

THE NURSERY POOL

The general status of the ornamental nursery business in America has not been very favorable to financial returns during the past decade. Indeed, affairs are approaching the deplorable.

At the Nurserymen's Convention to be held at West Baden in June, formal recognition is to be given of the present state and we may expect a very interesting development.

No well-informed business man will deny that as a whole the ornamental nursery business as conducted in this country is disorganized and on that account suffers severely.

Virtually every item of stock offered for sale is to be found in surplus at some point and where so is procurable at cost and often below cost. The producer supplying a more or less regular supply of a general assortment of plants is not the one who usually profits by the low price prevalent due to a glut. Brokers reap the main advantage and the clients of landscape-architects practising according to approved professional methods are common and generous sharers in the advantages, but to blame either or both is but begging the question. It is but merely the good fortune of any one to be more familiar with the market than a rival and to profit in proportion to his special advantage.

The situation is that some of our most reputable, oldest, and largest nursery firms are barely eking out a dividend comparable with savings bank returns, whereas some of the smaller and newer nurserymen continue to appear to harvest a reasonble livelihood.

The working margin of many nurseries is often meager and a small proprietor may by diligence, knowledge, and foresight, earn a respectable salary by fulfilling several executive offices and joining in manual operations betimes. When a firm grows to proportions where the numerous details are delegated to salaried deputies and a properly conducted business does not net sufficient to pay for that class of assistance and provide a reasonable return during periods of business buoyancy, that business may be regarded as in an unsatisfactory financial state!

What is the remedy is the all-important query! Community of interests and various forms of amalgamation are suggested, but as yet no feasible method has been proposed.

Obviously, to curtail the production and raise selling prices would institute a most favorable condition for florists, farmers, and even amateurs to embark in the cultivation of plants, and the net gain would be but temporary and at the risk of future returns. Only an old reputable firm intending to close their affairs could hope to profit by this means, on the basis of exchanging their business for the sum brought by conducting affairs according to this method.

Nursery interests are so widely distributed, and each operating as a more or less distinct organism and to a degree somewhat experimentally, it would seem that present results are the harvest of the poor business methods of the management as a whole.

Should the dissatisfaction of nurserymen be sufficiently general to enable a large majority of the nursery interests to unite in executing a remedy, it may prove that an arrangement could be successfully adopted, as where the subscribers elect appraisers to determine upon a schedule by which each nurseryman's stock is to be sold.

Catalogued prices would in a sense be standardized on a comparative basis. By the transmission of trade prices among the nurserymen themselves, gluts would be reduced by the producer selling to another nurseryman at a higher price than he could probably secure otherwise, and by a wider distribution of a glutted article its price would be more easily maintained. The appraisers could also act as arbiters or as a court of appeals in the settlement of penalties exacted in transgressing the adopted code of regulations.

Our inclination is that the nurserymen may create a power to act as a clearing-house of available stock prices among themselves, and with proper fidelity to that power the nearest approach to a standardizing of interests will be possible.

The public will always indicate certain preferences in procuring plants, and it is not to be expected that one party would profit at the expense of the other. Individual capacity will always exert itself in business affairs and no sustained gain will be made by fictitiously bolstering up bad methods because their looseness, subterfuge, or lack of provisions are the only ones upon which general agreement can be procured.

Any draft of regulations must provide for the unhampered exertion of individual initiative. Restrictions are always open to objections and very difficult to adjust with equal severity on each subscriber. It is doubtful whether other than an instrument which will promptly, fully, and accurately post the trade associations as to locality, price, grade, and quantity, is necessary to start into operation a scheme which will eventually obviate the supposed need of a "Trust."

Any feasible code must provide for the entrance of all nurserymen and progressive benefits ensuing from the individual application of the rules prescribed for all.

In our present period of business prosperity the public can chuckle at the nurseryman's embarrassment and profit by it in their purchases.

We do not anticipate any relief from an attempted "Trust" corporation. Amalgamating like interests, whereby so doing reduces expense of production or conduction, is but shrewd business instinct. Present-day notions tend to view a pooling of interests only as a means of fleecing the many at the expense of the few. There are honorable corporations and to attach to them the odium justly due to others those scruples are not above reproach, is manifestly unjust.

Farmers have repeatedly endeavored to establish a means of relief from stock exchange manipulation of cereals, whereby the stock broker causes the price to mount to exorbitant points at the direct cost to the consumer and, by stimulating foreign competition, the indirect detriment to the producer.

The production of minerals is more easily controlled by securing the entire available supply and, if necessary, inducing an additional tariff on the import products which will compete in the domestic market. These methods are of but minor and temporary advantage in the control of the production and disposition of an article which requires no exceptional skill to produce and with the necessary materials available to embark in the business on short notice.

Emil Mische.

CUT-FLOWER MARKET REPORTS

BOSTON The cut-flower business of the past few days has been a "waiting game," all thoughts being centered on the greatest floral holiday of the year for this market. Indications point to a bigger business than ever before. A shortening up of daily receipts leads to the belief that growers are withholding material in anticipation of a rise, the very cool weather favoring such a course. Outdoor bloom is tardy and there will be an abundance of many things usually past blooming at this date.

BUFFALO The condition of the market the first half of the week had not changed from the previous, but business brightened up somewhat on Thursday, and continued good for the balance of the week, cleaning up all carried-over stock. Florists doing business near the cemeteries were good buyers, and picked up everything that was good enough for cemetery bouquets and white stock moved better than at the time of the previous report. Plenty of medium roses are to be had, while fancies and specials seem to have slacked up, and move well. Carnations are not coming in quite so plentifully, and sell readily. There is a good supply of outdoor lilac, tulips, and lily of the valley, which seems to move only fair. The outlook for Decoration Day looks bright, and a good week's business is counted on.

CLEVELAND The recent cold snap with dark days and heavy rains, has forced prices up, somewhat. Roses such as Brides, Maids, Meteors, etc., are now selling in the market at from $8 to $10 per 100, Beauties from $10 to $15, carnations from $1.50 to $3, sweet peas, 20c., and lily of the valley, $1.50. Geraniums in flower are $6 per 100 and salvia from $5 to $6.50. There will be plenty of out-door stock for Decoration Day.

CHICAGO This has been a week of good business, with local trade fair and shipping trade firm and well maintained during the entire week. Prices have not materially changed. There has been a strong demand for Liberties and the best grades of American Beauties have advanced to $4 and $5 per dozen. The demand for colored carnations was better comparatively than the inquiry for white stock save for the very good kinds as White Lawson, Lady Bountiful, and Boston Market, the latter variety being so well done by J. A. Budlong that it is bought by all for long distance shipments. The lily supply is not so heavy as the previous two weeks, but sufficient. Cape jessamine is offered in enormous quantities, quality good. Pæonies have their innings now. Already thousands are being shipped daily to Philadelphia, Pittsburgh, and Cleveland. Lilac had a good season. The double white at Randall's is exceptionally fine and there is plenty of green stuff.

LOUISVILLE Business conditions the previous week were about as good as could be expected, at this time of the year. Of course, the planting business is very satisfactory. Carnations and roses can be had in immense quantities, the quality holding up pretty well, and the demand satisfactory. Sweet peas also sell well, and are abundant. Good smilax is a little scarce. Pæonies sell very satisfactorily.

NEW YORK With the exception of one or two days in the week, business is very dull. A large supply of all varieties of roses and carnations keeps the market supplied beyond any ordinary demand. There is still an abundance of outdoor lilac and lily of the valley and early pæonies have begun to appear this week.

PHILADELPHIA Roses very plentiful. Beauties are fair for this time of year, Brides good; Kaiserin very fine. Carnations have stiffened up considerable the past two weeks and are expected to bring from two to five cents for Decoration Day. Pæonies are just about right here this year, the cool weather of the past week having held them back nicely. Cattleyas and Dendrobium nobile are about the only orchids around; they sell well. Lily of the valley very good, and in normal demand. Outdoor valley lily does not cut much of a figure in this market; what little comes in goes to the street men. Sweet peas have shortened up; pink and lavender are most called for. Gardenias are still coming in and are in fair demand. Southern gardenias cut in the bud arrive in good shape and open up nicely. Some good stock of the latter has been coming in recently.

CUT-FLOWER NOVELTIES IN CHICAGO

Gibson Beauty carnations are a drawing card at J. B. Deamud's. This variety is proving a fine late spring and summer bloomer.

E. H. Hunt has Kaiserin Augusta Victoria roses of unusual grade for so early in the season.

For Spanish Iris look to Poehlmann Bros.

Princeps gladiolus at Zech and Mann's.

Pæony Festiva maxima (Drop White) can now be supplied by all Horticulture's advertisers.

DECORATION DAY PROSPECTS IN CHICAGO

A specially-timed crop of American Beauties promises to be on in full cut for Decoration Day. J. A. Budlong, Poehlmann Bros., George and Peter Reinberg, Wietor Bros., and Wieland & Risch are the fortunate growers. An abundance of Brides and Bridesmaids are also promised. Wieland & Risch and the Reinbergs have their Liberties on in full crop. Carnations, especially colored sorts, are doubtful. There will be plenty of white. Pæonies galore, home-grown stock, will be ready with a few warm days. Chicago will be deluged with cape jessamine. Lilies are in smaller supply.

MONTREAL PLANT NOTES

Business in the stores is about normal; large hydrangeas remain, remnants which serve to remind one of a successful Easter trade. Bedding-plants have been on sale some little time, but people prefer to wait a week or two before planting. The stock generally is good, perhaps a little too large to begin with, but buyers look for good value on sight.

Dominion Square is gay with scarlet and yellow tulips effectively arranged; the mountain, rightly named Royal, however, is the center of interest. Romantic as are its mystic slopes in winter it is a dream of delicate coloring just now; the masses of minute maple twigs when seen from a distance give to it a peculiar wavy appearance. In flower I noted trilliums, dog-tooth violets, minute pansies and scentless violets, with masses of polypodium, while here and there the wild cherry and elder stand out in fine relief against the delicate green.

In a cottage garden I noted several handsome specimens of Dielytra spectabilis in flower, reminding one what a really graceful herbaceous plant this old forcing plant is, when allowed to remain and form large crowns.

COLLECTED ORCHIDS

FRESH IMPORTATION OF ..... **CATTLEYA TRIANAE**

Just received in splendid condition and offer them until sold at **$55.00** per case, original case of 40 to 50 plants.

FRENCH LILACS AND DEUTZIAS

POT-GROWN

We have a surplus of **Lilac Madame Lemoine** and **Marie Legraye,** and **Deutzia Gracilis,** just coming into flower, in fine condition for shipping and immediate use.

News Notes

A grand floral parade is to take place on the Boardwalk at Atlantic City, on June 7.

Alfred Hudder, said to have been employed by a Germantown florist, committed suicide by inhaling gas from a jet in his room at Dehnhard's Hotel, Philadelphia, on May 15.

Mrs. T. H. Greene of Woonsocket, R. I., was seriously injured in a panic in a street car on May 15. The trouble was caused by a short circuiting of the controller which set the car afire.

A. Von Asche of Woodside, N. Y., is just recovering from severe injuries sustained in a collision between an electric car and a wagon in which he was driving. He had a very narrow escape with his life.

Aug. Hammerstein, driver for Charles Kumpf, a florist of Brooklyn, N. Y., had a narrow escape from being killed in a collision between an electric car and his wagon-load of plants last Thursday. He was knocked senseless and the truck was demolished.

The firm of John A. Scollay, Brooklyn, N. Y., are at present engaged on a contract for the City of New York, installing therein steam boilers having an aggregate capacity of 80,000 square feet of direct steam radiation.

The above is being done in addition to other extensive work in other parts of the buildings.

Extensive additions and alterations are to be made to the florist establishment of William J. Johnston, 221 and 223 West Madison street, Baltimore, Md. Mr. Johnston recently purchased one of the buildings which he is now using. The improvements consist of building a third-story addition to No. 221 and a new building in the rear and making alterations on the front of the structures.

BUSINESS CHANGES

The A. F. Belcher establishment at Holbrook, Mass., has been sold to Charles L. Pierce of Gardner, who will continue the business.

James Barclay, who recently purchased the Rhode Island green houses at Pawtucket, R. I., and moved to that city, has sold his green house in Herkimer, N. Y., to H. A. Maxiner of Williamsport, Pa. A. P. Barclay, who has had charge of the Herkimer green house will join his brother in Pawtucket.

Max O. Jordan and John Appel have taken over the business hitherto carried on by J. M. Keller at Fifth avenue and 65th street, Brooklyn, N. Y., and will continue it as the J. M. Keller Co., Mr. Keller retiring. Mr. Jordan is Mr. Keller's son-in-law, and Mr. Appel has been foreman in the establishment for over twelve years. The business will be run on the same lines as heretofore.

SEED TRADE TOPICS

Wholesale dealers in the west hope to show a good average year June 1, next. They report business as generally satisfactory.

W. E. Sanderson is on the New England circuit and if Thorburn's clerks don't have to work late nights to keep up with the orders it will not be the fault of Mr. Sanderson.

The cabbage-seed crop of Long Island has shown great improvement during the past four weeks, owing to the cool, favorable weather, and now promises to be a fair average.

Excessive rain has interfered with farm and garden work most seriously for the past two weeks throughout the central west, and accordingly has curtailed the demand for seeds, both farm and garden. Seed merchants in this section say it has seriously affected their business. With the return of fine weather it is to be hoped the demand for seeds will revive, although it is really too late to hope to regain the lost ground.

Up to May 1 eastern jobbing houses had reported a very good trade and fully up to average, but since May 1, business has fallen behind, and it is now believed will show a slight decrease in volume as compared with last year. Repeated and apparently authentic reports about the California onion-seed crops are to the effect that in the zone about Santa Clara and San José, mildew has done great damage to the growing crops, and bids fair to reduce them from one-half to two-thirds — this being especially true of Southport Globe varieties — red, white, and yellow, also Puzetaker. A really severe shortage in the onion-seed crop would be borne with Christian fortitude by the seed merchants of the country.

The recent order of the Treasury Department to collectors of customs to take two-ounce samples from all importations of grass and clover seeds amounting to 100 lbs. or more, and forward same to the Secretary of Agriculture at Washington, seems to be in furtherance of a fight which the Department of Agriculture is making on "adulterated" seeds. Now if the men who are conducting this fight were practical men and not inexperienced theorists, and if they would construe the word *adulterated* at its true meaning, much good might result from the present crusade, but they do not understand their business at all, and thus do many honest dealers a great injustice. It is well known that foreign seeds are often found in the very best grades of grass seeds, and always in the cheaper grades, therefore to publish a seedsman's name, and the statement that foreign seeds were found in samples of grass seeds sold or imported by him, without naming the grade of seed, or making other explanation, is a gross injustice. The same course is followed with domestic grasses and clover, and it is all done under the pretense of aiding the farmer, but there is more political anxiety than any other element in all this.

If the Secretary of Agriculture had the courage of his convictions he would start with the farmer. He is the man who grows the seed, and he is mainly responsible for the foreign seeds of which he complains. If he were awake and vigilant in preventing weeds from maturing their seeds on his farm, he could reduce the percentage of weed seeds in his grass seeds to the minimum. To attack the seed merchant and overlook the farmer in this matter, is to attack effects and ignore causes.

Any dealer in grass seed will tell you that a difference of 25 cents per bushel in the best and an inferior grade of clover will bring a large percentage of farmers to the inferior seed. If the Department of Agriculture really wants to render justice to all and conduct its crusade intelligently, let it call the principal grass seed dealers together and consult with them.

CLEARANCE SALE **GLADIOLUS BULBS**

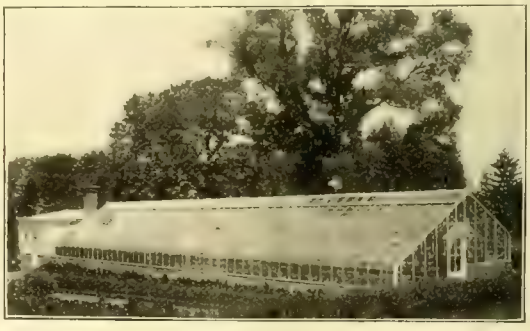
We manufacture and erect every type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS
For Steam and Water



have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot-bed sash and frames. Special hand-made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

Androsace sarmentosa

The androsaces are a group of plants in the primrose family and are true Alpine plants. They are among the prettiest little things for growing in rockeries. Some are only a couple of inches high, others have flower spikes about six inches, like the one here shown. The flowers are nearly all of different shades of pink or white; a few are yellow. The plants are an agglomeration of rosettes of different size according to the species, forming thick or loose sods, just covered in the spring with beautiful little umbels of flowers which grow from the center of the rosettes.

They are found naturally growing on the top of the highest mountains where they are covered with snow a great part of the year, and for that reason some of them, like many other Alpine plants, are not so very easy to grow; freezing and thawing frequently through the winter, does them the most harm. With the more delicate it pays to take them up in the fall and put in cold frames over winter; these are the dwarf growing ones; the others can stand something. The one here represented has stood for three years only covered with other surrounding plants, with a board roof.

To succeed with them, they must be planted in the rockery in a nearly vertical position so that the water will not stand in the rosettes, and between stones of good size, to shade them a little. Sandy peat mixed with some broken sand stones is a good mixture to grow them in. Nearly all the Alpine plants that grow rosettes have long, single roots that go deep in the soil, and it is very unwise to disturb them when once established.

Androsace sarmentosa from the Himalayas is one of the easiest to grow. It has pink flowers with dark center. A few other of the biggest growing species are A. lanuginosa from Nepaul, flower rose; A. lactea, from the Pyrenees, flower white; A. obtusifolia, from the Alps, flower light rose; A. strigilosa from the Himalayas, flower rose. Among the dwarf species which grow in thick sods the most cultivated are: A. Laggerii from Himalayas with bright pink flowers; A. villosa from the Pyrenees, flower rose; A. carnea from the Alps, flower pink; A. Wulfeniana from the Alps, all covered with rosy flowers; A. Chamæjasme from Tyrol, flower white and pink; A. Vitaliana from the Pyrenees, flower rich yellow.

ANDROSACE SARMENTOSA

Amédée Hans

Show and Fancy Pelargoniums

Within this section of the pelargonium family are to be found the most gorgeous flowered of the genus, many of them presenting strikingly beautiful combinations of coloring. A large group of the best varieties when well grown and flowered and tastefully arranged, makes one of the prettiest sights imaginable. They come in at a season of the year when the ordinary staple of winter and early spring-flowering material is on the wane, and therefore are more than useful for the person that has to figure on a continuous conservatory flowering supply. Far back in the distant past, skilful gardeners had recognized the fact that more than ordinary care was necessary to produce extraordinary well-flowered and symmetrical balanced specimens; hence to-day they find much favor with the ambitiously inclined for that same reason if for no other. Yet for the ordinary decorative specimens they are as easily handled as any greenhouse subject, even by those outside the craft, as evidenced by nice pieces seen in more or less obscure cottagers' windows at times.

Show pelargoniums require a comparatively cool temperature to grow them well, with an abundance of mellow fresh air circulating about them. In order to have them dwarf and stocky they must be kept as close to the glass as possible. One of the best places while they are in the formation stage is on a shelf opposite the ventilators, in a carnation house or any other house equivalent in temperature and exposure. On the stages of the houses wherein they may be grown, it is well to have them on inverted flower-pots and sufficiently distant from each other as to leave a clear space between them; this done it will insure an even circulation of air around them, which they like so well. On the contrary, close proximity to each other on the stages with stagnant atmospheric conditions will soon tell. Much of the foliage gets blighted and turns yellow, curtailing thereby the symmetry and finish of the plants. One of the chief characteristics of a perfect plant from the standpoint of an enthusiastic gardener is ampleness of stiff, sturdy foliage that rustles on moving the plants, like that of "Her ladyship's silks and satins as she climbs the stair."

They are partial to substantial dieting previous to flowering, and when the soil in the pots is fully occupied with roots, quantities of water at this stage are necessary to sustain them. Clay's fertilizer, as well as guano and soot, I found good stimulants. One certain indication that they are pleased with their stimulating diet is the discovery of numerous white rootlets coming to the surface of the earth in the pots, as if begging for more of it; the rootlet hairs being as prominent as the hairs on a gypsy-moth larva — or nearly so.

Stout cuttings of a partially wooded texture in

contradistinction to the soft and sappy variety, taken in late August or early September, and struck in a semi-close cold frame, well protected from the fierce sun, will, with good care, make plants of considerable size by this time next year, at which time as a rule pelargoniums of the class we are speaking about come in flower. Frequent pinching must be resorted to during their progress of growth in order to establish the frame-work of a nice balanced plant.

Plants, however, calculated to astonish the natives and that require the greater skill of the cultivator are those that are kept over from year to year, for they must be dried off to a certain degree to have them come round smiling again when you want them; to accomplish this the pots ought to be laid on their sides to prevent excessive rains getting at them during their resting period. It is done some short time after the flowering season is over and continued for three months or to the middle of September or thereabout, when they ought to be pruned back to one or two eyes of the previous year's growth, thoroughly soaked with water, but sparingly administered thereafter until they make a good break, when they should be shaken out of their pots and reduced to pots two or three sizes smaller than they had previously flowered in. Thereafter the treatment is practically similar to that given younger plants with one exception, that considerable more caution must be exercised in giving water during the early dull months of the year and until they are thoroughly recuperated.

There are so many excellent varieties in this section as first claimants for equal honors, that I feel less confident than I did in my article on ivy-leaved pelargoniums, in mentioning top-notchers; yet I will dare to say that those I will make mention of shall rank with any similar number as likely claimants for premier places.

Mrs. Ashley; this is certainly a premier claimant, for brilliancy of coloring as well as for all-round good habits; color, glowing scarlet conspicuously blotched maroon.

Mabel; a superb variety when grown to large plants and for exhibition purposes; color, dark velvety maroon, mottled white, narrow red margin.

Mrs. Robert Sandiford, fine white-flowered variety, rich and massive.

Madame Thibaut, white and rose, petals somewhat fimbriated; a splendid variety of great substance.

Triomphe de St. Mandé, deep crimson, large maroon blotches on upper petals, free bloomer; excellent variety.

Kingston Beauty, white with crimson blotch, A, 1.

Purity, beautiful white cup-shaped flower, petals slightly fringed.

Volonté Nationale, white ground, center of petals blotched and striped with carmine; charming variety.

H. M. Stanley, deep carmine, upper petals maroon blotched, lower petals lighter.

Madame Marie Renckt, pure white, with a faint lilac-rose spot on the top petals; very fine.

Decorator (Braid), light crimson veined, blotched maroon; effective.

Lady Duff, white center, rose-banded throughout the middle of petal; narrow white margin; splendid variety.

Madame Gustave Henry, pure white, a sport from Madame Thibaut, which is a guarantee of its excellence.

E. Findlayson

Nepenthes as Decorative Subjects

Pitcher-plants are not seriously regarded as of any great value by the commercial florist, but rather as curiosities for the botanic garden, useful perhaps to the student of natural history as illustrative of the way in which the struggle for existence may produce modification of structure, or as in some cases showing "reversion to type." If a few are kept, often they are relegated to a back place and lead an indifferent existence; but where they are splendidly handled as at Veitch's, England, or Edinburgh Botanic, Scotland, they suggest themselves as being of some decorative and ornamental value.

There is perhaps here scope for the exercise of ingenuity and originality in a business where variety is the very salt of life. If well done now and again, one might be introduced in the store windows by way of an interesting change. As exhibition plants I have used them with great effect in a mixed group of stove subjects; when well set up on green-painted poles they give character and distinction to the whole and never fail to attract the people. This is an excellent chance to open out business, especially if the attendant in charge has an apt way of explaining their life history and purposes. Then again by way of novelty, where a bower of southern smilax or a wire frame has been put up for a social reception or banquet, a few small compact well-pitchered plants would have a striking effect hung here and there from the frame. These are merely suggestions; many ways may open out, if one bears them in mind, of using effectively these most curious of nature's handiwork. Out of an increasing number of varieties the following would form a choice, distinct, well-marked half dozen. Mixta, Tineyii (new), Burkii excellens, Mastersiana purpurea, Curtissii superba, Dicksoniana. Perhaps the best of the small profuse-pitchered varieties is Sedenii; being small in leaf and pitcher it would make a pretty picture plant.

As to culture, they require the coolest place in a moist stove house. The end of a large house, where there are no exposed pipes crossing, suits them well. They abhor any place where they dry too quickly. They do best hung up in teak baskets in a light position, but require lath shading from strong sunshine. Rough bracken roots should be laid at the bottom of the basket, with fibrous peat and sphagnum moss as rooting material. During growing season they will take limitless quantities of water. Every third leaf should be nipped out in the young stage to make them pitcher well; this makes them throw up from the base and these growths make the finest pitchers.

Propagate by taking well-ripened tops but not too hard in winter; insert through the hole of inverted thumb pot, packing the inside with peat rather firmly; fill a four-inch pot with small crocks one-third full, lay a little moss on this, place the thumb-pot inside, then pack tight round the small pot with peat. Plunge in strong bottom heat and keep moist. Roots appear in about three months. The small pot may be lifted out now and again; as soon as the light-colored tips of the black roots appear they should be at once transferred to baskets and kept moist and close till firmly established.

Edgar Elvin

Echoes from England

NEW PLANTS FROM THIBET

The dark mystery which for so long has enveloped Thibet has passed forever; the veil has been uplifted, the pages of a book which remained for centuries uncut have been ruthlessly laid bare, and the halo of romance which hung around the Forbidden City is dispelled. Even the rich flora of this country has been collected and described, and some of the plants are now grown in our gardens.

The firm to whom we are indebted for an opportunity of becoming acquainted with Thibetan plants is Messrs. James Veitch & Sons of Chelsea, London. Some years ago they sent out E. H. Wilson to collect plants for them in unexplored regions of Western China, and Mr. Wilson succeeded in crossing the frontier, and penetrating into Thibet. It is said that Mr. Wilson has sent home no less than five thousand plants at present unknown to cultivation. If this is true, and I believe it to be the fact, then it is indeed a wonderful record. Most remarkable of these plants from Western China and Thibet recently shown by Messrs. James Veitch is the yellow flowered poppy, Meconopsis integrifolia, of which I send you a photograph. (See Frontispiece).

From a tour in Western China Mr. Wilson wrote that the highest altitude he reached was 16,100 feet. "The feature of these higher mountains is the wealth of rhododendrons, but my pen is too feeble to paint you the picture as it really is. To see miles upon miles of mountain side one blaze of rhododendron flowers is to see something better to be imagined than described." Mr. Wilson wrote that he found Meconopsis integrifolia in millions. "The flowers are often eight inches to ten inches across and of a very bright yellow color. It is a common sight to see a thousand or more in full flower together."

According to Messrs. Veitch the best position for this plant is on the north side of a hedge, but it will also grow and flower freely in open borders. The soil in which it is planted should be open and friable with a large proportion of peat and sand. The seed germinates freely either in a cold frame or out of doors in from three to fifteen months after sowing. The best results are obtained from planting in June to flower the following summer. Any attempt at any time to protect the plants is fatal. Those of your readers who delight in the culture of hardy plants should not fail to add this to their collections. It is now beautifully in flower at Kew in the rock garden.

Meconopsis punicea, which bears a solitary drooping rich red flower on a stalk about twenty inches high, was shown last week by Messrs. Veitch Sons and obtained a 1st class certificate from the Royal Horticultural Society. Primula japonica var. pulverulenta, a variety of the Japanese primrose with rich rose-purple flowers, the inflorescence being covered with a whitish powder, was also shown at the same time. Primula tangutica is a curious species with bright blackish purple narrow petaled flowers. Primula Veitchii is a new species with some resemblance to P. cortusoides, that will doubtless make a good garden plant. As many as twenty violet-colored blooms are borne on a stem about fourteen inches high. The above mentioned plants were all introduced from Western China and Thibet by Messrs. J. Veitch, through E. H. Wilson.

A NEW WHITE CARNATION

Carnation Lady Bountiful gained an award of merit from the Royal Horticultural Society last week. Like most other American varieties the edges of the flowers are fimbriated. It was exhibited by Mr. A. F. Dutton, Bexley Heath, London, who has in a short time come to the front as a large grower of carnations for market.

HIGH PRICED ORCHIDS

At a sale of orchids held in London last week some very high prices were realized. On the first day 350 lots fetched £3,300 and on the second day 68 lots realized £6,093; 200 guineas for an odontoglossum and 150 guineas for a cattleya were the highest individual prices.

FLOWERS AT KEW

At the present time the Royal Botanic Gardens, Kew, are a veritable garden of flowers. They are here, there, and everywhere. The Darwin tulips, gorgeous in their rich coloring, and stately in their poise on long stalks make a wonderful display in front of the large palm house; beds of the cream-colored Cytisus præcox and the various yellow brooms, the early rhododendrons, the spiræas, lilacs, amelanchiers, flowering currants, and many other things give a glorious display in the arboretum. The rock garden is a charming sight with cascades of alyssum, iberis, aubretia, arabis, masses of thrift, opening pinks and saxifragas; white pæonies, phlox, geum, aquilegias and a host of other spring flowers are opening in the herbaceous borders. Bluebell carpet beds and borders and woodland undergrowth by the acre and give a charm to the landscape such as no other English flower can do. At Kew there is gardening of many styles, but it is essentially an English garden, and one of the most beautiful seasons in an English garden is bluebell time.

"Honor for a gardener's son." Under this title you published a note of mine recently, which has turned out to be incorrect, through a curious coincidence of names. The Mr. Thomas Speed, who is the father of Mr. Harold Speed the famous artist, is not a gardener, but an architect. Mr. Thomas Speed the gardener had a son whose reputation as an artist is merely local, and his Christian name is not Harold.

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The Rhode Island Agricultural College authorities are elated over the passage, without a dissenting voice, of a bill in the legislature appropriating the sum of $31,500 for the building of modern greenhouses and other horticultural necessities. This generous action seems to indicate a thorough belef in the work of the college, and a willingness to support it properly.

The Tree Planting Association of New York City seems to be doing good service on behalf of the trees as is indicated by the recent order given by Commissioner McAdoo to the police, in compliance with the request of the association, directing that immediate report be made at headquarters of any arrest made for violation of the ordinance against the mutilation of trees or shrubs. The plan is to have the association's own counsel prosecute those charged with wilful injury to the trees.

The Washington convention of the Society of American Florists and Ornamental Horticulturists is now only ten weeks ahead. The first convention at the nation's capitol, held thirteen years ago, drew an attendance unexceeded by that at any meeting before or since that time, and we may reasonably expect to see an equally large gathering this year, for no city appeals as Washington does to the patriotic sentiments and love of every American. It is not too early to begin active preparations to insure a good representative attendance from every section, and to plan for traveling in social parties as much as possible. The program comprises many valuable features, the exhibition will be unprecedentedly fine and generous hospitality will have free rein, judging from the enthusiastic reports being received from Washington and Baltimore.

Specialization is the tendency of the day in commercial cut-flower growing. With some it is a matter of choice; with others, compulsion. An esteemed subscriber informs us of his purpose to devote his greenhouses, hitherto used for a varied crop, to marguerite growing, there being some half a dozen available varieties. We believe the step to be a wise one for, with daisies, as with all other flowers having an appreciable market demand and value, when a place becomes known as headquarters for the specialty where it can always be found in any quantity and full assortment, the trade will not be long in seeing the advantage. The specialist has every advantage in the way of cultural excellence and, with undivided attention to details small and large, will acquire a reputation for excellence and uniformity of product that should make him a winner over the promiscuous grower, every time. "There is nothing like getting the hang of your own business," is a saying preëminently true in these days. Every movement towards compactness, and every lop of scattered divergent interests is a step in a safe direction. Again, many greenhouse establishments more or less antiquated and hence unfit to compete with those of modern equipment on certain special lines might still be made to yield a good livelihood to their struggling owner if he would but abandon the effort to compete in a class for which his facilities are inadequate and devote his attention to some simple crop or rotation of such, selecting, if possible, something that the wholesale markets are not continuously overstocked with.

The fervid discussions aroused by the proposal to remove the stone wall separating Fifth avenue from Central Park and to slice enough off its eastern border to make room for a boulevard, furnish gratifying evidence of the pride the people of New York take in their beautiful pleasure-ground. Some of the arguments made by contributors to the daily papers, pro and con, are amusing to say the least. One individual writing to the *New York Herald*, urges the removal of the stone wall on the grounds that it is "a barrier against the capture of criminals who in fleeing from a policeman — usually of considerable corpulency — vault the wall and — good-by, crook!" It seems to us that the taking away of the wall and widening of Fifth avenue to a boulevard and promenade, while it might make a good feature as a boulevard, would utterly destroy the eastern boundary plantations, grass, and woodlands by the tramping over them in every direction, through the absence of any barrier. Central Park is invaluable as a breathing place for the tenement and apartment dweller and every foot of it should be jealously guarded in its dedication to such use. The advantages urged by the advocates of the proposed changes — the more attractive view from Fifth avenue, the acquirement of needed room for driving on the east side, the enhancement of this locality as a "show place" — are trifles compared with this consideration. The people of New York will do well to jealously guard against the smallest encroachment on the present boundaries of their park, or the slightest sacrifice of greensward and shrubbery. The greatest usefulness of such a public reservation lies in its benefits to those who have neither carriages nor automobiles, nor the means to take summer vacations in the country, and New York is well supplied with this class.

After Adjournment

Spring is the natural season of revolt against the rigors of civilization. — *Country Gentleman.*

Right you are! Let's go a-fishing.

"Country Life Questions and Answers" in *Suburban Life*, under the direction of Prof. S. T. Maynard, is an excellent feature of that handsome publication.

The *Market Grower's Gazette*, London, Eng., for May 19, publishes a lengthy quotation from the paper on carnation breeding, read by C. W. Ward at Champaign, Ill.

Anybody can set a hen, if she wishes to sit, and nobody can set her if she doesn't. — *Country Gentlemen.*

There is an analogy between hens and people.

A writer in *The Garden* recommends that fruit trees be syringed wih paraffin and soft soap in early spring to keep away bullfinches and other birds. If effective, this is certainly far better than the use of the gun.

The Nut Grower, published at Poulan, Ga., is an earnest little monthly which is doing good work in developing interest in commercial nut growing. This is a particularly promising industry, especially in the Southern United States, and offers a good field for wise investment.

The *Garden Magazine* for June, contains instructive practical papers on strawberries by James Wood, unusual vegetables by E. L. Fullerton, pruning shrubs by Leonard Barron, lilacs by John Dunbar. Other articles by sundry authors have some flippant things to say about the "local florist" the "hired man" and the "seedsman." Illustrations profuse.

The Crow and Cheyenne Indians of Montana, had their part in the floral ceremonies of Memorial day, when they covered with wild flowers the graves of General Custer and his men, killed in the massacre twenty-nine years ago. Among the Cheyennes were a number who had had a bloody hand in that massacre. Thus do flowers and civilization go hand in hand.

Referring to seedling primroses and polyanthuses, the *Journal of Horticulture* says, "Do not discard the smallest seedlings, as these invariably produce the choicest flowers." This is good advice as to other things besides primroses. Instances are not uncommon where notable varieties have come from the most insignificant seedlings, as vouched for by their raisers.

A bill passed in the recent session of the legislative assembly of British Columbia, fixes the license fee for each commercial traveler, agent, or other person taking or soliciting orders for goods, wares, merchandise, or other effects of any kind whatsoever, other than liquors or cigars, to be imported into the province to fill such orders, at $50 for every six months.

Forestry and Irrigation for May, describes a new species of juniper disovered in Texas, Juniperus Pinchoti. It appears to possess a marvelous power of sprouting from charred or cut stumps, thus persistently renewing itself and occupying fire-swept localities often to the exclusion of other woody plants. Evidence has been found of the third generation of sprouts, growing vigorously after fire.

As a result of the pure-food law passed by the Vermont Legislature last fall, and the enforcement of a similar law in Massachusetts, the Boston Fruit and Produce Exchange,which handles the greater part of the Vermont maple-sugar crop shipped to New England points, has sent circulars to the sugarmakers stating that all goods will be refused that are not properly labeled "pure maple sugar," or "syrup," or "compound maple syrup," with percentage of granulated sugar or other ingredients. Traveling men say that because of the law less than half the usual quantity of cane sugar was sold in the mountain towns of Vermont this season, with a proportionate smaller shipment of maple products. — *Country Gentleman.*

This seems rather severe on Vermont, but the traveling man's veracity is something we never question.

BEGONIA TRIOMPHE DE L'EST (TRIUMPH OF THE EAST)

Herewith please find a translation of the description of the new begonia as above, which is taken from Lemoine's catalogue for the present year.

"This new-comer is a brother of the Gloire de Lorraine obtained by us about a dozen years ago. It is a seedling from B. Socotrana and was fecundated by an unknown pollen parent. Not that the crossing was produced by chance, but because of the numerous trials of crossings attempted each year with the socotrana, it was almost impossible to keep a record of the numerous varieties tried as pollen parents.

"Whatever the crosses made we nearly always obtain seeds of normal appearance, but out of quantities of hybridations performed only a very few produce seeds that grow.

"The growth of the new variety under consideration is rapid and forms naturally a bushy mass, branching close to the ground-level and attaining as much as seventy-five centimeters in diameter. The stems are short, the leaves well developed, rounded and cordiform, slightly oblique, of good substance, and pale green.

"The blossoms which branch out indefinitely with their panicles of carmine-pink, cover the plant like a carpet, giving it that almost hemispherique appearance which is one of its characteristics. The male or staminate flowers, of four petals, of a beautiful satiny pink, succeed one another from January to June. There are no female or pistilate flowers. The buds, of carmine-red, are as decorative as the open blossoms and make of this plant a very desirable object, blooming later than Gloire de Lorraine.

This new candidate will be an excellent companion to the older beautiful variety, and is cultivated in the same manner producing a fairy-like effect when suspended in a hanging basket. A certificate of merit was awarded to it April 14, 1904, by the National Society of Horticulture of France."

EDWIN LONSDALE.

The Ginger Jar

The outlook for the man who does not salt nor sugar his stock is getting brighter and brighter.

Something for Job to think over: "Who stabs my name would stab my person, too, did not the headsman's ax stand in the way." It takes courage to fight in the open.

All men know the nice feel and smell of clean linen. Philadelphia is no longer corrupt and contented. It is *scrubbed* and contented now. Lincoln Steffens will please make a note of it.

That the S. A. F. Peony Association have done good work in the past two years is evidenced by the big increase in business, both roots and cut flowers. The other organization has helped of course. More power to us all!

The florist who hasn't time to read the trade papers and keep up with the procession has generally time enough to hold down a cracker box in the grocery store. I have seen quite a number of such men during my recent travels.

Councilman William Graham is the only member of the horticultural trade having the honor to represent Philadelphia at City Hall. He usually votes with the organization; but the spring cleaning in civic affairs in that corrupt and contented burg, finds him now in the roll-of-honor column. It was reported that he had run for cover when his constituents went after him on Wednesday when the battle was at its hottest; but Mr. Graham indignantly repudiates this. He is a high official in Sparta, and they were holding their twenty-fifth anniversary that night. That was all. The men of clan Graham ancestry may have lots of faults; but lack of courage was never counted one of the traits of the descendants of Claverhouse.

G. C. WATSON.

SPARROWS EATING GREEN FLY

We had a bed of roses in our garden in the west of Ireland. One spring the young shoots were thickly covered with aphides, and I saw a sparrow alight on the bushes, and, taking each shoot in turn in its beak about two inches from the top, it drew its beak along to the point, passing the shoot through its mouth. When the sparrow flew off I examined the bushes closely, and found that each shoot the sparrow had operated on was practically cleared of green fly, and was quite uninjured by the process. I admit it is the only useful thing I have ever known a sparrow to do. — H. E. SETON, *Clarendon Road, London, W.*

The above clipping from *The Garden* leads us to add a bit of personal testimony in behalf of the much-berated English sparrow. A few years ago, when the epidemic of canker-worms was at its height, the sparrows one morning made an onslaught on an apple tree on which were myriads of the pests. By night-fall not a vestige of canker-worm was left.

OBITUARY

Henry G. Flammer, retail florist of Detroit, Mich., died on May 22, aged forty-three years. He leaves a widow and four children. Many members of the Detroit Florists' Club of which he was a member attended the funeral.

NEWS OF THE CLUBS AND SOCIETIES

ST. LOUIS DOES THE RIGHT THING, AS USUAL

On Friday evening, May 26, a most enjoyable time was spent in the nature of a surprise party. About twenty of the leading florists including the bowling club and flower show promoters had arranged a banquet for Fred C. Weber and Theo. Miller who are leaving St. Louis, Sunday, May 28, for their trip abroad from which they expect to return about the middle of August, and as per agreement will meet the St. Louis delegation in the S. A. F. convention in Washington.

The committee in charge made preparations for an elegant banquet, decorating the table elaborately, in the center of which was a huge floral ocean liner, a representation of the *Hamburg* on which Messrs. Weber and Miller will cross the Atlantic. The two gentlemen having been led to believe that a flower show committee was to be held in the Missouri Athletic Club Hall, innocently strolled up the marble steps of the elegant apartment where to their great amazement they found themselves surrounded by a score of their best friends. After rendition of the first section of the menu, Emil Schray the old reliable secretary read the following resolution: "I move that in grateful acknowledgement of their services rendered as trustees of the Florists' club and as promoters of the coming grand flower show, *Be it resolved*, That we, the florists here assembled, extend to Messrs. Weber and Miller our best wishes for a pleasant journey and continued good health on their proposed trip abroad and return." This was promptly and vigorously seconded by Charles Beyer and others, and after unanimous adoption of the same, rising toast was given.

In due time it was announced that as a second surprise Mr. Miller would officiate as toast-master of the evening, and Mr. Weber would do honors as the principal speaker, which plan was elaborately carried out, as Mr. Weber spoke extensively on flower show topics which proved to be extremely interesting, and Mr. Miller in his newly acquired capacity made a decided hit. The other speakers were C. C. Sanders, Charles Beyer, Emil Schray, Otto G. Koenig, F. H. Meinhardt, E. W. Guy, G. B. Windler and Hy. Berning. Besides those already mentioned there were present, George H. Angermueller, J. F. Ammann, V. J. Gorly, A. Jablonsky, J. L. Koenig, C. A. Kuehn, Hy. Lohrenz, R. Thomson, and Rudolph Windt.

The floral decorations were very creditably executed by Mr. Rudolph Windt who was ably assisted by Mr. V. J. Gorly and the supervision of the general arrangement was in the hands of Mr. Otto G. Koenig.

NEWPORT HORTICULTURAL SOCIETY

Mr. W. Watts Sherman has offered fifty dollars to the Newport Horticultural Society to be awarded at the June and September exhibitions. $25 for a group of palms, ferns, foliage, and flowering plants in June, and $25 for a group of palms and foliage plants in September.

AMERICA POMOLOGICAL SOCIETY

The next biennial meeting of the American Pomological Society — the 29th in the history of the organization — will be held in Kansas City, August 8 to 10, 1905. The meeting goes to Kansas City at the earnest request of the Missouri Horticultural Society, backed by the horticultural societies of the Mississippi Valley and the western States in general.

JOHN CRAIG, *Secretary.*

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The Southeastern Passenger Association, which controls the territory south of the Ohio and Potomac and east of the Mississippi rivers, has authorized a rate of one and one-third fare on certificate plan, in coöperation with rate announced by Trunk Line Association, for persons attending the S. A. F. convention at Washington, D. C., August 15-18, 1905.

WM. J. STEWART, *Secretary.*

PLANT REGISTRATION IN ENGLAND

The annual report of the National Chrysanthemum Society of England, just received, contains the financial statement for 1904, schedule of prizes for 1905, lists of new introductions for this season, rules for judging, etc. The following notice, issued to raisers, importers and distributors of new varieties, embodies a plan on lines similar to that which has proved so useful a department in the annual work of the Society of American Florists.

The Executive Committee has decided that on and after the 1st January, 1905, a department of Plant Registration shall be instituted by the Society.

Raisers, Importers and Distributors of new varieties (whether Members of the Society or not) are requested to send to the Registrar, appointed by the Society, on or before the 31st December in every year, a list of all new varieties they intend to send out in the ensuing year. Such list to contain name and description of variety, name of raiser and distributor, and section to which the new variety belongs, on forms that will be provided upon application to the Registrar.

It is requested, if it be possible, to submit any such new varieties previously to the Floral Committee for classification.

The information thus obtained will then be inserted in the Schedule every year, and thus the Society's Official Catalogue will practically be kept up to date.

The Registrar at present is —

MR. HARMAN PAYNE,
141 Wellmeadow Road,
Catford, S. E.

HARTFORD FLORISTS' CLUB

The following resolutions were passed on the death of Alfred Whiting, the veteran West Hartford florist, who passed away on May 5, at the ripe age of eighty-one years:

Resolved, That by the death of Alfred Whiting, an honorary member of our florists' club and a veteran horticulturist, we feel that the horticultural interests of Hartford have suffered a great loss. During Mr. Whiting's long, honorable, and successful career he did much to advance the interests of horticulture in general, and as an estimable citizen and a man, he held the respect and esteem of the entire community.

Resolved, That the sympathy of the Hartford Florists' Club be respectfully tendered Miss Helen Whiting in her bereavement, and the corresponding secretary is now instructed to forward her a copy of these resolutions.

HORTICULTURAL SOCIETY OF NEW YORK

This society held its fifth annual exhibition on Wednesday and Thursday of last week at the Botanical Garden Exhibition Hall. The following prizes were given by the managers of the Botanical Garden and awarded by the council of the Horticultural Society:

Collection of flowering shrubs and trees, first prize to F. R. Pierson Co.

Collection of tulips, first to F. R. Pierson Co. Group of orchids, first to Julius Roehrs & Co.; second to Lager & Hurrell.

Collection of succulent plants, first to Frank Weinberg; second to Miss Gertrude Padwick. Collection of fresh vegetables, first to Mrs. J. B. Trevor, Howard Nichols, gardener. Azaleas or rhododendrons in bloom, first to F. R. Pierson Co. Collection of ferns in pots and pans, second to F. R. Pierson Co. Four ferns in pots, first to Miss Padwick, of Woodside, L. I. Collection of daffodils, first to F. R. Pierson Co. Siebrecht & Sons, and the Botanical Garden also staged fine exhibits.

NOTES

The Melrose (Mass.) Amateur Gardeners Association will hold its annual exhibition in the City Hall, June 17.

The New York bowlers will practice every Friday evening at Thum's Alleys, corner Broadway and 31st street, for averages on which to select the team to represent New York at the Washington S. A. F. convention.

The annual rhododendron exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, on Saturday and Sunday, June 3 and 4. The pæony exhibition will take place, Saturday, June 10.

The Kentucky Society of Florists will hold its next meeting at Louisville, Ky., on Tuesday night, June 6, and a good attendance is anticipated owing to important business that is to come up. Several new members will make their début at this time.

The Society of American Landscape Architects will hold its annual meeting at Boston, on July 7 and 8. Headquarters will be at the Somerset, and visits will be made to the parks and prominent suburban estates. John C. Olmsted will give a historical sketch of the Boston park system.

The Milwaukee Florists' Club will hold a flower show at Broadway armory in November, $1,000 in prizes to be offered. The committee on arrangements consists of Charles B. Whitnall, W. A. Kennedy, and Robert Zapnick and the committee on prizes of C. C. Pollworth, Chris Valom, and Alexander Klokner.

The Washington Florists' Club will publish a souvenir album for distribution at the S. A. F. convention next August, in honor of that important event. The book will contain about fifty specially prepared full-page views of the most interesting and beautiful public buildings and art objects in and about the great capital city, and neither time nor expense will be spared in producing a volume that will be a credit to all concerned. Advertisements are solicited by the committee and a liberal use will undoubtedly be made of its pages by the enterprising firms soliciting florists' business. J. R. Freeman, chairman of the committee, 612 13th st., will give full particulars to all inquirers.

PROGRAMME

GRACE "For these and all Thy mercies" *A.D. 1547*

Toast — The King

Proposed by THE CHAIRMAN

NATIONAL ANTHEM "God Save the King" *Dr. John Bull*

Solo — MISS GERTRUDE MAXTED

Toast — Her Majesty Queen Alexandra (our Patron), the Prince and Princess of Wales, and the other members of the Royal Family

Proposed by THE CHAIRMAN

GLEE "My love's like the red, red Rose" *Knyvett*

Toast — The Royal Gardeners' Orphan Fund

Proposed by THE CHAIRMAN

Responded to by LEONARD G. SUTTON, ESQ. *Trustee*

SONG .. "Comin' thro' the Rye" .. *Scotch*

MISS GERTRUDE MAXTED

RECITATION "The Motor Ride" *Marsh*

MR. WALTER G. CHURCHER

Toast — Gardeners and Gardening

Proposed by HERBERT HICKS, ESQ.

Responded to by W. A. BILNEY, ESQ.

SONG "The forlorn Lass" *Arr. by C. Bunten*

MR. W. L. COCKBURN

SONG . "My ain Folk" .. .. *Lemon*

MISS EDITH TURNER

Toast — The Visitors

Proposed by EDWARD SHERWOOD, ESQ.

Responded to by The REV. J. C. EYRE KIDSON

SONG "Take a Pair of Sparkling Eyes" *Sullivan*

MR. ERNEST PIKE

RECITATION "The Ambulance Man" *Anon*

MR. WALTER G. CHURCHER

Toast — The Chairman

Proposed by H. B. MAY, ESQ. *(Chairman of the Committee)*

SONG "The March of the Cameron Men" *Scotch*

MR. W. L. COCKBURN

Toast — The Press

Proposed by DAVID P. LAIRD, ESQ.

Responded to by DR. MAXWELL T. MASTERS, F.R.S.

SONG .. .. "April Morn" .. .. *Batten*

MISS GERTRUDE MAXTED

SONG .. .. "My Dreams" .. .. *Tosti*

MR. ERNEST PIKE

FINALE **Auld Lang Syne**

Musical arrangements under the direction of Mr. TURLE LEE

Hitherto, we confess to a certain self-complacency in the matter of club banquets and society dinners, tempered, however, with a touch of conscience-smiting after listening to an occasional criticism of the "dreadful extravagance" indulged in at these social affairs of the wayward American gardeners and florists. But, where stand we now in the light of the little menu which we herewith reproduce for the edification of gardeners and critics, alike. We learn from a local account of the affair that Lord Mansfield's pipers (a father and his three or four sons) played the company in to dinner. It is worthy of notice that "The Ambulance Man" follows close on the toast to "The Visitors!" The man who wouldn't wish to be a "royal gardener" after reading through the above — well, we are sorry for him! As for ourselves we simply "throw up the sponge."

A REMARKABLE COLLECTING TOUR

The following interesting note is clipped from the *Journal of Horticulture's* account of a paper read at the monthly dinner of the Horticultural Club, London, by E. H. Wilson, describing some phases of his recent exploring trip in China.

"Among other things, the truly marvelous character of China as the source of new and valuable plants, and the immensity of the field which still remains to be explored, were illustrated by the fact that while it is possible to traverse the European Alps on foot in a few days, it would need double as many months to cross that vast mountainous area in China and Thibet, which is really an uninterrupted continuation of the mighty Himalayan ranges of India. Every fresh region explored yields a fresh series of new and rare plants, and despite the five years research of Mr. Wilson, and the twenty years of Dr. Henry, the regions they have both explored represent the merest patches on the map, as compared with the whole area.

"What must we think of a country in which a single hill yielded seventy species of ferns alone, and a single district 300; while innumerable genera of other plants represented by a few species hitherto, are there found represented by scores of distinct ones, even the rhododendron ranging from huge trees a hundred feet high, down to the tiny alpine plants under its varied specific forms? Vivid pictures were drawn of mountain flanks entirely clothed with floriferous shrubs and herbaceous plants, such as the newly introduced Meconopsis integrifolia, a huge sulphur yellow poppy which, as Dr. Henry said, seemed to have tried to be a tulip, so like are its huge blossoms, and of which a fine specimen appropriately faced the president. A very large number of quite new herbaceous plants have been introduced by Mr. Wilson, and this one is one of the first to declare itself, and many others we are told are bound to follow soon; while some of the floriferous trees and shrubs on the list of introductions are predicted to become unique marvels of beauty as soon as they have reached the flowering stage in Messrs. Veitch's skilful hands.

"In these days of facile travel, we are apt to assume that little more remains to explore of the earth's surface, but it is abundantly obvious from Mr. Wilson's and Dr. Henry's remarks that in China alone there is a practically inexhaustible field, while, thanks to the lofty elevation at which most of the treasures are found, they are mostly perfectly hardy, and thus admirably adapted for general culture and enjoyment, instead of being confined to the stoves and warm houses of the wealthy. Allusion was made to the fact that a large number of plants whose botanical name of japonica indicates Japanese origin, are more properly Chinese, and in many cases were introduced thence into Japan."

PERSONAL

George Northway has been appointed gardener at Woodlawn cemetery, Nashua, N. H., to succeed Henry Dehlman who has resigned the position.

Hans J. Koehler has resigned from his position as landscape-gardener of the Essex County (N. J.) park system and accepted a position in the employ of Olmsted Bros., at Boston.

The following eminent gentlemen have visited Boston the past week: C. B. Weathered, Leonard Barron, New York; E. J. Harmon, Portland, Me.; Gibson Bros. and Arthur Merritt, Newport; P. R. Quinlan, Syracuse, N. Y.; David Fairchild of Dep't of Agriculture, Washington.

NOTES ON THE CULTIVATION OF PÆONIES

By Robert Tracy Jackson

[Continued from last week's issue]

Delicate-colored pæonies lose their color more or less in strong sunshine, so that for very best results they may be shaded to advantage. By shading I have retained delicate shaded pinks in flowers, which were entirely lost in flowers of the same variety grown a few feet away, but not shaded. Of course opening flowers in the house has the same effect as shading, saving the delicate colors, and some of the finest blooms one sees are flowers thus opened off the plant.

Pæonies have a great mass of petals, at least the double ones, so that when picked there is a large surface for loss of water. Such being the fact it is important that they be put into water as quickly as possible after cutting. The best method is to carry a pail or can of water into the garden and put the flowers instantly into water, not even waiting to cut a second bloom. Experiment has demonstrated that flowers thus instantly put into water will outlast flowers kept even a few minutes without water. This is especially important for flowers that are to be exhibited, or shipped to a distance. When a pæony is on the plant there is a continuous flow of sap to the flower. On cutting, this flow being shut off, from the suction thereby inaugurated it is quite probable that air particles are sucked in. If this is true, such air particles would tend to obstruct the vessels, interfering with the succeeding flow of water. This view is suggested to me by Dr. J. L. Goodale, as he says, in surgery one of the most important details is to prevent air or other foreign matter being sucked into the veins when they are cut, thus causing occlusions. If cut pæonies are to be shipped they had best be kept ten or twelve hours in water in a cool place, when they become surcharged with water and travel vastly better than fresh cut blooms. The same principles as regards cutting doubtless would apply to most other flowers as well.

Some method of keeping track of the names of pæonies is a necessity to any careful gardener. When planted in rows or widely scattered, lists may suffice, but the best method is good labels, if supplemented by a list so much the better. Ordinary wooden labels six inches or even a foot long are practically worthless, being soon lost by decay or broken by garden operations. Heavy wooden labels, white pine, cypress or cedar, eighteen inches to two feet long, of seven-eighths inch stock, with the ends dipped in tar, or well soaked in linseed oil, then painted on both sides, reserving a space for writing, and the name painted or written on them, are excellent, but expensive and conspicuous.

A label that is cheaper, simpler to prepare and less conspicuous as far as that feature may be desired, is a zinc label attached to an iron rod. Such labels I have used for over twenty years with entire satisfaction. The rods to which the labels are attached are two feet long, made of heavy wire one quarter of an inch in diameter; an eyelet is bent in the top and the rod galvanized after the eyelet is bent. This is an important point as galvanizing seals the opening of the eyelet. Such label rods are made to order for five dollars a hundred by wire workers in Boston. Shorter or lighter rods are less desirable as they do not go into the ground far enough to have a good hold, or are liable to be bent in gardening operations. Rods with an end flatened and an eyelet punched in it as sometimes sold are undesirable, being so sharp as to be dangerous in a garden. They are also too short and are not of sufficiently heavy stock. Zinc labels are kept in stock of various sizes to suit customers. I have preferred the English labels, number 21, measuring four inches long and one and one-fourth inches wide, with two holes punched in one end. They are large enough for any names, which smaller labels are not, and yet they are not conspicuously large.

Fresh clean zinc may be written on with chloride of copper, or chloride of platinum ink, which makes a strong black mark. As some trouble has occurred from effacement of the writing ink from corrosion of the zinc, the following method was adopted which is most satisfactory. New labels are oxidized by exposure; practically they are simply thrown on the ground in some out of the way place and left for a month or two. When the surface is roughened slightly by oxidation they are ready for use. Rub a little rather thick oil paint on the label with a rag, then write with a soft lead pencil while the paint is fresh. Such a label I have used for over fifteen years and it is almost imperishable if kept above the manure about plants, which will corrode the zinc badly. The label is attached to the rod by copper wire, which is vastly superior to galvanized wire, as the latter soon rusts and drops off, or at least soils the label. It is claimed that there is galvanic action between the copper and zinc, but after long experience I am confident that this is an error under open air conditions. In the moist air of a greenhouse such galvanic action may take place. Aluminum wire for attaching labels would probably be excellent. At the Arnold Arboretum zinc labels have been nearly worn through by the attaching wire in a short time; but there they are in trees well up from the ground and the wearing away is evidently mechanical from wind action.

To clean old zinc labels for use again they may be soaked in xylol (probably also in many other chemicals), which softens the paint, then scraped off with a knife and sand paper. The label has to be oxidized again by exposure before it is ready for use. Small unpainted wooden or paper labels for plants often have the name printed on them with rubber type, which is set up in a holder and is very convenient. The aniline rubber stamp ink used however is most objectionable, as it fades out entirely in a very short time. An absolutely permanent ink may be made as follows: To three parts of glycerine add gradually one part (by bulk, not weight) of a high grade of lamp black. Grind in a mortar until of the consistency of rather thick syrup. Spread on a thick felt pad, which is used for inking the type in the usual fashion. The pad for convenience may be kept in a tin box with a cover to exclude dust. This ink, described in 1898, I devised for museum labels and it stands weather, water, and alcohol with impunity.

In order to maintain satisfactory lists of plants in a garden, some sort of a plan of the garden is necessary. A very convenient and simple plan is one devised by my father, the late Dr. J. B. S. Jackson, and which I published in the Transactions of the Massachusetts Horticultural Society for 1884. The plan is to number the fence posts in one direction as east to west, and letter those at right angles as from south to north. This forms a sort of latitude and longitude by which a plant may be located in one's catalogue or lists. If fence posts exceed in number the letters of the alphabet, additional letters may be taken from distinctive letters of the Greek alphabet, or a modification of the Roman alphabet as AA, AB, AC, etc. Roman numerals are inconvenient for such use as being more to write, harder to read, and easier to make errors with.

A garden catalogue or lists are best written with Higgin's waterproof drawing ink which stands prolonged soaking without injury and cannot fade. In a recent experiment I soaked writing with this ink for eight weeks, immersed in water, without affecting the ink. This withstanding water with impunity is very desirable, as it is extremely annoying to have the ink of one's catalogue blurred, or even obliterated, by a splash of water, which with most inks occurs so easily from rain or otherwise when working over lists in the garden. This ink or a similar high grade carbon ink is also valuable for transient paper labels used in hybridizing, etc., and for shipping directions, or labels for exhibitions. On exhibition tables the labels of peonies and other flowers, or potted plants, are frequently defaced or even obliterated from accidental wetting, which so easily happens under such conditions, and is absolutely prevented if a suitable ink is used.

Unless supported in some way the larger, heavier pæonies are apt to be beaten down when in bloom by wind and rain and seriously injured. To obviate this difficulty some form of support is highly desirable. When planted in rows stakes may be driven into the ground at intervals, with a connecting wire run along the top; cross wires or light sticks secured to the connecting wires between plants are a material help. Another method, and one used by the late Mr. John Richardson, is to drive down two or three stakes around each plant, connecting them by a stiff wire stapled to the top of the stakes. Barrel hoops attached to stakes make very good supports, but are limited in size and are rather conspicuous. A most satisfactory support, the best I have seen, devised by W. C. Egan, with slight modifications of his description is made as follows. Three iron rods three feet long, are made of heavy wire one-quarter of an inch in diameter, an eyelet is bent in the top, and the rods are galvanized after they are cut and bent. A circular connecting wire of lighter weight, one-eighth of an inch in diameter and six feet, six inches long, is passed through the eyelets and made secure by looping the free ends over the wire in such a manner that they will slip on the wire. Thus one can have the circular wire of full size, or reduced to any smaller diameter desired, and held in the reduced size by tying one end. Such supports are very inconspicuous, being practically invisible in a well-grown plant, and have given satisfaction to several pæony growers who have tried them.

According to J. G. Baker in his revision of the species there are about two dozen species of peonies. He lists twenty-two species with their synonyms. R. I. Lynch lists and describes twenty-five species and figures the foliage of many of the species. Excepting P. tenuifolia and perhaps P. Wittmanniana (which is somewhat difficult to grow) most of the species are said to be not striking as garden flowers, and are of interest principally to the collector. They might of course be of value in hybridizing, to break the blood of cultivated forms.

The earliest pæony to bloom is Pæonia tenuifolia, both the single and double forms, which appear in May. The flowers though small, are of brilliant coloring, and well worth growing. Next in succession comes Pæonia officinalis var. rubra, the old-fashioned double red peony of our grandmother's garden. Its superb color, freedom of bloom and large size when well grown render it one of the best of peonies and indispensable in a garden. Pæonia officinalis var. rosea, a fine nearly cherry red variety of much merit, and var. alba which is a delicate pink on opening, changing to white before fading, are important additions, both as being good pæonies, and as coming early and therefore extending the season of bloom. Other varieties of officinalis are listed in foreign catalogues, but I have not seen them.

Tree pæonies, or P. moutan varieties, come with the officinalis and extend over to the season of the Chinese pæonies. Pæonia moutan, according to authorities (Lynch), is

not known in the wild state, being known only in cultivation, first in China and Japan, where it has been grown for a very long period of time. Professor Charles S. Sargent writes me that he does not know of it in the wild state, but believes that it will sooner or later turn up. It is a somewhat remarkable fact that a large growing shrubby species, and the only shrubby species of the genus, should be known only as a cultivated plant. Tree pæonies are not as easy to grow as herbaceous pæonies, are less hardy and more difficult to propagate, also it is not as easy to get really choice varieties. As far as known, all the tree pæonies in the market are grafted on moutan, albiflora or officinalis stock. Auguste Dessert claims that they do best grown on moutan stock, although it is difficult to get roots of this stock large enough. He says that they use Sinensis [a variety of albiflora] stock and cut scions with two or more eyes and so disposed that at least one eye is beneath the surface of the ground; this eye greatly encourages the formation of roots in the graft. Kelway gives interesting notes on raising moutan seedlings and in regard to grafting says: "First procure a sufficient qauntity of tubers of P. Sinensis; cut these into lengths of about six inches; then take grafts from the sorts you wish to increase and insert these into the upper end of the tuber in the ordinary way of cleft-grafting, tie securely and cover the junction with grafting wax so as to exclude the air. These should now be potted into five-inch pots, using a rich compost; the pots should be plunged into frames unheated; give a good watering, and cover the frames with a thin mat to partially exclude light. In the winter they should have an extra mat to protect them from severe frost. The best time to perform this operation is in the months of August and September." Tree pæonies do well on officinalis stock as I know from experience. The Japanese I believe graft on moutan stock alone; but one difficulty with that is that shoots from the stock cannot be distinguished from shoots from the scion until blooming, whereas shoots from albiflora or officianalis stock are detected at once. Layering as suggested by some writers, though slow, would doubtless yield most satisfactory plants.

The Chinese pæonies of the Pæonia albiflora stock come next in season of bloom. The varieties as known appear to be the results of variation of the stock, hybridization, or the crossing with other species, having entered in a very little if at all, as far as one can judge from the character of the foliage. They are in bloom about the first of June for the earlier varieties and extend into July for the last blooms of the later varieties. The single varieties are usually amongst the earliest to bloom, but some double varieties are nearly as early. In the past two years the early Richardson seedling, George B. Sowerby, has been in full bloom on the fourth of June. The latest of the choice seedlings raised by Mr. John Richardson, named Milton Hill, this year had secondary blooms still left in July. We may therefore by selection, starting with Pæonia tenuifolia, get about six weeks or a little more of flowering season for peonies. It would be desirable for dealers in peonies in their catalogues to give more explicit statements of season of bloom, especially the earliest and latest varieties as an aid to purchasers.

In considering the qualities of a pæony, color and form are of the first importance. Freedom of bloom is also an important feature, for some varieties while of good form and color are such shy bloomers that they are from this quality not desirable for the general cultivator with few varieties. Extra freedom of bloom on the other hand is a feature especially desirable. One other point of much importance is strength of stem. Many fine pæonies have such weak stems that they flop over hopelessly from their own weight, others stand erect, thereby developing their flowers much better and showing off to infinitely greater advantage in the garden. Lasting qualities is a feature of importance, especially to the dealer in cut blooms.

Seedlings of Pæonia albiflora varieties require four to six years to bloom. The seed should be planted as soon as ripe in rich, mellow soil, if protected by frames so much the better. They are best left without disturbance until blooming, but if planted too thick, will have to be transplanted. Very double flowers rarely set seed, yet an occasional capsule will develop on an otherwise sterile plant. Harrison says that: "Seedlings will often bloom single for years and then turn double." I have never seen such a case. Doubtless seedlings may improve in size and quality with age, but as far as my experience has gone the first bloom, if strong, is a very close indication of what may be expected as the permanent character of a seedling.

It would be highly desirable for pæony dealers to insert in their catalogues after the names of varieties the name of the originator. It is only fair credit, and adds much to the interest in these and other plants to know something of their history, who raised them and when. This is done somewhat, but rarely systematically as it should be. Messrs. W. A. Peterson of Chicago, and C. W. Ward, of the Cottage Gardens, Long Island, in their catalogues for 1904, note the originators of pæonies very fully, also the Lemoines of Nancy, France, do the same, though not as fully; on the other hand, the Kelways, of Langport, England, list their own seedlings, but ignore the names of other growers.

The American Pæony Society is studying the nomenclature and seeking to ascertain as far as possible when and by whom each variety was raised. The results of their inquiries are looked forward to with interest. Professor John Craig of the Horticultural department of Cornell University, at Ithaca, New York, in conjunction with the American Pæony Society, is attempting to collect and grow all the known varieties of herbaceous peonies. By this means the synonymy can be straightened and the really best varieties ascertained. He has already gathered over six hundred varieties, which are to be grown in a fine piece of land well adapted for peony culture. Such experiments are of a high degree of value and interest, carried on by recognized experts, under auspices of an impersonal character, and where they can receive the benefit of a critical study best found in such a horticultural center. Similar studies of other groups of cultivated plants it is believed would be productive of much good.

Another thing that might well be done by the American Pæony Society, or by a horticultural society, or journal, is to prepare and publish a bibliography of the literature of the pæony, including references to published figures of species and varieties. Such a bibliography could, to advantage, be annotated by the editor. Many short but important articles are apt to be overlooked, and a cultivator wishing to see a figure of a given variety, or species, may have a long search before finding it, or may take the trouble without reward, because no published figure may exist. Bibliographies of special topics are an important feature in scientific subjects, and it seems that no more important matter could be taken up for the advancement of horticulture than lists of published papers, or larger works, on our more important cultivated plants.

ENGLISH NAMES FOR FLOWERS

The recent notes upon English names for flowers are especially interesting to those who find in them a touch of poetry or a suggestion of old-time domestic lore. In newer lands, however, such names may easily become misleading, as they are often applied in recognition of a fancied resemblance. Here, in New Jersey, Caltha palustris, one of our earliest spring flowers, is generally called Cowslip, though it is also known as Marsh Marigold and Swamp Buttercup. The name Honeysuckle is here applied to the native Columbine, Aquilegia canadensis, and also to two Rhododendrons — R. viscosum, called White Swamp Honeysuckle, and R. nudiflorum. For the latter I prefer the name of Pinxter Flower, given by the Dutch settlers in recognition of its Whitsuntide bloom. The large, fleshy galls, pleasantly acid in flavor, produced on this Rhododendron by a gall fly, are called Pinxter Apples. We find the fragrant little Epigæa, the Mayflower of New England, described as Ground Laurel, Trailing Arbutus, and Shad Flower, the latter being its name along the New Jersey coast, where it is in bloom when the shad is ascending rivers to spawn. Here Amelanchier canadensis becomes Shad Bush. When in the middle west I was surprised to hear Forsythia called Golden Rod, which was distinctly confusing. Then there is Bittersweet, which I think in England means Solanum Dulcamara; here it means Celastrus scandens, also called "Waxwork." The graceful wild Carrot, an "assisted emigrant," from Europe, is called Queen Anne's Lace or Bird's-nest; I admire it greatly from an æsthetic standpoint, but it is a most pestiferous weed. The Massachusetts Legislature is now considering a special Bill directed against it. Side-saddle Flower seems rather far-fetched for the Sarracenia, but one has the choice of Whip-poor-Will's-shoe. Ghost Flower seems more appropriate than Indian Pipe for the ghastly Monotropa. I cannot close without expressing my undying disgust for the unpoetic soul who first called Kalmia latifolia "Calico Bush." Of course, the name sticks, though we insist that it is Mountain Laurel. — EMILY TAPLIN ROYLE, in *The Garden*, May 13, 1905.

MEMORIAL FLOWERS

Tributes to those who have passed beyond the barrier, in the mysterious travel of the human lot, mean something to the living, whether we can or cannot hold fast to the tender hope that in this way our love is somehow made known to those so long silent. Flowers give one of the most natural means of expression for this conscious loyalty and remembrance. With their delicate appeal to the spiritual sense and their loveliness, which surely partakes of the character of the ideal, they are far more in harmony with the longing of the heart than are those more permanent symbols of grief in marble or granite which we erect as witnesses to lives no longer tethered to earth. Those stony memorials suggest to some of us perplexing thoughts, so useless are they for any service, so hard, unbeautiful, and unsatisfying to the finer sense. In every local cemetery how many thousands of dollars are expended by the community that might, we sometimes think, subserve a better use.

The observance of Memorial Day brings no such questioning. — *Country Gentleman.*

Ward's Pond, Olmsted Park, Boston

The illustration shown herewith was used by us as a frontispiece a few weeks ago, but without descriptive notes. The number of inquiries we have since received regarding the material used in the planting, etc., seems to indicate a widespread interest in the subject of aquatic gardening, and in deference thereto we again present the illustration and give the following list of water and bog plants used in the planting by Mr. Pettigrew of the Boston Park Department.

Zizania aquatica or wild rice grass; the tall grass seen in the foreground. Iris Pseudo-acorus, a European iris. Sagittaria variabilis or common arrow-head. Pontederia cordata or pickerel weed. Decodon verticillata; there is in a lake near Milwaukee, Wis., an island formed by the interwoven roots of this plant. Scirpus or flags in variety. Juncus in variety, native reeds. Lythrum salicaria, purple loose-strife. Senecio clivorum. Alisma plantago or native water plantain. Ranunculus Lingua, a British wild plant. Caltha palustris or marsh marigold.

These are mostly bog plants and are used around the borders of the pond. Out in deeper water is a fringe of water lilies, the whole arrangement forming a very attractive picture.

CATS vs. BIRDS

The following pathetic defense of the cat as a gardener and indictment of the blackbirds and thrushes, appears in *The Garden* London, for May 13th:

The article entitled "Round About a Garden" in your issue of the 29th ult. is in such direct contradiction to my experience that I feel impelled to give the other side of the picture. Your contributor remarks that it is "for want of blackbirds that slugs abound," and makes a great onslaught on the harmless, necessary cat. It is three years since I had the misfortune to lose my cat, shot by a gamekeeper. Since then the birds have made very free with my garden, and blackbirds and tits nest all over it. I eed them in the winter. In the spring the tits destroy the Cherry-buds and strip the bush fruit. Later on they peck holes in the apples, so that these have to be harvested before they are ripe. The blackbirds and thrushes are so assiduous at the strawberry beds that no netting but wire-netting will keep them out. They tear at fish-netting with their strong beaks till they have made a hole large enough to wriggle through. Of course, the sparrows pull the heads off primroses and polyanthuses and crocuses and even fritillaries, and if they do eat green fly, as Mrs. de Lacy-Lacy says, they do not seriously diminish their numbers, for I have to syringe my roses twice a week and "hand-pick" the grubs. Meanwhile the slug pest goes on unabated. I never saw a blackbird burrowing for slugs, though he does seem to get some leather-jackets. He goes to bed when the slugs come out to feed, and I gather them myself in thousands by lamplight. My cat was a most useful gardener, for she kept the pretty birds at a distance, and now that voles, wood mice, house mice, and rats have taken to devouring crocus bulbs, iris roots, and the young green of my carnations and columbines, I think it is high time to call in the coöperation of pussy. — H. M. SWANWICK, *Knutsford, Cheshire.*

TREE PLANTING IN NEWARK

A lot of good work has been done by the municipal tree planting commission of Newark, New Jersey, which was appointed last October. Its report shows that more than 750 fine trees have been planted. Besides planting trees, the commission has seen to it that the fine elms in the several small parks in the center of Newark are not devastated by scale or insects. The length of street planted on both sides is estimated at five miles. The cost of the trees was assessed on the property owners. None of them objected, and all appeared to like the idea of having good shade trees in front of their buildings. Property owners who desired to plant trees on their own responsibility were encouraged and assisted in making selections by the commission. About one-third of the entire number of trees set out are elms, either of the American or Norway sort. There were many linden and poplar trees planted also. — *Amer. Civic Asso. Clipping Sheet.*

CUT-FLOWER MARKET REPORTS

BOSTON This market has undergone a great cleaning up of all bright and moderate-priced flowers. It is no surprise that the high-priced special Beauties were in evidence in the wholesalers' storage boxes after the trade was done, for the Decoration Day demand does not lean to extravagance in this direction. There is also left unsold a certain surplus of white material which is always in excess at this time, such as astilbe, stock, lily of the valley, etc., and in sympathy with it the exotic flowers — Bride, Kaiserin and Carnot roses and all white carnations also hang fire. On the other hand, all colored material has had an enormous call carrying along with it, of course, an immense quantity of white. Nothing sold better than the lower grades of American Beauty roses, there being apparently no limit to the capacity of the market for the short-stemmed, low-priced cut. The aggregate of flowers sold through all channels was, according to the estimates of good judges, the largest ever handled in the same period of time in this section. Neither pæonies nor rhododendrons were in bloom here. Market prices on colored roses and colored carnations – particularly the scarlets and deep reds of the latter, started at a pretty stiff elevation and remained there, throughout. A good many roses and carnations of ancient mien were in evidence; these found in the street peddler their only friend and the price they brought — low even from the standpoint of the street speculator — was all the stuff was worth.

BUFFALO This year's Decoration Day business has been one of the best on record. The dull business of the early part of last week gave way to a lively awakening and at the end of the week a good hustle was on. There was a strong demand for pæonies, but they were unobtainable. The supply of carnations was limited and prices ruled high. Roses moved well except in the case of the high-grade Beauties which were in light demand. A good supply of outdoor material came in and sold well. White stocks found a good market on account of an unusual demand for funeral flowers. Lilies, sweet peas, and gardenias were in heavy supply and sold well.

CHICAGO The condition of the market for the greatest floral holiday of the year goes on record as the biggest ever experienced.

The largest growers here, who added immense blocks and ranges of glass the past year, report the Decoration Day demand away above their increased supply, and shipping trade far ahead of the record. The heaviest shippers in Chicago credit it to advertising in HORTICULTURE and it can be proven HORTICULTURE has already widened the field of demand. It was on American Beauty where the demand was light, the heavy cut being far above the needs of the trade. Liberty, Bride, and Bridesmaid, fared better; the whole available supply was consumed, the best sales being on medium and lower grades. The carnation was queen of flowers this 30th of May, if the unprecedented demand would indicate anything. Colored carnations were in preference and the climax came on Saturday, Sunday, and Monday, when the demand was such that all orders were only partly filled. It is conceded that at least a quarter million more were necessary to fill all orders complete. Pæonies again have proven an all-important feature at this season. The supply was lighter than last year. Home-grown stock being held back by the cool weather. This year's southern supply was more easily controlled for Decoration Day by securing the crop in cold storage. Lilies were equal to the demand and cape jessamines were in over supply, but of finest quality. Lily of the valley had a good call, both outdoor and indoor stocks being very fine. Ferns have advanced. All other green goods in ample supply.

CLEVELAND Monday was a big day for the sale of plants. In front of the cemetery entrances and all along the sidewalks for blocks were lined up stands filled with plants in great variety, hanging baskets already filled, hanging on tripods, bouquets for immediate use, etc. The sale of plants was unprecedented, geraniums taking the lead, salvias next. Hydrangeas also sold well. Thousands of plants of all kinds were bought by school children to decorate graves of soldiers. Wholesale prices on geraniums, salvias, and cannas were $6.00 to $7.00, coleus, $3.00, caladiums, $7.00 to $8.00 per 100, and hydrangeas and ramblers from 35c. to $1.50 each.

The cut-flower trade was excellent. There were some very pretty window displays, symbolic of Decoration Day.

LOUISVILLE Business conditions moderately satisfactory during the past week. All cut flower stock abundant. Pæonies at their height and exceedingly popular. Carnations and roses fair to medium, with good demand. Sweet peas and promiscuous flowers in good supply and selling well.

NEWPORT This year Decoration Day eclipsed all former occassions. Helping to make it such was the elaborate ceremony just inaugurated by the ladies' auxiliary of the G. A. R. attendant on the strewing of flowers on the water, which took up great quantities of cut flowers. In former years, also, it was the custom of the veterans to rely in great part for their supply on the generosity of others, whereas this year for various reasons the flowers were obtained in great measure under conditions vastly more encouraging to those whose business it is to grow and sell. The fact that Decoration Day has become a recognized occasion by every one for a tender and visible remembrance of departed ones, has now placed the day among the foremost in business importance to dealers in plants and flowers.

Local dealers had to draw upon out of town sources to a considerable extent, especially for the more expensive flowers which were used to a far greater extent than formerly.

For plant decoration the most in demand were geraniums, pink being the favorite color and Poitevine the variety in greatest demand. There has been an unprecedented run on this variety all spring. Begonias were also purchased and planted in large quantities.

The great advance in the volume of business carried with it a slight advance in prices, but Decoration Day is never taken undue advantage of in regard to prices. Dealers are, as a rule, generously contented with larger sales, and that is what ought to be most desired.

The people of Newport have unquestionably done their share toward making Decoration Day the most distinctive floral day of the year.

NEW YORK The volume of business was largely augmented on Saturday and Monday, in consequence of the heavy demand from cemetery florists. Their requirements were met by a large supply of outdoor stock, also carnations and roses of which there was an abundance. The carnation held the lead in general favor; roses were not called for in sufficient quantities to cause any advance in prices. Carnations still hold their own better than the roses do, the change for the worse in the case of Beauty, Bridesmaid, and Bride becoming more apparent daily.

PHILADELPHIA Early part week preceding Memorial Day, pretty good; latter part much better; prices stiffened and stock was not nearly as plentiful. Roses moved well under a plentiful supply, and prices were as good if not better than might have been expected. Carnations were scarce towards the last, but a good deal of poor stock had been salted and came in with a slump towards the last. They went to the dump mostly. The fellow with poor stock seems to be the fellow with the salting fever ingrained, and no amount of telling nor experience seems to make any impression on him. The prediction of from two to five for carnations in our last week's notes was realized for fine stock, although the five grades were few and far between.

Pæonies on account cool nights, were not as plentiful as expected in our market, nevertheless enormous quantities came in from various points and everything was swept up clean by the 30th. Ed. Swayne's Festiva Maxima went readily at $1.50 and $2 per dozen and the general run of stock readily brought 75 c. to $1. Wagon load after wagon load went out from Pennock's and Niessen's on Sunday and Monday to all points from Portland to Pittsburg, and it is safe to say that this year has been the greatest outside shipping for cut flowers ever experienced. Sweet peas came in for a good deal of popular demand especially for funeral work, but they are not big and showy enough for the general Memorial Day trade.

There was no extra demand for lily of the valley. Quality was very good. Outside stock is now over; but latter does not cut much figure in this market and has never affected normal prices. Cattleyas and other orchids were in small supply and meager demand. Outside stock such as cornflower went well, but iris and hemerocallis were slow. Hardy ferns and greens plentiful and in good demand. The great feature of this year's market was undoubtedly the enormous business in pæonies. Being scarce in a way in Philadelphia the demand from points further north can readily be imagined. No doubt there will now be a big glut.

Nothing new in plant market. The only noticeable feature was fine weather and big demand. Take it for all in all probably the best memorial plant trade on record. Smiles all around!

The busiest men in the outside memorial shipping trade as far as our observation went were Reid, Baker, Pennock, Muth, and Niessen. No time to talk to anybody. They were deaf, blind, and dumb to everything in the shape of a correspondent!

PHILADELPHIA NEWS NOTES

Commodore Westcott has fixed the annual opening of the Waretown Rod and Gun Club for June 16th. A large number of the leading lights of Philadelphia, New York, Baltimore, and Washington, will grace the occasion with their presence.

Joseph Meehan and his family of Germantown, have the sincere sympathy of the community in their bereavement. Mrs. Meehan (nee Emily Gaul) passed away rather unexpectedly on May 27th, aged 64. She had gone through an operation for cancer about eight weeks ago and while apparently quite recovered a sudden breakdown occurred with fatal results. Mrs. Meehan was much respected in her neighborhood and was noted for her many exemplary and amiable qualities. A son, Charles E. Meehan, is manager of the Phila. Flower Market.

A. B. Cartledge of the firm of Pennock Bros., is noted as an enthusiastic yachtsman. His boat, the *Emily*, is at present getting tuned up for a trip to Marblehead in July. Being an official of the Tacony Yacht Club he will with other officials and guests be an interested spectator of the power-boat race from College Point to Marblehead, on July 26th. The *Emily* is six feet too long, else she would no doubt be in the contest and give a good account of herself.

Jno. Burton, Deacon Harris and Commodore Westcott made a flying trip to see their old friend Jno. N. May, Summit, N. J., on Thursday. Mr. May, while largely recovered from his recent illness, is still far from spry and those who wish to enjoy a chat with him must, as a rule, make the journey to Summit. It's worth the money! Long may that genial personality be spared to us and may his powers recuperate. Here's to his very good health.

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

The *New Haven Chronicle* published a fine portrait and sketch of the career of Frank S. Platt as a man prominent in the professional, political, and social life of the city.

Rose, Wayne Co., N. Y. — The onion crop has been almost wholly abandoned in Rose this year because of the failure of the crop in recent years, due to the wet seasons. On the onion muck this year other crops, such as potatoes, celery, cabbages and mint, will be raised. The onion crop is said to be profitable, when the yield is fair, even at 25 cents per bushel. — *Produce News.*

Fitzgerald, Georgia. — The dreaded potato beetle, so destrucive in northern States, threatens to nearly ruin the crop here this year. Young potatoes are now being gathered, and the ravages of the pest are so great and the insects so numersus that the task is not a pleasant one. It is supposed that the larvæ of the bugs have been brought here in potatoes shipped from the North, as the beetle was practically unknown in this section until after heavy importations of potatoes from Northern States. — *Press Despatch.*

The above from the *Country Gentleman.* We think our friend Hammond of Fishkill, N. Y., has something that will make quick work of those beetles. Georgia needn't suffer.

CATALOGUES RECEIVED

Safety Automatic Ventilator and Heat Regulator Co., Lake George, N. Y. Descriptive circular.

Hinode Florist Company, Whitestone, N. Y. Catalogue of Japanese garden specialties. Handsomely illustrated.

H. F. Michell Co., Philadelphia, a timely pamphlet of lawn and garden seeds, spraying and mowing implements, etc., for May.

Franz De Laet, Contich, Belgium. Price list of cacti and other succulents. A very comprehensive catalogue of these odd plants, freely illustrated.

Charles W. Percy, Boston, Mass. Shipman Automatic Steam Engines. Illustrated with interesting diagrams of boilers and engines for use with kerosene fuel, for greenhouse and outdoor spraying, etc.

Wadley & Smythe of New York and Newport, issue a set of views in gardens in Newport, Westbury, and elsewhere showing artistic plantings done by them, formal gardens, and describing their methods of moving large trees and their use for immediate effect. It makes a very handsome book.

Ellwanger & Barry, Rochester, N. Y. General catalogue, also list of novelties and specialties for 1905. A complete list, and descriptions of fruit and ornamental trees and hardy herbaceous plants. Among the novelties listed are Lemoine's new hybrid deutzias and philadelphuses, lilacs, Chinese pæonies, phloxes, and hardy roses of various classes.

W. Baylor Hartland & Sons, Cork, Ireland, "Temple Show" Tulips and rare Daffodils. The bulb-grounds at Ard-Cairn are well known by reputation to many of us who have not yet had the pleasure of setting foot on trans-Atlantic shores and this catalogue is in itself enough to tempt one to pack up as soon as daffodil-time comes and see for one's self what is so well described therein.

LILIUM ROSEUM VAR. MULTIFLORUM

Max Leichtlin in *The Garden*, London

This lily is a native of the lower ranges of the Indian Northwest Himalayas, and is seldom seen in European collections. It is not perfectly hardy, as growth begins early, and the leaves are likely to be damaged if it gets no protection or a sufficient covering of snow. It will do well in the south of England or grown in a frame or pot. It is a stately plant well worth some care, especially

LILIUM ROSEUM VAR. MULTIFLORUM

the variety which I had the good fortune to raise. This produces as many as fifteen flower-stalks from one bulb, and the main stems rise to a height of three feet, showing as many as forty flowers of a pleasing pale purplish rose. It is of easy cultivation, prefers a rich soil, and after dying down the bulb should be taken up and kept dry as long as no new roots are visible; then replant it, but not too deep.

LOS ANGELES HORTICULTURISTS MAY ORGANIZE

The several arrivals in San Francisco during the week ending May 27, of J. C. Vaughan and P. H. Plath, president and State vice-president, respectively, of the S. A. F., and Frank Pelicano, Pete Ferrari, and O. H. Sanborn, prominent members of the Pacific Coast Horticultural Society, all hailing from Los Angeles, made so much of an impression in San Francisco that something had been doing in Southern California's principle city, an investigation was made, resulting in securing the following report:

To discuss the project of forming a Southern California horticultural society, there was a rally a few days ago in Los Angeles of florists and plantsmen of that section of the State. Mr. Vaughan, by virtue of his holding a midwinter and midsummer habitation in south California, had joined with the Los Angeles residents in the trade in calling the rally. The other four gentlemen named, San Francisco and Oakland residents, had responded to the rally call as representatives of their fellow craftsmen in the central and northern sections of the State where there is horticultural organization life in which they hold membership, to tell at the rally the trade benefits there are in such organization comradeship.

An adjourned meeting of this rally, which numbered only six less than one hundred florists, plantsmen, and flower growers, is expected to be called next week, when it is thought a permanent organization will be effected.

COLEUS SALICIFOLIUS AND MONSTROSUS NANUS

By M. Herb, in Möllers *D. Garten Zeitung*

An even, low, compact growth and long, narrow, and gracefully drooping leaves are the significant features of this new, willow-like leaved coleus, and make it a distinct variety among all the coleus hybrids that come true from seed. The leaves of this coleus are cut irregularly, have a wavy surface, and their colors are so distinct, lovely, and manifold, that this plant can successfully compete with many flowering plants in color effect.

The second plant mentioned in the heading is the extreme opposite of the other, being furnished with very broad, half-globe-like leaves curled back on all sides. It acquires thereby that compact bushy shape, which is so desirable in a pot plant. Its colors are also very good. This variety was introduced in 1895, but only now has it begun to come true from seed.

Platt & Giger were among the sufferers by a fire in the building in which their store is located, at the corner of State and Main streets, New London, Conn., on May 24.

MACHINE FOR CLEANING BOILERS

United States Consul Marshal Halstead
Birmingham, Eng.

Mr. J. Morrison, of Glasgow, describes in the Engineering Supplement of the London Times, of March 15, 1905, a machine for keeping the smoke tubes of marine and stationary boilers clear of soot by turning the retarders or spirals ordinarily inserted into tubes to break up the gases on their way through. Instead of the customary sweeping out of the tubes, say, at the end of a trip of a steamer, or weekly in stationary engines, and being satisfied with this occasional cleaning, though it is known that within twelve hours the tubes will be as dirty as before, the operator works the mechanism referred to by a handle outside the smoke box a half minute every watch. Rotating the retarders disturbs the soot and the draft smoke (the smoke-box doors being always shut), blows the soot toward the funnel, thus clearing the tubes. As five-sixths of the heating surface of a marine boiler is tube surface, clean tubes naturally give great economy in coal consumption. The device has been used for some months on the steamship *Pirate*, and is now being fitted into a number of Glasgow steamers. Mr. Morrison believes it to be the only mechanism that will work within the smoke-box of a steamer or locomotive where the temperature (melting zinc, or 750° F.) prevents lubrication and where soot and dust gather.

BUSINESS CHANGES

N. F. Higgins has purchased the store of C. F. Fairfield, at Springfield, Mass.

Louis J. Reuter has relinquished his position as manager of the Port Allegany Greenhouses and removed to 60th street and Gibson avenue, Philadelphia, where he has leased a greenhouse establishment.

The Garden, London, for May 13th contains a fine colored plate of Phaius tuberculosus as a supplement. The interesting information is given that this terrestrial species introduced in 1900 as Phaius Warpuri was a rediscovery of the old tuberculosus of Blume and that the epiphytal species known for the past twenty years as P. tuberculosus had been a case of misnaming. The latter is now known as P. simulans on account of its remarkable resemblance, especially in the color of the flower, to the original.

TIMBER RESOURCES OF LIBERIA

From United States Consul-General Lyon,
Monrovia, Liberia.

Liberia's forestry resources offer an inviting field for a lucrative business in hard woods. The virgin forests consist of woods of great commercial value, and there are ample water facilities for sawmills. There are two varieties of mahogany — red and gray; four varieties of oak — red, streaked, white, and whistmore; cedar, rosewood, mangrove, burrwood, white and black gum, mulberry, brimstone wood, red peach, pepper wood, white mangrove, persimmon, iron wood, greasy peach, poplar, cherry, hickory, saffron, ebony, and many other woods common to the tropics. Some of these possess singular qualities. The greasy peach lasts indefinitely, and is proof against insect attacks. The heart of the mulberry is incased in a very thick sap, which succumbs readily to decay, but the heart itself, which is capable of the highest polish, is tough, and its durability is indefinite. The qualities of ebony and mahogany are well known. The African cedar is similar to the American pine, very light in color, takes a beautiful polish, and is used for ceilings. The brimstone wood and the hickory, when seasoned, are so stubborn in their qualities as to defy penetration.

GREENHOUSES BUILDING OR PROJECTED

MAYWOOD, ILL. — Mr. Collatz, two houses each 15×200.

MAGNOLIA, N. J. — Stephen Green, one house.

AQUEDUCT, N. Y. — G. F. Neipp, house, 200 ft. long.

MONTREAL, P. Q. — Hall & Robinson, two houses.

FRANKLIN, PA. — McElhinney Bros., house 25×135.

BOUND BROOK, N. J. — A. C. Zvolanek, two houses.

WINCHENDON, MASS. — M. E. Convers, conservatory.

LIST OF PATENTS

Issued May 23, 1905

790,400. Banana Shipping Crate. Frank Schmitz, Chicago, Ill.

790,552. Ladder. William G. Bertram, New York, N. Y.

790,760. Hoe or Weeder. Charles W. Stuart, Newark, N. Y.

790,834. Fruit Cleaner. George W. Harvey, Monrovia, Cal., assignor of one-half to Norman Williams, Los Angeles, Cal.

790,837. Fruit-Picker's Bag. Frank L. Hepner, Covina, Cal., assignor to Joseph Wilson, Duarte, Cal.

790,851. Fruit Produce and Refrigerator Car. Ernest M. Phillips, Castile, N. Y.

HORTICULTURE

Vol. I JUNE 10, 1905 No. 28

VANDAS IN CHICAGO

Devoted to the FLORIST, PLANTSMAN, LANDSCAPE GARDENER and Kindred Interests

Published EVERY SATURDAY At 11 Hamilton Place, BOSTON, MASS. Subscription, $1.00

Something New for Decorating

Now that the season for Wild Smilax is over and no more stock can be supplied, I wish to call your attention to the Branches of the Huckleberry Tree as a most elegant Decorative Green.

It is largely used by the Florists of the Pacific Coast, Washington, and Oregon, in Decorations. The Branches are FLAT, very thickly furnished with exceedingly lustrous green leaves, and it seems to adapt itself to almost any position in decoration that the Wild Smilax can be used in.

As the Introducer of Southern Wild Smilax, I think you can give me credit for knowing a good thing when I see it, and I am convinced that in Huckleberry Branches, you will have a very beautiful substitute for the Wild Smilax, of great value to you through the months of May and June.

I am anxious to get the Verdict of the Floral Trade on this introduction and offer to send you a Case on Suspicion, price $2.50 per case if it suits you, nothing if it does not. Will you try a case on these terms?

Yours very truly

CALDWELL THE WOODSMAN

The Man who gave you the Wild Smilax

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Water Lilies

The nymphæas are an indispensable feature of the water garden. For best results they require a rich loamy bottom and the hardy sorts will survive the winter all right provided the water is deep enough so that the roots will never be frozen. Our common white water lily — Nymphæa odorata — is a typical example. While it is considered hardy it will always be found in ponds or rivers which do not freeze solid. Other hardy lilies most desirable are Nymphæa odorata rosea (pink) and other odorata varieties of different colors, N. alba (white), N. blanda (white), N. reniformis (yellow), and the Marliacæa hybrids.

During the winter the tender kinds must be protected and this is done most easily by growing in tubs or boxes submerged in the pond, which can be taken out on the approach of cold weather and the plants set in moist sand and kept there during the winter at a temperature of 55°, with protection from mice. The tender sorts contain all shades of blues, crimsons, and yellows, some flowering in the day-time and others at night.

Most hardy kinds are propagated from seed. This is sown when ripe, in February or March, in pans filled with good potting soil, and covered with a layer of sand. The pans are then submerged to a depth of two inches in water kept at a temperature of 80°. When the seedlings have two or three true leaves they are pricked off into pots and pushed along. While the tender sorts are often raised from seed the general practice is to plant the bulbs formed on the stored roots directly into submerged receptacles. The hardy nymphæas can be set in their permanent quarters any time after the ice is out of the pond, but must be gradually hardened off beforehand. Tender sorts are not set out until settled warm weather, the last of May in northern climates.

Many a stretch of bare water could be turned into a delightful nook by the judicious planting of lilies, reeds, cat-tails, bamboos, eulalias, papyrus, and grasses backed with willows, alders, laurels, andromedas, and other water-loving plants for a back-ground and wind-break.

In restricted grounds and for winter-forcing, tubs or barrels will furnish quarters for growing the water lilies. For this purpose the less vigorous growers should be selected, as the Laydekeri hybrids, Nymphæa odorata minor, and N. pygmæa, with its variety Helvola, for hardy sorts. N. elegans, and N. zanzibarensis with its varieties azurea and rosea are the best day-bloomers of tender nymphæas. For a night-bloomer we have N. delicatessima. The amount of soil for these will vary with the variety from three to five cubic feet. This should be a good compost of one-half sod and one-half cow manure. When winter comes tubs containing hardy sorts can be put in a cellar or plunged and covered with litter sufficiently deep to prevent solid freezing, while those filled with tender kinds can be emptied and the plants cared for as previously mentioned. As this is an artificial method the plants must be kept well fed and the water free from algæ.

For park purposes the Victoria regia, with leaves seven feet across, or its improved form Trickerii, is not to be surpassed; but in northern localities it is not hardy and unless the pond can be heated it will not prove a success. Where it is wanted the seed is best sown in November or December, and the plants kept growing steadily in water at 80° or 85°, repotting as they grow. In this way suitable plants can be obtained in one season. As it requires an extensive area, and a high temperature, it is not adapted to the conditions of the average growers.

R. I. Adams.

British Horticulture

VARIATION OF SEX

An interesting study for horticulturists is the influence of climate upon sex development in plants. In a paper, written by Mr. R. Lewis Castle, and published by the Royal Horticultural Society, the fact is convincingly shown in the case of varieties of strawberries introduced into or raised in America. Some of these, Mr. Castle states, have become staminate (male) only, and other pistillate (female) only. In all the American tests it is usual to state in the description which strawberries are staminate and which pistillate, and when the latter are planted in beds, a line of a variety which produces pollen freely is planted with the other to insure fertilization, about one line in ten being sufficient for the purpose. A typical American variety which will illustrate this is Crescent Seedling. It is distinctly pistillate in the United States, whereas in this country it produces perfect flowers, and sets its fruit most readily, cropping heavily in favorable seasons. A well-known British variety, Stirling Castle, which is also pistillate in America, and does not set its fruit without the aid of pollen from another variety, is in this country quite self-fertile, and bears constant crops, being one of the varieties specially favored by some large fruit preservers for jam making. Mr. Castle is of opinion that above the freezing point the staminate portion of the flower is more readily affected by changes of temperature than the pistil.

A "BOOM" THAT FAILED

At the commencement of the year the arrival of four apples, stated to be seedless, from Mr. Spencer's nursery in Colorado, was energetically advertised in the papers. The half-penny dailies, always alert for the latest sensation, made the most of the novelties. One of the specimens was sent to King Edward, who sent a message through his private secretary, to the effect that he was "much interested in seeing the apples." A second was forwarded to the editor of a monthly magazine, which has participated in the "boom." Two were sold by auction in Covent Garden in aid of the unemployed in East London. Messrs. W. B. Shearn, florists and fruiterers of London, purchased the pair for £3 (pounds), and for several weeks they were placed on view in a glass case in the shop window. Recently in the presence of a party of journalists, Mr. Shearn cut open the apples, which were found to contain not only pips but cores of a harder substance than those of a Tasmanian apple, cut by way of contrast. Mr. Shearn has since been advertising for sale seeds from these so-called seedless apples! The English introducer of the new comers now asserts that the dissected apples are not the same as those which were received from Mr. Spencer, but his statement is denied by Messrs. Garcia, Jacob & Co., the auctioneers, and by the purchaser. The revelations have completely exploded the "boom," which has been so zealously worked in the interests of the Spencerian fruit for some months past, although the horticultural papers have been very cautious in accepting the highl colored statements put forward.

FRUIT GROWERS COMBINING

The United States are far ahead of this country in the combination of florists and fruit growers. During the last two or three years an effort has been made to remedy this defect. The fruit and vegetable merchants have now a federation, representing all parts of the United Kingdom. A National Fruit Growers' Federation has also been formed, the annual meeting of which has just been held. The membership is not as large as it should be, and arrangements are now to be made to extend the list. Three members of the Council have taken part in an inquiry conducted by the Board of Agriculture as to the position of the fruit-growing industry. The report is about to be issued, and this will contain some important recommendations. One of these is a proposal to form an experimental farm, under the Board of Agriculture, at which various trials can be made, and researches conducted as to the best methods of suppressing diseases and insect pests. One outcome of the committee's deliberations will undoubtedly be the extending of the work performed by the Board of Agriculture so as to embrace more effectually the fruit-growing interests. An important conference is to be held in the autumn, under the combined auspices of the Royal Horticultural Society and the Federation, at which the subjects of foreign competition, grading and packing, land tenure and rating difficulties, railway grievances, and insect pests will be discussed. With this comprehensive list there should be a useful and profitable interchange of views.

NURSERYMEN AS INVENTORS

Amidst the brilliant display of flowers at the Royal Horticultural Society's show this week there were some exhibits which although not so ornamental, were of very interesting character. Mr. H. Becker, a well-known Jersey nurseryman and fruit grower, has invented a new system of glass roofs for greenhouses, which does away with the old-fashioned system of glazing. The use of putty is dispensed with in the glazing of roofs and frames. The supporting bars are of the ordinary shape, but without the usual rabbeting, the bars being grooved along the center, so as to carry off any water. No bedding material is needed for the glass, which overlaps in the ordinary manner, and is finally held in position by means of thin galvanized iron caps of the shape of an inverted trough, having a level flange on each side. The flanges are striped with a coat of thick oil-paint before being applied to the edges of the pane of glass, thereby creating a water-tight joint. Any pane can be quickly removed without disturbing the next by unscrewing the screws holding its separate piece of metal capping, which covers the wood from all outside influences. No skilled labor is required for the glazing, and for tomato growers particularly it affords a means of exposing without expense a "sick" border to the influence of the open air. Messrs. R. D. Whitmee & Sons, Birchwood Park Nurseries, Swanley, showed a wire arrangement for supporting carnations and other flowers, which has been found very useful in facilitating the cutting of large quantities of bloom

W. H. Adsett.

London, England, May 13, '05.

A Beautiful Montreal Estate

A CORNER OF THE GARDEN

IN THE CONSERVATORY

The conservatories and garden of Alfred Joyce, Outremont, Montreal, at all seasons are full of interest to plant and nature lovers. The situation is an ideal one, securing the setting and outlook with that privacy so desired by the busy city man. The greenhouses adjoining the residence are fine, light, well-ventilated spans of Lord & Burnham's construction. Melons planted out are a sturdy, promising lot of plants; Montreal Nutmeg, Countess, Beechwood and Hero of Lockinge, are a few of the varieties grown. The cool houses are full of healthy stock. One hundred and fifty varieties of zonal geraniums are kept, also chrysanthemums, tuberous begonias, gloxinias, cyclamens, Lorraine begonias, Nicotiana Sanderæ, Primula floribunda, and numerous other bright flowering subjects. Kalanchoe flammea with its bright scarlet heads of flowers, flowers freely if kept well up to the light and on the dry side. Martynia fragrans, a pretty gesneria-like plant is seen in various shades of color. Schizanthus Wisetoniensis is just past its best but has been magnificent. The new types produce a wealth of color which makes it one of the best of spring decorative plants.

Among other things worthy of note are the seedling amaryllises, anthuriums, Primula stellata (new type), fancy pelargoniums, Bignonia grandiflora and Streptosolon Jamesonii. Numbers of herbaceous perennials are potted up early and make a fine spring display. Specimen crabs, maples, and weeping silver birch stud the well-kept lawns. There are fine mixed borders in which are shrubs such as prunuses, spiræas, etc., with Lilium candidum and irises planted between and edged with double pink daisies.

On higher ground and in the center of garden is a piece of wild garden and rockery. In the rear of this on rising ground are three fine beds of herbaceous plants and flowering shrubs, set amid velvety lawns with here and there specimen abies and silver birch. Tree pæonies are mixed freely among flowering shurbs. This is perhaps the best, most up-to-date garden in the vicinity of Montreal. In the care of C. Craig, it shows excellent cultural merit. His efforts are well supported by Mr. Joyce, who not only takes an active interest in the work but gladly welcomes visitors to share with him his many treasures. This privilege is largely taken advantage of and is much appreciated by the flower-loving public; this spirit of generosity is twice blessed; both he that gives and they that take.

Edgar Elvin

Vandas in Chicago

[See Frontispiece]

The photograph herewith reproduced is from E. G. Uihlein of Chicago, who is the fortunate possessor of many interesting and rare orchids, some of them quite unique. The happy condition of the plants speaks volumes for the successful culture under such detrimental conditions prevalent during the winter in practically the heart of this city.

It is evident that the surroundings suit the culture of vandas, of which there are very fine examples of Vanda Sanderiana, V. Lowii, V. Denisoneana, V. Roxburghii, V. Kimballiana, V. cœrulea, V. gigantea, V. Cathcarti, V. cœrulescens, V. lamellata, V. Parishi var. Marriattiana, V. teres, V. Hookeriana; together with several specimens of V. suavis and V. tricolor in variety.

Four plants were selected for photographing. No. 1. On the extreme right is a plant of the true V. tricolor planilabris, one of the finest forms of tricolor, with blossoms of large size, rich in color which is yellow and deep bronze, the labellum being a rich rose and striped with bronzy purple. The spike has seven flowers. No. 2. Vanda tricolor, one spike,

six flowers; very rich in color. No. 3. Vanda tricolor, three spikes with twenty-four flowers. No. 4. Top plant, V. suavis. This plant has been in the collection several years; has four spikes, forty-seven flowers; pure white petals with magenta spots, labellum deep magenta-purple.

This genus has many interesting features, which should make them more extensively cultivated, even when out of flower; their long stems clothed with deep arching foliage feathered from the base to the summit are much admired. The late Erastus Corning of Albany, had a complete collection of these plants, also the late W. S. Kimball of Rochester, L. Merand of Albany, N. Y., and F. L. Ames of Boston. There is a fine collection of them at Greystone, N. Y., in the Untermyer collection, also in Mrs. G. B. Wilson's collection at Philadelphia.

A. Dimmock

Hardy Rhododendrons

The season of rhododendrons is on, and once more the note book is taken in hand and with it the task, so often essayed but never completed, of compiling a list of reliably hardy varieties. Appreciating the deep interest which all garden lovers take in this subject, we have asked several gentlemen, recognized as the best-informed authorities, to favor our readers with a list of about twenty sorts that have withstood the varying conditions of successive winters sufficiently to demonstrate their hardiness.

Professor C. S. Sargent, of the Arnold Arboretum writes as follows:

"The severe winter of 1903-1904 and the long and excessive drought of the autumn of 1904, followed by another severe winter, have proved disastrous to rhododendrons in eastern Massachusetts, and many plants that have been growing in the neighborhood of Boston for twenty-five or thirty years without protection and without injury have died since the first of January. A recent examination of the important collections of these plants in the neighborhood of Boston, shows that the following Catawbiense hybrids are generally in good condition and may therefore be considered able to resist nearly any of the weather conditions they are likely to have to endure here:

Album elegans, Album grandiflorum, Alexander Dancer, Caractacus, C. S. Sargent, Delicatissimum, Everestianum, H. W. Sargent, Henrietta Sargent, Kettledrum, King of the Purples, Lady Armstrong, Mrs. Millner, Mrs. C. S. Sargent, Purpureum elegans, and Roseum elegans."

Parsons & Sons Co., of Flushing, N. Y., sends the following list of varieties that have proved perfectly hardy in their nursery:

Daisy Rand, The Boss, General Grant, J. R. Trumpy, H. W. Sargent, Bicolor, Purpureum crispum, Atrosanguinea, Kissena, Mabel Parsons, Kettledrum, Abraham Lincoln, Grandiflorum, Chas. Dickens, Flushing, Everastianum, Henry Probasco, Dr. Torrey, Mrs. Millner, Chas. Bagley.

From T. D. Hatfield, gardener to Mr. Walter Hunnewell, Wellesley, Mass., comes the following interesting account of the experience of the past winter:

"Mr. Hunnewell has handed your query on rhododendrons to me to answer. Winter before last was severe, and we thought that it was about as good a test of hardiness as we should be likely to get for many years, but last winter was worse. In fact, we can hardly say that any rhododendrons are hardy, or to be exact, thoroughly hardy. All have been injured; even the invincible Everestianum has been badly cut up, and parts of some plants killed, above the snow line; quite a number of the half-hardy ones such as Lady Mosely, and Duchess of Connaught, have been killed outright. Maximum Wellesianum, which latter should by its breeding be hardy, has been severely injured; some plants, or parts of plants, are entirely dead, above the snow line.

Now another interesting question comes in with this past winter's season experience, and that is the effect of sun — direct sunlight. We had good reason, up to now, to believe that rhododendrons were most injured from what we called "burning," and this was worst in the most sheltered places. This fact, or these conditions remain; but some plants near the pond in the most exposed positions on the whole place, with the least care — not being in the rhododendron garden proper — have come through with practically no injury either this winter or last, and these are quite exposed to sunlight. But the bad effects of sunlight in this case, it seems to me, are nullified by the continual circulation of very cold air all the time. Again in another place, which seems to me ideal for rhododendrons, hardly any injury, or much less, was experienced. This is in a belt sheltered by hemlocks and pines from the mid-day sun.

We moved about one-fourth of our rhododendrons last September, many very large plants. Now we expected to lose some of these, but they have come out fully as well, and some varieties better than those of the same kind not moved.

If we should give you the names of twenty-five varieties as quite hardy, we would name the following, still we would much prefer to wait until after this season's blooming.

Twelve hardy. Mrs. C. S. Sargent, Album elegans, Alexander Dancer, Caractacus, Charles Dickens, Delicatissimum, H. W. Sargent, Lady Armstrong, Lady Clermont, Lady Frances Crossley, Mrs. Millner, Purpureum elegans, Roseum.

Twelve less hardy. Purpureum grandiflorum, Old Port, Mrs. Harry Ingersoll, Kettledrum, Album grandiflorum, F. L. Olmsted, George Paul, Guido, Henrietta Sargent, Lady Grey Egerton, Princess Victoria, Lee's Purple."

Kenneth Finlayson writes as follows:

On behalf of J. A. Petigrew, Superintendent of Parks, and in conformity to your request, I subjoin a list of twelve rhododendrons that stood last winter in the Boston park department with little or no injury.

Album elegans, Album grandiflorum, Delicatissimum, Everastianum, Hannibal, Charles Dickens, Mrs. Millner, Mrs. C. S. Sargent, Charles Bagley, Lady Armstrong, Caractacus, Henrietta Sargent.

South American Horticulture

RIO DE JANEIRO — II

Palm avenues, with intervening spaces of parks connect the suburbs, terminating in the valley, where Brazil's grand botanical garden — jardin botanico — is situated. It contains the most beautiful avenue on earth probably, a cross of gigantic Oreodoxa regia. The avenue is a good half a mile long in each wing, built up by several thousands of perfect majestic crowns towering each one two hundred feet above you. The time I visited it, there was a perfect summer morning sky, the light clouds tinted in all rainbow colors and once in a while a breeze was swinging the palm-blades enough to cause a rustling noise through the air, as if a big flock of birds were passing. I walked admiringly through the whole length of it twice and, when an old leaf dropped off and fell, I stopped to measure its length and weight. It was twenty-four feet long and I had to use both hands to lift it. There is a small stream running through the garden, forming a pond in the same, and floating leisurely to the bay, a rifle-shot distant. A walk to the pond leads through a lawn, along the border of which stand numerous four and five-feet high agaves of different species — a group which can be rivaled perhaps only in a few Italian parks. Of course then there are all the other tropical plants, collections of East Indian, Australian, and African palms, such as our conservatories contain, but here acclimatized and in all their native lavishness, size, and strength. Curious is a bamboo walk along the stream, on account of its coolness. This walk with the fifty to sixty feet long, overhanging, bamboo stems on one side, and the water on the other side, is almost as dark and as cool as the stream beneath, so completely are the sunrays shut out forever as long as the bamboo is left and taken care of. The tops of the bamboo are as thin as a little finger, but the lowest link between the first two notches will be found six to seven inches in diameter. This variety is the Bambusa latifolia, used throughout country towns in Brazil to make the street decorations on the numerous holidays. Two of the poles are simply planted in each street gutter opposite each other, the tops bent together and some bunches of green palm leaves and red dracæna blades tied around them, between which on a string hang flags and Chinese lanterns.

Little parrots and monkeys inhabit the trees of the botanical garden, the size of woodpeckers and squirrels and they act much like these. Past a group of tree-ferns you come to a walk, which leads you to the department of smaller plants and of tropical herbs, etc. You can see, for instance, here a vanilla vine climbing on a trunk of a forest tree, looking much like a stringy smooth cactus. Or you can go a few steps further to see a tree full of melons, Carica papaya botanically, a tree with feminine and masculine flowers on different trees, but the former has flowers and edible fruits in all stages and in all months of the year. You may look on aquatics or plants like the orchids living in the air and at terrestrial plants from all continents, but as soon as you pass out of the gates of the park into the street, you will not find a single weed or grass blade of northern vegetation on the adjoining pastures or fruitlands.

There are several parks in the city beside the Jardin botanico; their beds are full of Begonia rex or of caladiums and have elegant phœnix palms and cycas, etc., but a nearer description is not necessary for a general picture of South American horticulture. Many objects of Brazilian horticulture and floriculture might be shown yet — many unknown, but interesting features narrated and admired. When the young Republic has had a few more years of progress, who knows if the present fashion of traveling to the Mediterranean will not be succeeded by a fashion to travel to the far south. GERHARD BLEICKEN.

Wilfrid Wheeler

We present with much pleasure the portrait of the newly appointed chairman of the fruit committee of the Massachusetts Horticultural Society. We believe that the infusion of young, progressive blood will do much to stimulate interest and progress in this department of this influential society's work, and that the result will eventually be a quickened life and stimulus for the fruit interests of Massachusetts.

Agricultural development in sections more richly endowed by nature, fast freights and refrigerator cars, have in recent years changed the conditions under which fruit growing in New England may be profitably conducted, and the Wilder and Hovey era has gone forever. These men were great — great enough to adapt their work to the needs and the opportunities of their times. Were they young men of to-day we should expect them to work on the exigencies of to-day — not on the glorious memories of half-a-century ago. Such a man we believe Wilfrid Wheeler to be and this is why we congratulate the society.

Mr. Wheeler is 28 years of age. His theoretical training in horticulture consisted of five months in England and France, one year in Brown University, one year at the Bussey Institution and a course of lectures at Harvard. He has personally seen and tested over one hundred and fifty varieties of strawberries and has at the present time over fifty sorts under cultivation besides a wide range of varieties of all hardy fruits, at Concord, Mass.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

Every one should read President Eliot's address at Buffalo, which appears in this issue. The sentiments therein expressed and horticultural progress fit well together.

The story of the recent Paris exhibition as told in this issue rather excites our envy. Natural effectiveness in such a display can never be fully attained except by plunging the flower pots in the ground. Horticultural Hall, Boston, is adapted to this manner of exhibition, but it has been so used only once and then with grand effect.

The rhododendrons, noblest of all decorative shrubs, show the effects of the pitiless winter in denuded stems and blighted flower buds. Any variety that has come out of the fray unscathed this year, need never again have a question raised as to its hardiness. Some valuable lists will be found on another page of this issue.

The pæony next comes in to claim special attention. The present awakening to the merits of the herbaceous pæony merits the cordial encouragement of all garden lovers and is, we hope, but the beginning of an unprecedented popularizing of this useful border plant which combines richest colors, finest forms, luxuriant foliage, hardiness of constitution, and easiness of culture in a remarkable degree and has limitless possibilities as a florists' cut flower, as well.

And now the "Flower Sundays." Where is there a religion so pure as is silently taught in the persuasive perfume, form and color of the flowers? It is one of the most hopeful signs of our times that the churches are giving more attention to this form of Creator worship and less to dogmatic, intolerant theology. Florists can at this season afford to be generous.

> "For what is worth is anything
> But so much money as 'twill bring."

is a hard truth forced upon the florist for pretty close to 365 days in the year. Flower Sunday may well be made an exception. And, in the long run, sentiment will not be the only recompense.

Our exchange clippings indicate a very wide-spread interest in the window garden topic and general approval of the effort being made to encourage the brightening of the monotony of city streets, by the use of outside window boxes of growing plants. The effect of this philanthropic movement in the poorer districts is not alone to embellish the streets, but it tends to elevate the standard of the people living in these quarters and all possible encouragement should be given by florists, seedsmen, and others, not only because they are direct beneficiaries, but because it means progress toward greater civilization and refinement, better homes and better people.

A recent report from U. S. Consul Fisher at Formosa gives interesting details of Japanese agricultural undertakings in Texas which, if carried to completion will, undoubtedly, lead to a large immigration of Japanese into that region. The plan at the outset is to install about 1,000 farmers on a territory of about 50,000 acres, it being evident that farming is the main enterprise that can at present be profitably undertaken in America by the Japanese, that of growing vegetables being the most inviting. New York is two days, Chicago one and one-half days and San Francisco four days distant. The outcome of this experiment will be watched with interest by horticulturists, for Texas has long been looked upon as likely to prove a good field for the production of many of the plants and bulbs that American florists have heretofore imported from foreign sources. The Japanese, with their fondness for such things and their cleverness in horticultural pursuits, may yet do for us what our own people have lacked the courage to undertake.

The news of the failure of one of the Greek florists in New York with liabilities of $5,368 and "assets nothing," follows closely on our approving comment regarding the recent agitation among the wholesale trade in favor of a mutual understanding in the matter of credits and collections, and is another costly object-lesson on the workings of the prevalent loose methods in the flower trade. With the exception of its twin evil — the hoarding up of perishable stock in advance of a holiday — we are convinced, not alone on theory, but by hard experience, that there is no greater hindrance to the prosperity of all departments of the florists' business than this random credit-giving. Our esteemed New York contemporary kens in our advocacy of this reform something he doesn't like. We hasten to assure him that in this, as in all other movements which HORTICULTURE may urge or commend, our only actuating motive is the desire to help in the bettering of the craft, as is our duty, for

> "Words are things, and a small drop of ink,
> Falling like dew upon a thought, produces
> That which makes thousands, perhaps millions, think."

After Adjournment

And now we read of the "seedless watermelon." This is said to be a Missouri introduction, but we suspect the Englishmen will cut it open and investigate before purchasing this time. "Burnt child fire dredth, quoth Hendyng."

State entomologist J. B. Smith of New Jersey claims that the Newark brand of mosquitoes has been about exterminated by the work of the State commission and that the pests that still torment the Jerseyites are not natives, but come from Staten Island, and respectfully asks New York to keep them at home. We never expected it would come to this.

In these days of spraying for bad insects and syringing for good flowers, it will be worth your while to look up the Shipman kerosine steam pumping outfit advertised in this paper. Robert Montgomery who is one of the best growers on the Boston circuit has one, and says it is indispensable and John McFarland of North Easton, Mass., who also has one, says it is the best investment he ever made.

John Dunbar, writing to the *American Florist* from Rochester, N. Y., mentions Prunus Davidiana as "perfectly hardy." If it has proven so in Rochester, this is quite different from its record in Boston where, after a good trial at the Arnold Arboretum and elsewhere, it proved very unreliable, not only losing its bloom in the early spring freezes, but having the wood badly winter-killed. We wish it were possible to indorse Mr. Duncan's recommendation, for Prunus Davidiana is a gem where it does well.

Under the caption of "Stupendous Ignorance in High Places," editor John P. Brown, in the June issue of *Arboriculture* arraigns the officials in the Bureau of Forestry, U. S. Department of Agriculture, at Washington, for alleged ignorance regarding the identity of catalpa seed and willful obstruction to the work of the International Society of Arboriculture. "Large and influential seed dealers" are also indicted in the same article for distributing millions of bignonioides and hybrid catalpa seed under the name of catalpa speciosa, the incentive thereto being, as assumed, the high cost of collecting speciosa — $3.50 to $5 a pound — "while seed from low-growing inferior trees may be gathered for ten cents per pound."

The ever-vigilant police of New York City have discovered that window boxes on the outside of the window are unlawful and in many sections the floral adornments which had begun to add a bit of brightness to the dingy house-fronts have been ordered removed. There seems no good reason why boxes properly secured should be forbidden. The ordinance is as follows and it certainly does not appear to warrant interference with boxes so fastened.

Section 671 — It shall not be lawful for any person to place or keep on any window-sill, railing, or balcony, top of porch, or any other projection from any house or other building in the city of New York, any earthern flowerpots, wooden box, or other article or thing whatever for the cultivation or retention of flowers, shrubs, vines, or any other article or thing whatever, unless every such flower pot, box, or other article is securely and firmly fastened or protected by iron railings, so fastened as to render it impossible for any such pot, box, or other article to fall into the street, under a penalty of $10 for every offense, to be recovered in the manner now specified by law for the collection of fines imposed for the violation of ordinances of the corporation.

Adopted by the Board of Aldermen, March 9, 1897.

Approved by the Mayor, March 15, 1897.

PHILADELPHIA FACTS AND FANCIES

The fellow who can improve the roses at the bottom of the box will be "some pumpkins!" Another chance for Luther Burbank.

A celebration will be held at the bowling alleys of the club on the 12th inst. to mark the closing of the bowling tournament, in which six teams of club members have been contesting for the past six weeks.

A tragic accident happened at Broad and South Streets on Saturday night, William Joyce a well-known retired gardener being run over and killed by an automobile. Mr. Joyce was seventy-eight years of age and well known in the trade, having been for many years gardener at the old Baldwin mansion on Chestnut Street. He was a notable exhibitor at the shows of the Pennsylvania Horticultural Society in days gone by, and was greatly respected by all who knew him. The reckless drivers of the motor car were arrested. Resolutions were passed by the Florists' Club of which deceased was an honorary member.

Edwin Matthews of the Meehan Nurseries gave an interesting talk on the uses of hardy shrubs for forcing purposes at the monthly meeting of the Florists' Club on the 6th inst.

And now for June weddings. Awake, O north wind; and come thou south; blow upon my garden that the spices thereof may flow out. For the voice of the lawn mower is heard in the land, and the cheerful chug chug of the suburban train inviteth my beloved to come into my garden and eat of its pleasant fruits. The roses appear upon the earth; the time of the singing of birds is come; arise, my love, my fair one, and come away.

Solomon had nothing pessimistic about him. Job had his good points of course; but give me the cheerful Solomon every time.

Among our recent visitors were the genial J. F. Sullivan of Detroit and T. M. Ulam of Pittsburg. A departure from our town was noted on Thursday in the person of Alex. B. Scott, bound for Boston.

Conard and Jones exhibited two new hybrids of Rosa rugosa at last meeting of the Florists' Club which look promising. They were New Century, pink, and Sir Thomas Lipton, white. They also showed two new climbers, Ruby Queen and Pink Queen, hybrids of Mme. Degraw and Wichuraiana. All four very double. Mr. Wintzer has great hopes of them.

June 6th was ladies' day at the Gun Club grounds, Wissinoming. A large number of the members and their ladies attended. The latter did no shooting, but were generous with their applause. A planked shad dinner was a feature of the occasion.

G. C. WATSON.

Henry Reidel, an employé of Warendorff's and for many years connected with the New York retail florist trade, sustained a fracture of the skull by falling down the subway stairs at the 28th street station, on May 27, and is still confined to his bed from the effects of the fall.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

The first annual picnic of the Flower Markets of Boston was held on the grounds of Robert Montgomery in Natick, Saturday, June 3, 1905. It was largely attended by the growers of both markets, all of whom enjoyed themselves immensely. A large contingent left Boston on the 12.15 car from Park Square, arriving at the grounds shortly after one and were cordially greeted by Mr. Montgomery, who gave them the freedom of his place for the afternoon. After partaking of refreshments the ball-teams indulged in some preliminary practice until 2 o'clock when the game was started. It was a close game, fiercely contested throughout and was won in the tenth inning by the Music Hall team, Holden scoring the winning run with two men out. The score —

Innings	1	2	3	4	5	6	7	8	9	10	
Music Hall	3	0	3	2	2	0	0	0	1	2	—13
Park Street	4	4	0	0	0	1	2	0	1	0	—12

Individual totals

Music Hall Market — H. Capers, ss., 1; H. Ward, p., 4; F. Capers, 1b., 3; Matthews, 3b., 1; McFarland, c., 0; Rough, lf., 0; Elwood, cf., 2; Brophy, 2b, 1; *Holden, rf., 1.

Park St. Market — Fisher, p., 1; Evans, rf., 3; Harrigan, 2b., 2; McGinty, 3b., 2; Free, 1b., 2; Crowley, cf., 0; Edgar, c., 2; Grino, lf., 0; Stock, ss., 0.

*Comley substituted for Holden in first three innings.

Umpires: Cowell, C. Ahlgren, Montgomery.

For the Park St. team Fisher pitched a fair game and Edgar behind the bat was A-1. Free covered first in good shape while McGinty on third gathered in everything that came his way. The outfield was not particularly busy but took a chance at everything that happened along.

For the Music Hall team, Ward and McFarland made a battery to be proud of. Ward had good control of the ball and many opposing batsmen cut wide swathes in the air. McFarland caught a fine game. F. Capers at first and Brophy at second played their positions in good shape, while H. Capers at short took everything in reach. Comley, Holden, Rough and Elwood were It in their respective portions of the garden. The umpiring of Cowell was a source of satisfaction to all. Montgomery's decision on McFarland in the last of the ninth raised a storm of protests for McFarland was undoubtedly safe, but Music Hall gracefully bowed to the supreme decision of the umpire and fixed it up all right in the tenth.

Mr. and Mrs. Montgomery served ice cream and cake to the ladies and a hurdy gurdy furnished music for the dancers on the green.

Bernard A. McGinty, of the Park St. market, enters the wholesale commission business this fall. Mr. McGinty was with Welch Brothers for ten years and has been with Montrose Greenhouses for the past two years. He is a popular young man and deserves success.

THOS. F. MATTHEWS.

PERSONAL

Robert Dunn has resigned as foreman at the greenhouses of the P. R. Quinlan Company at Syracuse, N. Y., and will go into business on his own account.

Prof. L. O. Howard sailed from Boston, June 3, on the steamship *Romanic*, one of his objects abroad being the investigation of the matter of parasites available for checking the increase of the gypsy and brown-tail moths.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY

On Saturday and Sunday June 3 and 4, was held the annual rhododendron show of the Massachusetts Horticultural Society at Horticultural Hall, Boston. The display of rhododendrons was meager as compared with the usual exhibit made at this time, but the tardy season has kept the flowers back and but few were open. The exhibitors were Walter Hunnewell who staged three hundred trusses, not for competition, Mrs. J. L. Gardner, E. A. Clark, Blue Hill Nursery, and W. J. Clemson. From the Hunnewell estate came an enormous specimen of Rhododendron lucidum, ten feet high and ten feet in diameter, in a tub, for which a silver medal was awarded to T. D. Hatfield for superior cultivation.

Notwithstanding the paucity of the rhododendron entries the hall was well filled with a splendid promiscuous exhibition. There were hardy azaleas from Wm. Whitman, Mrs. J. L. Gardner, and T. C. Thurlow, German irises from William Whitman, hardy pyrethrums from Mrs. Gardner and W. J. Clemson, hardy herbaceous flowers from Blue Hill Nursery and W. J. Clemson, foliage and flowers of hardy ornamental trees and shrubs from E. A. Clark, Mrs. J. L. Gardner and Warren H. Heustis, tree pæonies from Mrs. J. L. Gardner and T. C. Thurlow. Ed. MacMulkin showed a very fine group of palms and decorative-foliaged plants, E. O. Orpet a vase of odontoglossum crispum and Mrs. E. M. Gill a bunch of big candytuft that even William Sim would doff his hat to.

A splendid show of flowering trees and shrubs was made by the Boston Park department for which a vote of thanks was recorded and a similar recognition was given R. & J. Farquhar & Co. for a display of herbaceous flowers.

J. E. Rothwell won a silver gilt medal for display of orchids arranged for effect, a first-class certificate of merit for Lælio-cattleya Lycedas (L. tenebrosa × C. Schroderæ), and honorable mention for Cypripedium Lamonteanum (C. calypso × C. Rothschildianum). E. O. Orpet received a first-class certificate of merit for seedling Lælia tenebrosa × L. purpurata. A cultural certificate was given to W. C. Rust, gardener to Dr. C. G. Weld, for two specimen plants of Calceolaria rugosa Golden Gem, of remarkable beauty. The usual showing of fine vegetables was made by J. C. Stone, A. E. Hartshorn, Ed. Parker, G. D. Moore, W. H. Heustis, W. Warburton, J. B. Shurtleff, Jr., and W. J. Clemson.

IMPORTANT

The annual pæony show of the Massachusetts Horticultural Society, scheduled for Saturday, June 10, has been postponed until June 17, on account of the backward season.

NEWPORT HORTICULTURAL SOCIETY

President Sullivan of the Newport Horticultural Society has appointed Paul Volquardson, Andrew J. Pow, and John P. Hammond, judges for the June exhibition.

An additional sum of $50 for special premiums has been received from Miss Fanny Foster, to be awarded for the best collection of outdoor-grown roses, all named varieties.

Excellent progress is being made with the preparations for the exhibitions; the premium schedules are in the hands of the printer and publisher for more than a week. That the printing and publication of these will be no ordinary task will be easily seen, when it is known that the schedules and advertisements comprise what will be a book 6½″ × 10″ of 76 pages, probably the largest book of the kind ever published in New England.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Preparations for the convention at Washington are being rapidly completed and progressive reports received from all departments indicate a wide-spread interest and the probability of a very large attendance on this occasion.

The opening session will be held at 2 P.M. on Tuesday, August 15, when the usual opening addresses and reports will be presented. The evening of that day will be devoted to the president's reception which will be a very enjoyable social affair. On the two following days the sessions will be in the forenoon and evening, the forenoon meetings being devoted to nominations, elections, discussions upon practical topics, etc., and the evening sessions to two lectures, one on "Work of the Bureau of Plant Industry, U. S. Department of Agriculture, in its Relation to Floriculture and Horticulture," by B. T. Galloway, Chief of Bureau, illustrated by stereopticon slides; the other on "Work of the Bureau of Plant Industry in Encouraging Civic Improvement and the Teaching of Horticulture in the Public Schools," by Miss Susan B. Sipe, illustrated by stereopticon slides.

Attention is called to the prizes offered by Treasurer Beatty, $25, $15, $10, for the first, second, and third best essays on "The Ideal Employer." These papers must be sent to the office of the secretary not later than July 15 without signature, but with the name of the writer accompanying same for the purpose of record, and should not exceed fifteen hundred words each.

Attention is also called to the offer of a silver medal for the best display of cut flowers to be shown in vases.

There will be a very comprehensive special exhibit by the U.S. Department of Agriculture.

The trade exhibition will be held in the National Rifles Armory, and the sessions of the Society in Carrol Hall, which adjoins that building. The exhibition will be under the management of Mr. George H. Cooke, Connecticut avenue and L street, Washington, D. C., and those wishing to secure space should make prompt application to that gentleman. Contrary to the custom heretofore, the exhibition hall will remain open throughout the day without interruption.

The bowling fraternity are actively preparing for an interesting tournament between the representatives of the various cities. Information regarding this feature can be had from Messrs. Phil. Hauswirth, Chicago, or John Westcott, Philadelphia.

Up to the present time reduced railroad rates on certificate plan have been granted by the Trunk Line, New England and Southeastern Passenger Associations, covering all the territory east of Buffalo and Pittsburg, and south and east of the Ohio and Mississippi Rivers, also all points in Canada east of and including Toronto. The Central and Western Passenger Associations, which control transportation west of the above mentioned territory, have not yet been heard from, but will undoubtedly grant a similar reduction, that is, one and one-third fare for the round trip, certificate plan.

Ask your State Vice-President, or the secretary of the nearest florist club for railroad rates and for information regarding excursions which are being arranged that will pass nearest to your home city.

Full details will appear in the preliminary program which will be sent out as usual early in July. The secretary will be glad to answer any inquiries regarding further particulars.

WM. J. STEWART, *Secretary*.
11 Hamilton Place, Boston.

BOTANICAL SOCIETY OF PENNSYLVANIA

Saturday afternoon and evening, June 3, was a red-letter date for the above society. In the afternoon visitors were shown over the grounds and through the conservatories of the Botanic Gardens of the University of Pennsylvania, and in the evening entertaining talks, illustrations, and exhibits, were given in Biological Hall adjoining the gardens. Dr. Miller, Professor Macfarlane, Dr. Harshberger, and other officers of the society were indefatigable in their efforts to provide instruction and entertainment for the troops of visitors.

Dr. Robert Huey spoke on "The natural history of our cultivated roses," a subject on which he is entirely at home. "The likes and dislikes of Poison Ivy," was the topic selected by Miss Laura Woodward, while Mr. H. Stone gave a talk on "The Orchids of our State." Other interesting features on the programme were "Bees in relation to Flowers," by Dr. Phillips; "The preservation of our native wild flowers," by Miss Simons; "Mushrooms edible and otherwise," by Mr. Walmsly.

A display of pæony and iris blooms was staged by Henry A. Dreer and attracted much attention. Dr. L. Rosa Minoka, a young Indian physician exhibited drugs of the native Indians; Mrs. Ladd, water-color drawings and herbarium specimens; Miss Heick and Miss Jones, an excellent exhibit of microscopic objects; while many other interesting exhibits were being made in other sections of the building. Altogether this event, which was officially known as a "Scientific Assembly," proved a great success, and the funds of the Botanic Garden were the better for the many half-dollars surrendered by the visitors for tickets; while the latter certainly got their money's worth and something more. Less than half of the speakers and features of the programme have been mentioned in this condensed report.

G. C. WATSON.

AMERICAN PÆONY SOCIETY

The premium list for the second annual meeting of the American Pæony Society to be held in the Auditorium Hotel, Chicago, on June 16 and 17, has been issued. The list of prizes is as follows:

COMMERCIAL CLASSES — DOUBLE

1. Largest and best collection of varieties, one flower each, first prize, $15; second, $10; third, $5.
2. Collection of best twelve and most distinct varieties, six flowers each, first prize, $10; second, $5.
3. Best collection of varieties in various shades of rose pink, not less than three nor more than six flowers each, first prize, $10; second, $5.
4. Best collection of varieties salmon and flesh-colored, not less than three nor more than six flowers each, first prize, $10; second, $5.
5. Best collection of white varieties, not less than three nor more than six flowers each, first prize, $10; second, $5.
6. Best collection of varieties, cream white and light yellow, not less than three nor more than six flowers each, first prize, $10; second, $5.
7. Best collection of crimson varieties, without stamens, not less than three nor more than six flowers each, first prize, $10; second, $5.
8. Best collection of crimson varieties, with stamens, not less than three nor more than six flowers each, first, $10; second, $5.
9. Best collection of tricolor varieties, in-

cluding flowers with guard petals, collarette and center petals of different colors, not less than three nor more than six flowers each, first prize, $10; second $5.

10. Best twelve specimen varieties, twelve blooms of each variety, first, $25 silver cup donated by *Country Life in America;* second, $10.
11. Best one hundred blooms Festiva Maxima, first prize, $10; second, $5.
12. Best one hundred blooms pink, any shade, first prize, $10; second, $5.
13. Best one hundred blooms crimson, first prize, $10; second, $5.

COMMERCIAL CLASSES SINGLE

14. Best collection of Japanese varieties, including so-called Imperial varieties, first prize, $10; second, $5.
15. Best collection of single varieties, first prize, $10; second, $5.

AMATEUR CLASSES

Open to amateurs and private growers only.

A. Best collection of not less than twelve varieties, one bloom of each variety, first prize, $10; second, $5.
B. Best and largest collection of pure white varieties, one bloom of each variety. first prize, $10; second, $5.
C. Best collection of rose pink varieties, one bloom of each variety, first prize, $10; second, $5.
D. Best collection of salmon and flesh pink varieties, one bloom of each variety, first prize, $10; second, $5.
E. Best collection of tricolored varieties, one bloom of each variety, first prize, $10; second, $5.
F. Best collection of crimson varieties, one bloom of each variety, first prize, $10; second, $5.
G. Best collection of cream and yellow varieties, with or without markings, one bloom of each variety, first prize,$10; second, $5.
H. Best collection of twelve or more single varieties, first prize, $10; second, $5.

The officers of the society are as follows:

President, C. W. Ward, Queens, N. Y.; vice-president, Guy A. Bryant, Princeton, Ill.; treasurer, J. H. Humphreys, Germantown, Pa.; secretary, A. H. Fewkes, Newton Highlands, Mass.

Committee on Nomenclature: John Craig, Horticultural Department, Cornell University, Ithaca, N. Y., Chairman, C. J. Maloy (Ellwanger & Barry), Rochester, N. Y., John A. Charlton, Rochester, N. Y., J. F. Rosenfield, West Point, Neb., A. H. Fewkes, Newton Highlands, Mass.

Manager of Exhibition: J. B. Deamud, 51 and 53 Wabash Ave., Chicago, Ill.

The committee on nomenclature announce the receipt in 1904 of the following named collections for the purpose of planting, and subsequent comparison for verification of names.

EUROPEAN PÆONIES RECEIVED IN 1904

	Varieties contributed
A. Dessert, Chenonceaux, France	200
DeGraff Bros., Leyden, Holland	124
Croux et Fils, Chatenay, (Seine), France. Received April, 1905	76
L. Paillet, Chatenay, (Seine), France. and 75 vars. grafted.	94
L. van Leeuwen & Son, Sassenheim, Holland	43
Peter Barr, 12 and 13 King st., Covent Garden, London, E.	21

AMERICAN PÆONIES RECEIVED IN 1904

Cottage Gardens, Queens, N. Y.	235
Peterson Nursery, Chicago, Ill. and 5 no label	120
John Charlton & Sons, Rochester, N.Y. and 6 numbered	97
Ellwanger & Barry, Rochester, N. Y..	58
Andorra Nurseries, Philadelphia, Pa. 4 numbered, 38 rec'd in 1903	57
W. & T. Smith Co., Geneva, N. Y.	56
J. F. Rosenfield, West Point, Neb. 4 numbered	41
Storrs & Harrison, Painesville, O.	40
Jackson & Perkins Co., Newark, N. Y. 3 numbered	37
A. H. Fewkes, Newton Highlands, Mass.	36

Signed on behalf of this Committee,
JOHN CRAIG, *Chairman.*

DECORATIONS AT BANQUET TO MESSRS. WEBER AND MILLER, ST. LOUIS

(See issue of June 3)

KANSAS CITY FLOWER SHOW

The preliminary program for this notable annual event has been issued and copies may be had on application to Louis W. Shouse, secretary, Convention Hall, Kansas City, Mo. The date of the show will be November 13 to 18.

This exhibition while primarily an enterprise of the Convention Hall Building Company, has the support and coöperation of the local florists of whom a committee of three act as advisory board. This affair is managed in quite a different way from the methods in other cities. Everything is conducted on a very extensive scale and the business end of it is looked after by men who know nothing about flowers but do know something about how to entertain the public and carry on the work because it will be a good thing for the town. The total amount of premiums at present, amount to nearly $5,000 and several classes are yet to be provided for.

HORTICULTURE would like to see this enterprise reap a rich reward for it is no small benefit to American horticulture generally, and we also hope that some of our eastern growers of exhibition flowers will be represented there by exhibits commensurate with the occasion, and the liberal inducements offered.

The New York Florist Club bowlers have begun their practice games, the first of the series having been rolled last Friday evening. As the team to represent New York at the Washington convention is to be selected according to the averages made at these practice games, the following scores recorded at the first attempt will no doubt interest many of our readers:

Shaw	127	157	136	110
Kessler	120	133	121	140
Traendly	105	142	108	100
Guttmann	151	178	164	175
Ford	119	149	135	138
Lang	150	155	185	

NEW JERSEY FLORICULTURAL SOCIETY

The regular monthly meeting of this Society was held in its rooms in Orange, on June 2. The occasion was made a special "ladies' night" and to the usual floral display was added this pleasant social feature. The evening was varied by a musical and dramatic entertainment and light refreshments. Photographs of the exhibits receiving the highest marks for the last five months covered one side of the room. The exhibits for the evening consisted of orchids, Cattleyas Mendelii, Mossiæ and gigas with Cœlogyne Dayana, the necklace orchid, from the collection of Henry Graves, grown by Edwin Thomas. Phalænopsis grandiflora, Lælia elegans, Cyp. Lawrencianum and Cattleyas gigas and Mossiæ from the collection of Wm. Barr, grown by Arthur Bodwell. A collection of cut orchid blooms from Julius Roehrs, of white C. Mossiæ Reineckiana, D. atroviolacum and hybrid Lælia purpurata beautifully illustrating the value of these flowers in decoration. Two vases of enormous Papaver orientalis, grown by Peter Duff. Gloxinias from William Runkle, grown by D. Kindsgrab. A vase of mixed aquilegias, pyrethums from the Colgates', grown by William Read. Pæonies from Stewart Hartshorne, grown by A. Caparn. Papaver and Japanese iris from George Merck, grown by Max Schneider. Pandanus Veitchii and Rhapis humilis, grown by D. Kindsgrab. Arthur Bodwell's Nicotiana Sanderæ were the first which have been shown in this vicinity and a white of this same variety, one out of forty plants, is the first so far published. The judges were Joseph A. Manda, Arthur Caparn, and James Goodyear.

JOSEPH B. DAVIS.

TARRYTOWN HORTICULTURAL SOCIETY

The May meeting of the above society, held on Tuesday, May 30, being the annual ladies' night, only necessary business was transacted. One honorary member and three new active members were elected and two names proposed for membership. The occasion was graced by a large attendance

of the fair sex. A good musical program was gone through and refreshments consisting of ice cream, cake, etc., served. All agreed that it was a very enjoyable evening. The exhibits consisted mostly of cut flowers of hardy shrubs and herbaceous plants.

The June exhibition of roses, strawberries, hardy flowers, etc., will be held in the Young Men's Lyceum on the afternoon and evening of June 13. Schedules for this and also for the fall show may be had from the secretary, E. W. Neubrand. WM. SCOTT, *Cor. Sec'y.*

NOTES

The second international botanical congress meets at Vienna, June 11–18.

The summer meeting of the Missouri State Horticultural Society occurs on June 13–15.

The next exhibition of the Horticultural Society of New York, is scheduled for June 14 and 15 at the New York Botanical Garden.

The rose show of the North Shore Horticultural Society will be held at the Town Hall, Manchester, Mass., on Thursday, June 29. A good schedule of prizes is offered.

The Annandale Rose Show, held in connection with the commencement of St. Stephen's College, one of the most interesting events of the year for the flower lovers of the upper Hudson River, will be held on Wednesday and Thursday, June 14 and 15.

On Monday evening, June 12, will occur the great event — Ladies' Night — for which the New York Florists' Club has been making preparations on a scale of unusual magnificence. A fine exhibition of pæonies is expected to supplement in a feeble way the galaxy of beauty which is sure to be there to feast upon President Traendly's smile and Chief Steward Nugent's strawberries.

OBITUARY

Mrs. C. Leslie Reynolds, wife of the well-known assistant to Superintendant W. R. Smith at the Botanic Garden, Washington, D. C., died last week after a long and painful illness.

W. S. Davis of the firm of A. B. Davis & Son, Purcellville, Va., died suddenly on May 24, at the age of 38 years. As a carnation grower he had established intimate relations with the trade in general, enjoying their respect and confidence, and his untimely taking away brings sadness to many. He was a member of the S. A. F.

Without a moment's warning the dean of the Pacific Coast wholesale trade died this week, and you can report for HORTICULTURE that it is the sense of the entire trade that no better man ever lived or died in California than our decedent brother workman, Michael Lynch of Menlo Park. He was sixty years of age, hale, hearty and active to the last, but while at work in one of his greenhouses, cutting stock for shipment, a paralytic stroke took him from our midst instantly. Michael Lynch was with us here in the coast trade during half his life, and prosperity never deserted him. So large-hearted and affable was he, every body loved him, and at the funeral services, the largest seen in San Mateo County in years, there was a general out-pouring of our San Francisco and outside tradespeople, and hosts of other sorrowing friends. Some of the floral pieces sent in were elaborately rich, and beyond accounting, so numerous were they. Among the In memoriam tributes I remember these trade contributors: Frank Pelicano Company; Cox Seed Company; John H. Sievers Co.; J. C. Vaughan; Evans Company, Salt Lake; Martin & Forbes, Portland, and the Seattle, Washington florists. LUTHER MONNETTE.

THE INTERNATIONAL FLOWER SHOW AT PARIS

The horticultural exhibition which opened at Paris on May 20, for nine days, was a notable one. As far as the quality and quantity of the exhibits was concerned, and financially also, to judge from the large attendance of the public, the show was a great success. It was held in a series of large glass houses, all connected, on the north bank of the river Seine.

The grounds between the entrance gates and the exhibition buildings were tastefully laid out with large beds and shrubs, trained fruit trees, ferns, and hardy plants.

The first of the glass houses contained the orchids which, however, were not so fine as we are accustomed to see at our own exhibitions in London. The Phalænopsis anabilis, however, were an exception. They were finely in flower for the second time in six months. They flowered in December last, their best season of blooming, and again in the month of May they were in full blossom. The beautiful white flowers were most freely produced, one plant bearing a raceme of 24 flowers. In December last it produced 26, so that in six months it had produced 50 flowers. These we were told fetched one shilling each. Mr. Regnier, the exhibitor, is said to make £400 a year from the cut blooms alone.

Ornamental stove plants, such as palms, anthuriums, crotons, dracænas, etc., were finely shown and the various groups of them served to relieve the almost too brilliant color effect produced by the masses of richly colored flowers. All the exhibits were in the form of flower beds; the plants were in pots, and the latter were plunged beneath the soil so that to all appearances the plants were growing where they stood. The larger building resembled a garden, gay with flowers. In fact the whole exhibition was in effect a flower garden, but replete with brilliant color effects impossible to obtain out-of-doors as gardening is ordinarily practised.

Cannas, tuberous begonias, Japanese irises, roses, azaleas, pæonies, pelargoniums, and many other plants filled separate beds, and while each made an admirable exhibit in itself, they were so arranged as to produce a most striking general effect. The Ghent azaleas and rhododendrons alone filled a large building; they were planted in large clumps and masses and made a miniature forest of shrub and flower.

One of the finest features of the exhibition was the display of floral decorations. In this direction the Parisian artists perhaps are not excelled. The huge vases, baskets, and épergnes were filled with lilac, hydrangeas, roses, lilies, and other flowers, and although freely arranged and a wealth of material used, there were no heavy effects.

The Parisian does his decorations with a light hand and the result is seen in the graceful displays produced. The German floral decorations, which were extensively shown, were poor in comparison. The general effect to the onlooker was one of heaviness and unpleasing color associations. Beds filled with annual flowers were a sight worth going far to see; they were literally ablaze with color.

Vegetables too were a good feature. Messrs. Vilmorin, the famous French seed growers and nurserymen, had a wonderful exhibit of vegetables, some eight hundred varieties being shown altogether in an exhibit more than one hundred yards long. The salads, which figure so largely in the French menu, were represented by many plants that an Englishman would never dream to be edible.

H. H. THOMAS.

BEAUTY AND DEMOCRACY

The following is an abstract from the address of President Charles W. Eliot delivered at the dedication of the Albright Art Gallery at Buffalo on May 31.

"The ultimate object of democracy is to increase the satisfaction and joys of life for the great mass of the people — to increase them absolutely and also relatively to pains and sorrows. In other words, the final aim of government by the people for the people is to increase to the highest possible degree, and for the greatest possible number of persons, the pleasurable sensations, or cheerful feelings, which contribute to make life happy, and to reduce to the lowest terms the preventable evils which go to make life miserable.

"Among the means of increasing innocent, pleasurable sensations and emotions for multitudes of men and women, none is more potent than the cultivation of the sense of beauty. Beauty means a thing enjoyable. It must always be something which excites in human beings pleasurable sensations and emotions. Beauty is infinitely various, and it is omnipresent. It is accessible, therefore, to all men in all places and in all moods, and its infinite value for pleasure and content only waits on the development of the capacity in human beings to feel and to appreciate it.

"The oldest and readiest means of cultivating the sense of beauty is habitual observation of the heavens, for which the only things needed are the open sight of the sky and the observing eye. The heavens are always declaring 'the glory of God.' The noblest poetry of all nations celebrates the majesty and splendor of the sky. Psalmist, prophet, and artist draw thence their loftiest teachings. Sun, moon, and stars, sunset and sunrise, clouds tossed and torn by wind, floating or driving mists and fogs, snow, rain and the clear blue are all phenomena of the sky, which will afford endless delights to him who watches them. The dweller on the prairie or the sea has the best chance at the sky, and the dweller in narrow streets, hemmed in by tall buildings, has the worst. This obstruction of the sight of the sky is one of the grave evils which beset a modern urban population.

"City people run about at the bottom of deep ditches, and often can only see a narrow strip of the heavens. Fortunately the loftiest structures reared by men are not so high but that a moderate open area in the midst of a closely-built city will give a prospect of large sections of the heavens. This is one of the great things gained for an urban population by accessible open spaces, such as parks, commons, marshes, and reaches or ponds of water.

"Next to observation of the sky as means of developing the sense of beauty comes observation of the landscape. Landscape includes innumerable and very various objects of beauty; for it includes beauty of form, of texture, of color, and of luster.

"Over every landscape hangs the sky, contributing lights and shadows, brilliancy or somberness, perfect calm or boisterous windiness. The ear shares with the eye the beautiful effects of weather on landscape. The rushing of the storm through the narrow valley, the murmuring tremor of the pines in the gentle breeze, the rustling and bowing of a field of corn in an August gale, the clatter of palmettoes in a wind, the rattle of pebbles on a beach dragged down by the retiring wave, the onset of a thunder shower are delights for the ear as well as the eye. For such implanting and developing of the sense of beauty in the minds of urban populations a large new provision has been made by many American cities during the past twenty years.

"Another means of increasing the enjoyment of beauty which has of late years be-

come commoner in our country than it used to be is the cultivation of flowers and flowering shrubs in houses or house lots, and in gardens, both public and private. This cultivation is a very humane and civilizing source of enjoyment. It is usually a pleasure shared with others, and it is as enjoyable on the small scale as on the large for the individual planter and tender. One of the encouraging signs about American systematic education is that school boards and teachers are beginning to see the utility of school gardens. 'How Plants Grow' was the title of one of Asa Gray's best books. The place to teach that subject is not the lecture room, or the laboratory, but the garden plot.

"It is said that the first art a barbarous people develops and fosters effectively is architecture. Shelter is a primary necessity; so the earliest arts and trades will provide shelters. For the worship of their gods all peoples try to rear imposing structures. The American people, if we study them all across the continent, seem to mean that their best buildings shall be schoolhouses and libraries — certainly not a bad choice. They are also ready to pay for costly buildings for the use of government — national, state, or municipal — each citizen having some sense of individual proprietorship in such buildings. If we could always get in our public buildings the beauty of good proportion and of pleasing decoration, what an addition to the every-day enjoyment of the population would such good architecture give.

"To pass a noble building every day in going from the home to the work shop makes an appreciable addition to the satisfaction of the citizen. To go to school in a house well designed and well decorated gives a pleasure to the pupils which is an important part of their training. To live in a pretty cottage surrounded by a pleasing garden is a great privilege for the country-bred child. The boy who was brought up in a New England farmhouse, overhung by stately elms, approached through an avenue of maples or limes, and having a dooryard hedged about with lilacs, will carry that fair picture in his mind through a long exile, and in his old age revisit it with delight. In regard to public buildings, however, it is all-important that they should be not only noble in design, but also nobly used and occupied.

"The provision of public museums like this beautiful structure whose opening we commemorate to-day is another means of educating the popular sense of beauty. By casts, prints, etchings, and photographs a good collection trains the eyes of the people to appreciate beauty of outline, of light and shade, of symmetry and proportion. Vases and textile fabrics supply instruction in color, luster and texture. For training the eye to the appreciation of beautiful compositions in color, good paintings are necessary. Examples of the work of the greatest masters in color are, of course, very difficult to obtain for exhibition in the United States; but a few such objects in our best collections would have an immeasurable value. Unfortunately our barbarous legislation, taxing imported works of art, piles on the natural difficulties of our situation a serious artificial obstruction.

"The best place to inculcate the love of the beautiful is the schoolroom. To the rising generation the most effective lessons can be given, and from the school millions of children will carry the lessons to millions of homes. After reading, spelling, writing, and ciphering with small numbers and in simple operations, drawing should be the most important common-school subject. All children should learn how lines straight and curved and lights and shades form pictures and may be made to express symmetry and beauty. All children should acquire by use of pencil and brush power of observation and exactness in copying, and should learn through their own work what the elements of beauty are.

"It is monstrous that the common school should give much time to compound numbers, bank discount, and stenography, and little time to drawing. It is monstrous that the school which prepares for college should give four or five hours a week for two years to Greek, and no time at all to drawing. The main object in every school should be, not to provide the children with means of earning a livelihood, but to show them how to live a happy and worthy life, inspired by ideals which exalt and dignify both labor and leisure. To see beauty and to love it is to possess large securities for such a life.

"When, therefore, the citizens of Buffalo assemble in this beautiful park to dedicate this beautiful building and its collections to the public service, they are commending to the rest of the nation a high example of private beneficence which will promote, in a wise and sound way, democratic happiness."

NEWS NOTES

Paul R. Burtt of Lowell, Mass., while boarding an electric car on Sunday was thrown to the ground by a passing wagon and sustained severe injuries.

Men fumigating the greenhouses of Pennock Sharpless, at Concordville, Pa., on May 26, set fire to them and the buildings were completely destroyed, entailing a loss of $10,000.

A blaze which promised to be serious started in the store of F. L. Knapper, corner of Fifth street and Fairmount avenue, Philadelphia, but was at last conquered with the aid of a neighbor and a hand extinguisher.

Burlington, Vt., is soon to come into possession of a handsome park through the generosity of Hon. W. J. Van Patten, a former mayor. The track includes the famous Indian Rock and the Ethan Allen farm, thus giving it historic interest.

President and Mrs. Roosevelt's annual Memorial Day tribute to the memory of President McKinley was a wreath of pink and white roses, three feet in diameter. It was received by Mrs. McKinley on Monday and placed on the coffin of the President in the afternoon.

Bishop Leonard of Cleveland, it is said, has raised his voice against elaborate floral decorations for weddings in the chancel of Trinity Cathedral, as they detract from the solemnity of the occasion. Hereafter florists must confine their efforts to the aisles and walls.

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

T. W. Wood and wife sailed for a Mediterranean cruise from New York, on Saturday, July 3.

Too much rain in the west, and too little in the east, seems to about describe present conditions.

The results of experiments at the Maine Experiment Station during the past year, show that the yield of tomatoes is increased by fully one-third by trimming the plants after part of the fruit is set.

Owing to a shortage in the present crop, corn and beans are temporarily exempted from import duties in Costa Rica. The exemption went into effect May 1, and is to continue until December 31 of the present year.

While it is too early to venture any opinion as to the bean crop in the east, the condition of the pea crop is causing growers some anxiety. Conditions of these and other crops will be reported in these columns from time to time.

The latest reports from California show that conditions are going from bad to worse with the onion seed, and a very short crop will undoubtedly be harvested. With a short crop of onions and onion seed, and the consequent high prices, onion seed should be in active demand next season and at much higher prices than for several years. Favors large or small, thankfully received.

All eyes in the seed trade are now turned towards Alexandria Bay, which will be the Mecca for the faithful this season. This is one of nature's "Beauty Spots" and all who attend the convention of the American Seed Trade Association, which is to be held there this year, June 20 to 22, may be assured of a delightful, restful time, and will carry pleasant memories of the occasion for many years to come.

A liberal programme of entertainments has been arranged by that prince of good fellows, W. H. Grenell. 'Nough said.

Mr. Chas. Loechner of New York has just returned from a trip abroad on the Dampfer Kaiser Wilhelm II.

Here we have a snapshot at the Rickards Brothers, W. C. Rickards, Jr., whose sunny temperament has illumined the front half of Thorburn's seed store during business hours for "lo, these many years" and his brother Alfred J., in the act of entertaining their friends with a song, as is their custom when a well-earned holiday comes and all business is forgotten in the flow of sociability and comradeship. There are some other boys in the seed trade who *think* they can sing, but the Rickards Bros. dispense the real article.

Strike Scenes in Chicago

The wholesale cut flower shipping business has been conducted under difficulties since the great teamsters' strike went into effect. The two illustrations herewith show how the teaming was conducted. The first shows the accumulation one hour before train time on Sunday, May 28. Several such lots were handled, the estimated value of the packages in sight being $5,000. The other view shows the wagons ready to start for the station half an hour before train time. Many of the representative wholesale men are seen in this picture.

Over six thousand shipments have been handled since the inauguration of the strike on April 27. The service, under the able management of F. Lautenschlager, HORTICULTURE'S Chicago representative, has been so satisfactory that the shippers and receivers assert it is far superior in efficiency and promptness to the former express service. Express company officials also speak highly of the management and say that there have been less losses than under ordinary service.

We are indebted to the Gibson Art Galleries for the use of the photographs.

FRED LAUTENSCHLAGER

Manager of Transportation for Chicago Wholesale Florists' Asso. during the strike. Represents HORTICULTURE in Chicago.

The florists' meeting at Louisville, Ky., which was to be held June 6, will be held June 13, instead, at William Walker's store, and the attendance should be large as many things of importance will come up. There are several new members.

Cut-Flower Market Reports

BOSTON Business is badly broken in this market, and values are demoralized on many lines. Special grades of roses are not easily procured, most of the bloom from plants that have flowered through the winter being now fagged out. The best roses today are Carnot and Kaiserin. Carnations are down in quality and price. Pæonies are now coming in, and in a few days will be abundant. Trade is dull generally with the wholesalers and retailers alike.

BUFFALO Reports from florists state that the Decoration Day's business was satisfactory to all. Stock seemed to be a little scarce at times, due undoubtedly to the cold weather. Tulips were about over with, while pæonies were not seen, as in former years. Lilacs, valley and deutzia could be obtained in quantities.

The latter part of the week stock has been more plentiful, and there was ready sale for good carnations, roses, lilies and peas. Some of the finest Liberty, Maids, Carnots and Kaiserin, which are grown a short distance from Buffalo are snapped up quickly, at good prices. The demand for Beauties is also fair. The outlook for June is good, decorations and graduations being in order.

CHICAGO An unusually strong demand in all lines was well maintained the entire week. Carnations were the strong feature, the demand sufficient to command steady prices. The tendency of prices while upward did not reach the holiday values of the previous week. There was much business done in pæonies; values on Festiva maxima averaged $1. to $1.25 per dozen. The ordinary sorts being in heavy supply, prices rule uncertain. American Beauties, especially the choice grades, are above the requirements. Teas are moving well under a plentiful supply; Liberties move readily and command quoted prices. The choicest lilies of the season are now offered. Sweet peas are holding values wonderfully for so late in the season; outdoor stock is promised shortly. An abundance of perennial cut-flower stock is on sale, as pyrethrum, iris, campanulas, poppies, only to be out-numbered by oceans of home-grown pæonies, the single sorts dragging.

The week commencing June 5 was marked by an enormous expansion in receipts, and values have considerably decreased. All the market is thrown out of plumb.

CINCINNATI Since last report business in all lines has greatly improved. All the growers and retail stores report trade as very good for Decoration Day. Inside stock such as roses, lilies, and carnations were scarce and good prices were realized. Pæonies and other out-door flowers were more in evidence but sold readily. As usual on Decoration Day we had the customary heavy rain storms, but these held off until about 4 o'clock in the afternoon, thereby giving all the florists ample time to sell out all the left over stock. Several of the store men have large orders booked for weddings, commencements, etc., for this month, but are having their troubles in getting the material to fill them.

INDIANAPOLIS Notwithstanding the fact that outside flowers were to be had in great abundance and variety, Memorial Day trade was unusually brisk in plants as well as cut flowers. Good prices were realized, both wholesale and retail. Pæonies and carnations were in most demand but anything in the way of a flower was sold.

LOUISVILLE The previous week business conditions had been very good; however, Decoration Day did not cause this, as there were

PREMIUM LIST NOW READY.

Address: LOUIS W. SHOUSE, Sec'y., Convention Hall, KANSAS CITY, MO.

but few orders, none of them amounting to very much. Carnations of medium quality find a good demand, but the supply is not quite adequate. Good quantities of roses are obtainable and sell well, the quality being good. The demand for pæonies is not quite so heavy, but they are excellent in quality.

MONTREAL Business in the stores has been largely confined to the supply of bedding stock, for which there has been a more than usually strong demand. There is promise of an early clean-up in many cases. The custom of renovating the graves in the cemeteries, notably on Victoria day by the people, gave a good early start to the trade. Large rustic stands and window boxes have also been in demand. Lonicera reticulata aurea, lophospermums and German ivy coming in useful for this work. In cut flowers, out-door-grown lily of the valley has been in some little time and though its season is short, its arrival is a welcome one. Roses, with the exception of Beauties, are hardly up to the usually high standard, but there is a general looking forward to a ready sale during this month of weddings and roses. Outside plants everywhere are putting on growth with great rapidity. Fruit trees are literally loaded with bloom and with immunity from any late frost, promise heavy crops in the fall.

NEW YORK A congested condition prevails at present in the cut-flower market with regard to pæonies and other out-door material as well as roses, carnations, etc. Prime American Beauty, Bride, Bridesmaid and moss roses, and lavender and white sweet peas are selling at best figures, but there is a great mass of material on which very little can be realized. General trade conditions are dull, and it is only the June weddings that cause any demand and prevent the market from dropping into complete stagnation.

PHILADELPHIA Roses went off in pretty good shape past week; quality fell off considerably, but volume kept up except during a couple of cool days. Beauties, Liberties, Brides, Bridesmaids, and Kaiserins are the principals. Carnations have been off since Decoration Day, quality and price both having suffered. Pæonies are abundant, particularly pink. Red and white are not so plentiful. These are in good demand for June weddings. Sweet peas and lily of the valley normal, and fine quality. Dendrobium Jamesianum has made its appearance in small quantity.

PROVIDENCE Decoration Day business was very good, going ahead of former years with some. Pots and earthern pans of geraniums, etc., were more generally used for cemetery lots. There was a good supply of most everything in cut flowers, white stock predominating.

PURE CULTURE MUSHROOM SPAWN

Being the Eastern Distributing Agents for the American Manufacturers of PURE CULTURE SPAWN, we can ship Fresh Spawn on short notice at the following prices: 15 cts. per lb.; $1.25 per 10 lbs.; $10.00 per 100 lbs. Information as to Special Culture on application.

We have also the best make of English Virgin Mushroom Spawn, fresh importation, 8c. per lb.; 75c. per 10 lbs.; $6.00 per 100 lbs.; $55.00 per 1000 lbs.

Good bedding stock is somewhat scarce here. We find a better demand for bedding and herbaceous stock each year.

SAN FRANCISCO As a flower traffic day in San Francisco this year's 30th of May lined up fully abreast of the best Memorial Day flower-sale record ever before scored. And within the last preceding six years there have been at least two of these seasons when San Francisco florists reported sales as something enormous.

Naturally then the good outcome yield in last week's Memorial Day flower business should anyhow be sufficient to produce a trade atmosphere of buoyancy that would not perish in a week. But, nevertheless, it has perished, and at this writing, only a half week after Memorial Day, all buoyancy of spirits in trade circles is lost from sight and very perceptible is the prevailing shadow, owing to the death of Michael Lynch of Menlo Park, an account of which appears in the obituary column.

THE PIERSON-SEFTON CO.

Horticultural Architects and Builders
West Side Ave., JERSEY CITY, N. J.

Exterior view of "U" Bar greenhouses designed and erected for Mrs. O. Thorne, Milbrook, N. Y.

We Manufacture and Erect Every Type of Greenhouse

THE GALVANIZED "U" BAR TYPE
THE FLAT IRON RAFTER TYPE
THE SASH BAR TYPE

We make each type in several styles. We also furnish any of the constructions in the ridge and furrow type in any width of span.

"PIERSON" BOILERS

For Steam and Water

have more direct fire surface than any other horticultural boiler on the market, and this together with ample flue surface and area is the reason for the economical results obtained.

We will be pleased to tell you more fully as to their merits and also to send you letters of testimonials from those who have used them.

WE ALSO MANUFACTURE

Self-locking vent-opening apparatus, both the standard and self-oiling type. Wood and iron frame benches and tables. Hot bed sash and frames. Special hand made greenhouse putty.

ESTIMATES FURNISHED FOR COMPLETE STRUCTURES OR MATERIAL READY TO ERECT.

Are You Going.... **To Build?**

I am interested in a glass factory in Jersey. I want to hear from you before placing your order for glass. I think I can put you in the way of saving some money. State quantity, quality, and size wanted. *NOT IN THE TRUST.*

Address:
George C. Watson
1614 LUDLOW STREET Philadelphia, Penn.

☞ Remember this factory is NOT in the TRUST and has a free foot.

Oncidium sphacelatum

Our frontispiece illustrates a batch of Oncidium sphacelatum as grown in the collection of Mrs. B. B. Tuttle of Naugatuck, Ct. The group contains twelve plants which carry over one hundred and fifty spikes of bloom, each spike having from one hundred to two hundred flowers. While the flowers of this species are comparatively small, the quantity in which they are produced more than makes up for this, and it deserves to be more generally grown, the long, graceful, arching spikes of golden yellow showing to good advantage in decorations.

The grower of these plants gives the following cultural directions: With me they usually flower during April and May and, by keeping them cool and dry, the flowers are held in good condition during the biggest part of June, a season when other oncidiums are not so plentiful. Another point in their favor is their good behavior under cultivation. I know of no plant that will stand as much abuse and still give fairly good results, as this oncidium.

The plants shown in the group have been on the premises over fourteen years, and have been subjected to almost any kind of treatment until there was not a live root left in the pots. There were some fifty or sixty other orchids which went through the same treatment, but the oncidium mentioned above came out best of the lot; next came Cœlogene cristata, Cypripedium insigne and a few other things. Suffice it to say that the plants were in very poor condition when I took hold of them three years ago. I repotted them at the first opportunity, using as a compost good sound osmunda fiber, fibrous loam and pieces of dried cow manure as picked up in the pasture, in about equal parts. After the plants had taken hold in the compost, water was given freely overhead and at the roots. When the new growths are from five to seven inches high I start to use liquid cow-manure, or any form of manure water about once a week to start with, then after a month or so they will take it twice and three times a week until the new pseudobulbs reach maturity. Then water in any form is gradually withheld until the flower spikes are well up; from that time on, until the flowers open, the plants are watered overhead daily except in cloudy weather, at the same time giving them all the heat possible. If kept too cold at this period the spikes will produce only a few flowers on top and a few small branches at intervals which will hug the stem instead of standing out at right angles as they ought to do. When the flowers are well out the plants will enjoy a little rest by withholding water and keeping them cool. When the new growths, which will soon follow after the flowers are gone, are a few inches long, the heat and amount of water should be increased and both used freely as the growth advances.

My plants are growing in the warmest place I have, where the night temperature in winter is from 58° to 62°, and in summer from 62° to 70° according to the weather. Air is given whenever possible and as the house has ground glass, no shading is used until about the last week in May, this being removed again the latter part of September. These orchids will grow under any condition, but to have them good they want good care, that is to say plenty light and fresh air, plenty to drink and eat when growing and lots of heat and moisture as the flower-spikes develop, then a short rest and, last but not least, good drainage when potting.

M. J. Pope

The Rhododendron Question

I was very much interested in your notes on hardy rhododendrons, and agree with Mr. Hatfield who says no rhododendrons are thoroughly hardy. Speaking of the English and Belgian varieties, it is a fact some are hardier than others, and among the hardiest some will stand all right with Tom and will die with Jack; it all depends on the situation where they are planted, and an ideal spot for rhododendrons is seldom to be found in landscape-gardening. Shelter, shade, and dampness; and when those three factors cannot be found together, and one wants to grow rhododendrons, he has to find out all sorts of artificial tricks to succeed. That is what we had to do.

We have at present about 800 feet by an average of 20 of rhododendron borders, all a mass of flower, by the hundred on some bushes, and the foliage as healthy as can be, nearly all English varieties. Our plants are all big, imported ones, and we used to have every year the trouble everybody has; in the winter of 1899–1900, we lost nearly all our best varieties. We used to build high storm fences on north and west side; east and south were shaded. The soil was covered with a big layer of leaves, with no result. There was a large expense every year to replace the dead ones and an unsightly mass of burned plants in the spring when they ought to be a show.

After trying everything we came to the conclusion a radical step should be taken. The last of November we lift all our plants and dig where they stood, trenches three feet deep, ten feet wide, and as long as required. All the plants are heeled at the bottom of the trench in as nearly as possible a horizontal position, then packed and covered with leaves with a little hay on top to prevent their blowing away.

The projecting branches are kept down with pieces of board and a little storm fence is built on the north side. There are over one thousand plants of all sizes handled that way. We have done this for three years and have never lost one plant of the tenderest varieties. In lifting the plants every year we find that we have good, healthy balls of fine feeding roots, short, regular growth, with more flower buds, and in replanting in the spring it is easy to give new and more space if needed, and assort them anew.

You may say, Mr. Editor, that this is too much work; but it is work that pays well. With this way of protection, rhododendrons can be successfully grown in any place, either the most exposed or in full sun if thoroughly watered during dry season. In good sheltered places some will stand the winter undisturbed if well-shaded during winter by natural or artificial means, and the soil is covered with a good layer of turf. Among the hardiest that suffered the least during all our experience are all the Flushing hybrids with maximum and Catawbiense; these require little shelter. In the English varieties are Mme. Carvalho, Boule de Neige, Candidissima, Mrs. John Clutton and maximum Wellesianum, white; Everestianum, Bluebell and Wauban, blush and rosy lilac; Picturatum, Hannibal, James Nesmyth and Scipio, pink; Blandianum, James Bateman, Henrietta Sargent, James McIntosh, Lady Armstrong, Maxwell T. Masters, Mrs. C. S. Sargent, Mirandum and Norma, red; Atrosanguineum, Bacchus, Charles Dickens, C. S. Sargent, H. H. Hunnewell, T. W. Godman, Kettledrum, Mrs. Millner and Mrs. Shuttleworth, dark red; Mrs. H. Ingersoll, King of Purples, and Silvio, lilac and purple; Caractacus, Guido, Hamlet, Old Port, Ralph Sanders, Sephton and Sir Thomas Sebright, dark purple and crimson.

Stamford, Conn.

Calceolaria rugosa

In writing of those useful plants my memory is carried back to apprenticeship days, when they were so much in vogue for bedding-out purposes. I can recall the splendid effects they produced in beds of self-colors, appropriately edged with material that blended suitably with such colors. Sometimes the self-yellows were edged with the dark maroon varieties and vice versa. The situation best calculated to sustain their vitality and therefore their floral display is a moist and partially shaded position, such as tuberous begonias like to revel in. Splendid results were not wanting in the full, open sunshine, although they are somewhat bulkier in such positions, especially if the soil was light and inclined to be sandy.

My purpose, however, at this time in dealing with the above is less of the reminiscent, and more of the practical, every-day conditions, as applied to our own times and geographical environments. While they are not to be considered as being amenable to our hot climatic conditions as bedding subjects, they are, on the other hand, easily handled, to take rank with our most useful plants for greenhouse or conservatory decoration, and none is more likely to please in this direction than the variety C. rugosa Golden Gem. Its tiny, clear deep-canary-yellow flowers are exceedingly charming. In a shaded, cool position it remains in perfection for an incredibly long time, few flowering subjects being comparable with it in this regard, excepting the orchid itself. Their culture is very simple, requiring a cool and somewhat moist temperature to grow them well and free from greenfly, and as near to the glass as can be had.

The general *modus operandi*, as practised by the largest number of cultivators, is starting cutting, as stout as procurable, any time in August, the earlier the better; inserting the same in an equal quantity of leafmould and clean, sharp sand, well mixed, in pots or pans to suit the notions of each respective operator. I personally found the 5-inch pot as good a receptacle as any. Cold frames are the best place to strick them in at that season of the year, and should be heavily shaded with removable shades during hot, sunny days; they can be thus kept close with little or no air. Frequent gentle sprayings are very essential on warm and bright days; the woodwork of the frame should be more copiously syringed. Excessive moisture, however, in the frame must be diligently guarded against, and should any be manifest, airing must be attended to. Cuttings carefully attended to as above will take root in a comparatively short time; given the proper after care, a single such cutting will produce an elegant plant by June of the following year, suitable for a 7- or 8-inch pot. The former size and sizes I found the most serviceable for dwelling-house decoration.

It is customary to keep the plants after flowering, long enough to procure the cuttings for the ensuing year and then dump the old stock-plants out, the idea being prevalent through long usage that they are at their journey's end. The happy thought of my successor in planting a few of those old stock-plants out and lifting them again in the fall has demonstrated otherwise, and shows to what development this calceolaria can attain under such mode of treatment. Those who were lucky enough to see two of the specimens of plants that were treated thus, shown at our late rhododendron show, will concur with me, I think, in estimating them as grand.

Let us tell those that have not seen them — for that is our purpose — what huge specimens they were, over two and one-half feet in diameter and finely flowered. This, we hope, may stimulate a spirit of emulation; as for those who did see them, there could not be a better stimulating agency than the plants themselves.

Lobelia tennior

Foreign horticultural journals have of late years devoted much space to a lobelia, which has been presented under the name of Lobelia tennior and of which many glowing articles have been written. After an example furnished by Mr. Charles Bruggeman, florist at Villebrauch-Sur-Mer, Alpes-Maritimes, the colored plate of the plant, with its beautiful cobalt flowers, has been shown in the *Revue Horticole*. To people who are acquainted with herbaceous plants and have followed the evolutions of culture, Lobelia tennior is an old acquaintance under another name. In reality, Lobelia tennior was introduced into cultivation about half a century ago under the name of Lobelia ramosa, being first introduced in England in the year 1835, from whence it was carried to France. The colored plate referred to was reproduced from the Vilmorin Album, published in 1851. The sample in the Herbarium Gaillard and those at the Herbarium Verlat were collected in 1860 at the Cultures of Vilmorin, Andrieux & Co., at Verrieres, where at the time already existed a dwarf variety, since lost. This lobelia has not ceased to be in cultivation in France since its introduction. It has produced the dwarf varieties with blue, white, and rose-colored flowers, which were cultivated and mentioned in the catalogues of Vilmorin as varieties of Lobelia ramosa. In England it seemed to have disappeared from general culture and to have been re-introduced during the last few years, taking the name Lobelia tennior after the laws of the correct nomenclature; while in France the name Lobelia ramosa still remained in use. During this time a plant has received honors from the illustrated botanical journals under the name of Lobelia heterophilla and which has been classified by the London Horticultural Society under the name of Lobelia coronopifolia, Linn. which has large blue gentiana flowers and was easily confounded with the other. It is possible that this later introduction in England may prove the same as the variety long cultivated in France, which may have been modified by the influences of cultivation, as the English state that it has a trailing habit, while the French variety has an erect, compact stand. It is certain that the two plants do not differ from each other as varieties of the same species. However, the English type may have been introduced previously from Australia, its native home.

It seems that this Lobelia tennior has not been so well appreciated in France for its merits as a bedding plant. It has been judged a novelty for the reason that it has been so little known by the public. There is no doubt in our minds that this lobelia has a grand future before it as a bedding plant. From the seed which I secured from Mr. Lemoine of Nancy, I have several hundred plants now ready to plant out. The plant attains the height of one foot and makes a grand effect. R. & J. Farquhar & Co., of Boston, are the only introducers this year of this very beautiful and useful lobelia, which will be more fully described by lovers of bedding plants and will receive all due merits during the present season.

J. F. Rowe.

Rose Diseases

1. ANTHRACNOSE. (GLŒOSPORIUM ROSÆ)

Anthracnose causes the leaves to drop off. They turn yellow, especially those on the tips of the canes. The fungus runs throughout the entire plant, interfering with its functions to such an extent that it is killed. The fungus is similar to the Glœosporium on the raspberry and is probably identical. The plant is generally attacked when young, the spores gaining entrance through the surface of tender canes and leaves, germinating on the surface. The characteristics are pimply spots, evenly distributed, of a pinkish color, and made up of a myriad of spores.

Treatment. Spray with Bordeaux mixture or Ammoniacal Carbonate of Copper. Cut and burn diseased portions.

2. LEAF SPOT OF THE ROSE. (CERCOSPORA ROSÆCOLA)

As a rule this disease attacks plants out-of-doors only, but it may get into the house. It has the same external characters as black-spot, but is caused by a different fungus. It appears at first as black or reddish black spots (the red being at the edges), and the whole sprinkled with a white powder — the spores. The mycelium runs inside the leaves.

Treatment. Cut back severely all diseased parts and burn. Harrow ground and give plenty of light and air.

3. BLACK SPOT. (ACTINONEMA ROSÆ)

On out-door plants the black-spot occurs in spring or summer, on in-door ones at most any time. Small spots appear at first, gradually increasing in size until one-half inch in diameter. These spots are roundish, irregular black places, fringed at the edges, and often bounded with yellow. Later in the season the spots grow light-colored and dry, and finally reappear on the lower side. All roses are subject to the black spot, particularly the moss roses, and especially if planted in the open ground. In the fall affected leaves turn yellow first, characteristic leaves having a brown base and a yellow tip. These fall prematurely.

Treatment. Burn affected leaves, as the fungus lives over winter on these, and spray with some fungicide before the bush starts growing.

4. ROSE RUST. (PHRAGMIDIUM MUCRONATUM)

This disease appears on out-door plants early in summer. It attacks leaves, stems, and petioles. The leaves become twisted and distorted from the mycelium which runs among the tissues. This mycelium breaks through the epidermis in spots, through which the spores are disseminated. The spots vary in size and shape, but are of a uniform lemon-yellow color. These spots produce summer spores, the color being due to the vast numbers of spores that are present. Later the same spots produce brick-red spores, which survive the fall. On the lower side of the leaf hair-like tufts appear, which are the winter spores.

Treatment. Burn affected branches as soon as the disease appears, doing it early enough to prevent the spots from breaking, if possible. Burn all dead leaves in the fall. Spray in early spring before the plant starts growing, with a solution of Copper Sulphate and Carbonate of Copper.

R. L. Adams.

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The terrible menace of the voracious moths which have already ruined so much woodland in eastern Massachusetts demands that earnest study and effort should not be spared in any direction which promises relief. The report by Prof. C. S. Sargent, on another page of this paper concerning the success in combatting the pests with arsenical sprays, will be good news for many of our readers.

It has been observed by those who have handled pæonies cut before the flower had expanded and allowed to open in water or in cold storage, that, although the bloom can be depended on to expand, it will produce a flower much inferior in size and symmetry to those allowed to develop fully on the plant. This is unfortunate for the florist, as the cost of packing and shipping full-blown pæonies is out of all proportion to their market value.

In many cases the unusual spectacle is seen in gardens, this season, of rhododendrons well furnished with perfect heads of bloom, but completely denuded of foliage. The early, rather dry, and uniformly cold fall of 1904 may be, in a considerable degree, responsible for this peculiarity, the buds having gone through the winter in a very small state and well provided with close covering. There is an old and well-grounded belief that the the plants are weakened if allowed to flower under these conditions, but this is not accepted as sound by some modern gardeners whose opinions are accorded great weight.

The abandonment of the work of extermination of the gypsy moth by the State of Massachusetts five years ago was unwise, to say the least. The present horrible condition existing in the State's woodlands and on neighboring property presents overwhelming testimony to the folly and incapacity of the legislature of 1900, when it gave up the fight and withdrew its support from the Board of Agriculture, after a million dollars had been spent and final extermination of the pest was in sight. Abuses there may have been and perhaps extravagance, but this was not a sufficient justification for the sacrifice of all the results of previous effort and the cessation of all restrictive work.

There seems to be a generally prevalent impression that, while spraying with arsenical poisons is efficacious, the best method of dealing with the brown-tail moth is with the pruning shears when the trees are bare of leaves. If it were possible to see and remove every nest this might be all right, although more expensive. But one trip through the infested districts of the Middlesex Fells at the present time would quickly show why this nest clipping can never be a success alone, for there are to be seen vast numbers of winter nests on the scrub and other oaks which retain their foliage all through the winter, thus completely hiding the nests until late in the spring when the caterpillars are already abroad in quest of food. One big advantage of the spraying process is that it does double duty, killing both brown-tail and gypsy moths at the same application. And there are myriads of other leaf-eaters of lesser notoriety that are liable to have their career cut short likewise.

The columns of HORTICULTURE, in every issue, bear testimony to unprecedented activity in club and society work. The horticultural profession, all over the country, seems to have awakened to the great advantage of coöperative effort and the benefits, general and specific, that come from organized association. Within the next few days no less than four national organizations hold conventions — the Nurserymens', Seedsmen's, and Park Superintendents' Associations, and the Pæony Society. The Wholesale Seedsmen's League also holds forth in New York this week. Clubs and societies having monthly or weekly sessions show pronounced activity on all sides. There is no question of the duty a man owes to himself and to whatever branch of industry he may follow, to unite with the organization devoted to the interests of his avocation, and it is unquestionably true that whatever unselfish labor he may perform for the common good will eventually conduce to his own individual welfare. To generous coöperation, joint sympathy, and free interchange of experience we owe all the advancement we have made from haphazard cultural and trade methods towards scientific, rational, and productive exactness. The man who holds aloof from these elevating agencies not only loses the direct benefits that come from contact with his fellows but forfeits the consciousness of having done what he could to help towards the general good.

What They Say of Us

"The love of praise, howe'er concealed by art
Reigns more or less, and glows in every heart."

We appreciate your magazine very much. — B. B. Co.

All sold out. Cancel ad. and send bill. J. E. FELTHOUSEN, Schenectady, N. Y.

Kindly discontinue our advertisement after the issue of this week; we are entirely sold out of Wellesley plants. — WABAN ROSE CONSERVATORIES.

I am very much pleased with the paper. I think it fills a real need among horticultural publications and I hope it will be a permanent success. — S. A. E.

Enclosed please find $1 for my subscription. I am very much pleased with HORTICULTURE as it is always full of interesting articles. May success be always with it. — A. F.

N. CAMBRIDGE, MASS., *May* 31, 1905.
Gentlemen: — Please take my ad. out of HORTICULTURE. Lilies are all sold.
BOCK, *the Florist.*
2394 Massachusetts ave.

I am all sold out of stock as advertised, so will say that the two insertions will be sufficient at present. Yours,
J. W. HOWARD.
SOMERVILLE, MASS.

Thanks to HORTICULTURE, we are daily receiving orders and inquiries from all over the country, as well as from Canada, Porto Rico, and Cuba, which goes far to prove the value of HORTICULTURE as an advertising medium. We are very pleased with the results of our advertising in HORTICULTURE, and wish every success to the paper and editor. Respectfully,
A. LEUTHY & CO.
JUNE 12, 1905.

PHILADELPHIA FACTS AND FANCIES

Ring the joy bells. Walter Yates is the latest. We have been wondering, these past three weeks, what kept him away from the bowling tournament. He will reside on his return from the honeymoon at 4244 Devon street, Mt. Airy. Next door to him is the home of our legal luminary, D. C. Donoghue. Beyond that is the residence of a Baptist minister. I hope Walter may need the services of the latter a great deal oftener than that of the former, and we think the world of Mr. Donoghue, too!

Louis J. Reuter, late of Westerly, R. I., is the latest to join the ranks of the craft in the Quaker City. He has rented Sam Bunting's place at 58th and Elmwood avenues. Roses will be his main crop, only three of the houses being devoted to carnations. We bid him welcome among us and wish him the best of luck.

Assignee John Burton has called a meeting of those interested in the Craig matter for June 15th, when it is understood that if Mr. Craig has succeeded in his expectations, a release will be ordered and the property transferred from the assignee to the new company as soon as the legal formalities can be complied with. This call is in accordance with a resolution passed at last meeting of creditors, May 15th.

The descendants of John Bartram held their annual meeting and reunion at Bartram's Gardens, June 10th.

Personal

W. S. Lee and family of New York, arrived at Hamburg on the *Pretoria*, May 26.

Alfred Dimmock of Sander & Sons, London, is booked to sail for home on the *Lucania*, on Saturday, June 17.

Jos. Foerster of Chicago, manager of George Reinberg's wholesale store, was married June 8, to Miss Myrtle M. Riggs.

Visitors in New York City during the past week included William O'Connor and wife, Providence, R. I., Mr. Miller, Dallas, Texas.

William Hughes of Detroit, Mich., is now in the employ of J. A. Budlong, Chicago, filling the position formerly held by Mons Olson.

Charles H. Johnson, florist at the Vermont Experiment station, was married at Plattsburg, to Miss Winnifred G. Johnson, on June 7.

Joseph Fenrich and Miss Mollie Le Moult, daughter of Adolph LeMoult of New York, were married at Tremont on Thursday, June 8.

George M. Stumpp, wife and daughter, and J. M. Keller, wife and daughters, sailed on S. S. *Friedrich der Grosse*, on Thursday, June 15.

President Neubeck of the Buffalo Florists' Club, who has been sick, is reported as improving, and may be seen soon at his accustomed post.

Paul Kaese and wife, son-in-law and daughter of William Hagemann, New York, sailed for London on the *Kaiser Wilhelm der Grosse*, on Tuesday, June 6.

George B. Nash of the New York Botanical Garden, will make another exploring trip to Hayti, starting from New York on July 5, and carrying tents and complete outfit for a ten weeks stay in the mountains.

"Uncle Dick" Richards, the venerable rosarian of Brookline, Mass., observed the ninety-fourth anniversary of his birth, on June 10. The old gentleman has failed in health considerably during the past year.

THE DAWN OF THE NEWPORT SEASON

It cannot be said that so far the business horizon is over-bright, but several of the elements that will form this year's Newport sun are new, vigorous, and ambitious, and the desire of the newer elements to outshine the old may be the means of a more abundant harvest.

Newport florists are not entirely discouraged at the announcement that the British squadron would not put in here as was expected. Several of the newcomers have indicated their intention of entertaining lavishly, and several other old-timers, who for several years have been absent, are this summer to occupy their houses.

In the greenhouses of Mr. L. Beekman there are some splendid specimens of Nephrolepis elegantissima. From what can be learned from the grower of the plants in question, and from others in Newport, this variety is not a whit more difficult of cultivation than other varieties, while in rapidity of growth it equals any of them.

Killarney roses have been planted extensively in several places in Newport this spring.

After Adjournment

The destruction by fire of the big Exposition Building at Milwaukee where was held the S. A. F. convention of 1903, reminds us that at least three buildings so used by the S. A. F. have been burnt down, Philadelphia and Asheville being the other two. Possibly there are others.

B. B. Chandler tells us that he has received a number of appreciative inquiries from greenhouse owners who are glad to know that the Chandler glazing points are on the market again. Mr. Chandler has made improvements so that the old inconvenience of rights and lefts is neutralized. See his advertisement.

The question agitating the correspondents of one of our English contemporaries, "Are commercial travelers a nuisance?" is as funny as some of the inquiries that slip into the "question box" at club meetings. The topic has amusing possibilities and should make a prolific subject for the "bemasked scribbler." To lampoon openly these amiable and enterprising traveling representatives in this country would call for a display of rare courage. May their tribe increase!

Among the awards at the great Temple Show in London we are pleased to see that beautiful production of our Massachusetts rosarian, M. H. Walsh's Lady Gay, honored with an award of merit. "It is quite one of the best things among climbing roses" was the judges' comment. A fine illustration of this rose is given in the *Gardeners' Chronicle* for June 3. Two other American varieties that received favorable mention were The Farquhar and Debutante, the first one of Jackson Dawson's seedlings and the latter one of M. H. Walsh's.

The *Journal of Horticulture*, London, draws from the overcrowded "Situations Wanted" columns of the horticultural papers that too many gardeners are being trained in England and attributes the over-supply possibly to the substitution of the bothy system for the old apprentice system. We have been accustomed to regard the British trained gardener as a man well drilled in the fundamentals of gardening craft and it has been common to compare our rapidly fledged native gardener with the English brand much to the disadvantage of the former, hence we are interested and somewhat surprised to read in the *Journal of Horticulture* that in Great Britain "Many gardeners are made by a process of mere drift. That is to say, a country lad with no particular horticultural aspirations gets a job in a gentlemen's garden simply as a means of employment. He jogs on for a time until he gets too big to be called a boy, and then the vacancy comes for a journeyman in the bothy, which he duly fills, and eventually helps to swell the already overcrowded ranks of gardeners. It is quite likely that many youths who are made gardeners in this way would have been just as content to remain as laborers, and in some cases they would be just as well off. By the growth of the bothy system there is a tendency to employ young men as under gardeners who perform work that could be equally as well done by laborers, and the latter would never be competitors for headships, as the former are sure to be."

We don't have bothies here, but otherwise the process of gardener making across the water and on this side seems to be about "as alike as two peas."

NEWS OF THE CLUBS AND SOCIETIES

NEWPORT HORTICULTURAL SOCIETY

The prize schedule for the June exhibition is as follows:

CLASS 1. Gateway decoration arranged to show one side of a gateway in a space of 12×8 feet, coniferous plants excluded: 1st, Silver Cup, value $50, offered by Miss Alice Keteltas; 2d, $25; 3d, $15.

CLASS 2. Group of palms and foliage plants tastefully arranged to cover a space of 100 sq. ft.: 1st, $25, offered by Mr. A. G. Vanderbilt; 2d, $15; 3d, $10.

CLASS 3. Groups of palms, ferns, and flowering plants to cover a space of 100 sq. ft.: 1st, $25, offered by Mr. Wm. Watts Sherman.

CLASS 4. Table of decorative foliage plants. Table to be 3×9 ft. 1st, Silver Cup offered by Mrs. Perry Belmont; 2d, $15; 3d, $10.

CLASS 5. Display of orchids, plants, 1st, $10; 2d, $5.

CLASS 6. Specimen areca, 1st, $3; 2d, $2; 3d, $1.

CLASS 7. Specimen kentia, 1st, $3; 2d, $2; 3d, $1.

CLASS 8. Specimen any other species palm, 1st, $3; 2d, $2; 3d, $1.

CLASS 9. Specimen fern, 1st, $5; 2d, $3; 3d, $2.

CLASS 10. Collection of outdoor grown roses, named varieties, exhibited by private gardeners of Newport. Premiums offered by Miss Fanny Foster, 1st, $25; 2d, $15; 3d, $10.

CLASS 11. Display of outdoor roses tastefully arranged on a table 6×3 ft., 1st, $15; 2d, $10; 3d, $5.

CLASS 12. Fancy basket of roses and rose foliage, 1st, $8; 2d, $5; 3d, $3.

CLASS 13. Vase 25 American Beauty roses, 1st, $7; 2d, $5; 3d, $3.

CLASS 14. 12 H. P. roses, 12 varieties, 1st, $3; 2d, $2; 3d, $1.

CLASS 15. 12 H. P. roses, 6 varieties, 1st, $3; 2d, $2; 3d, $1.

CLASS 16. 12 H. P. roses, 1 variety, red, 1st, $3; 2d, $2; 3d $1.

CLASS 17. 12 H. P. roses, 1 variety, pink, 1st, $3; 2d, $2; 3d, $1.

CLASS 18. 12 H. P. roses, 1 variety, white or blush white, 1st, $3; 2d, $2; 3d, $1.

CLASS 19. 12 H. P. roses, any varieties, 1st, $3; 2d, $2; 3d, $1.

CLASS 20. 25 H. T. or tea scented roses, 1st, $5; 2d, $3; 3d, $2.

CLASS 21. Basket of roses, open to gardeners' assistants only, 1st, $5; 2d, $2; 3d, $1.

CLASS 22. 25 gardenia blooms, premiums offered by Mr. T. G. Owen, 1st, $5; 2d, $3; 3d, $2.

CLASS 23. Collection of herbaceous blooms, named varieties, 1st, $5; 2d, $3; 3d, $2.

CLASS 24. Bunch black grapes, 1st, $4; 2d, $2; 3d, $1.

CLASS 25. Bunch white grapes, 1st, $4; 2d, $2; 3d, $1.

CLASS 26. 6 nectarines, 1st, $3; 2d, $2; 3d, $1.

CLASS 27. 6 peaches, 1st, $3; 2d, $2; 3d, $1.

CLASS 28. 12 tomatoes, 1st, $2; 2d, $1.

CLASS 29. Strawberries, Gandy, 25 berries, 1st, $2; 2d, $1.

CLASS 30. Strawberries, Marshall, 25 berries, 1st, $2; 2d, $1.

CLASS 31. Strawberries, Nic Ohmer, 25 berries, 1st, $2; 2d, $1.

CLASS 32. Strawberries, Brandywine, 25 berries, 1st, $2; 2d, $1.

CLASS 33. Strawberries, Sharpless, 25 berries, 1st, $2; 2d, $1.

CLASS 34. Strawberries, Collection of not less than four varieties, 25 berries of each variety, 1st, $5; 2d, $3.

CLASS 35. 2 cucumbers, 1st, $1; 2d, 50 cents.

CLASS 36. Collection of vegetables, 1st, $10; 2d, $7; 3d, $5.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The Central Passenger Association, which controls the territory east of and including Chicago and St. Louis, has authorized a rate of one and one-third fare on certificate plan, in coöperation with rate announced by Trunk Line Association, for persons attending the S. A. F. convention at Washington, D. C., August 15–18, 1905.

DEPARTMENT OF PLANT REGISTRATION

The Conard & Jones Company, West Grove, Pa., submit for registration Rose American Pillar. Described as a plant of climbing habit; growth most vigorous; foliage very large and glossy; flower, clear, rosy pink, single, three inches in diameter, produced in enormous clusters and great abundance; very durable and fragrant.

Also, Rose Birdie Blye. Helene × Bon Silene. Described as an ever-blooming climber, producing clusters of blooms during the whole growing season; flowers, large, very double; color, beautiful rosy carmine and of delightful fragrance.

WM. J. STEWART, *Secretary.*

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS

The preliminary program of the eighth annual convention to be held at Buffalo, N. Y., on June 28, 29, 30, 1905, has been arranged as follows:

WEDNESDAY, JUNE 28

10 A. M. Business meeting at the Historical Building, Delaware Park.

1 P. M. Luncheon at Buffet in Park.

2 P. M. Drive about the Park System. (Evening — pleasure, or discussion at hotel, as desired.)

THURSDAY, JUNE 29

9.30 A. M. Train to Niagara Falls. Drive through the State Reservation under the guidance of Mr. Perry, the Superintendent.

2 P. M. Transfer to Canadian side and visit Queen Victoria Park under the guidance of Mr. Wilson, the Superintendent.

4 P. M. Trolley ride down and up the rapids and return to Buffalo.

FRIDAY, JUNE 30

9 A. M. Trip to Botanical Gardens under direction of Mr. Cowell, and afternoon for sight-seeing or pleasure.

SATURDAY, JUNE 31

Train at 8.30 A. M., to Rochester and visit the parks of that city. (To be arranged for, if desired, at Convention.)

PENNSYLVANIA HORTICULTURAL SOCIETY

Rose Day at Horticultural Hall brought out a fair amount of exhibits from the nearby gentlemen's places. Wm. Robertson, gardener to Jno. W. Pepper, took first for six blooms each in the hybrid remontant class, Jno. McLeary, gardener for Mrs. R. J. C. Walker, second, and Wm. Kleinhanz, gardener for P. A. B. Widener, third. In hybrid teas Mr. Kleinhanz took first and Mr. Robertson second.

Dr. Robert G. Huey gave an interesting talk on the origin and history of the rose, and showed blooms of what he considered the best six of about one hundred of the newer European importations for outdoor purposes. They were — Frau Karl Druschki, Mrs. George Dickson, Paul's Early Blush, Oscar Cordel, Ard Rover, and President Willermoz. The doctor gave cogent reasons why those six had been singled out and I hope to send HORTICULTURE the details at an early date.

HARTFORD FLORISTS' CLUB

The regular meeting of this club was held on Friday evening, 9th inst., with a large attendance of members. Mr. Wirth, chairman of committee on window boxes, submitted an able and instructive report which we will publish later. The report shows how thoroughly the committee performed their task and they were awarded a unanimous vote of thanks.

It was the sense of the meeting that, if a matter so important were thoroughly taken up by the florists' clubs and horticultural societies of the country as a whole, a permanent impetus would be given to this most important subject, and, incidentally, the commercial man would annually add many shekels to his bank account. "'Tis a great and good subject, gentlemen; push it along."

Secretary Ruedlinger read an interesting paper on, "Insect enemies and their antidotes, which interested our forefathers." The secretary is a recognized authority on all fungii and insect pests, and he easily added to his reputation when he minutely described the various brands of "Bey" and their preventives, which have been in vogue from two hundred and fifty years ago down to the present day. He received a hearty vote of thanks.

Arrangements were made for the reception of the executive committee of the Ameriacn Rose Society on the 19th inst.

On account of the impending vacation season, the club adjourned as a body, until the first Friday in September.

MONTREAL GARDENERS' AND FLORISTS' CLUB

At the monthly meeting of the Montreal Gardeners' and Florists' Club on June 5, President Joseph Bennett gave an account of his recent trip to Boston. The great improvements in the city during the last twenty years were noted, the immense number of residential houses, standing in their own grounds, providing a fine field for the jobbing gardener. The excellent system of public parks received high praise. The florists' stores came in for some little criticism with regard to decorations and general order. In the nurseries the general willingness to give information was commented on. Peter Fisher's new carnation, Fairmaid × Enchantress, was regarded as beautiful, an opinion in every way favorable. Montgomery's "rose factory," where the president graduated, was revisited, the fine Beauties which are replanted every other year, being well spoken of. Liberties, too, are exceptionally well handled there. In summing up, Mr. Bennett was of opinion that while the general standard was high, it was no better than Montreal in quality.

The annual picnic of the club is arranged for the 19th of July, and the Convention of Canadian Horticulturists in Montreal, for August 9, 10, 11.

AMERICAN CARNATION SOCIETY

The next annual meeting of this society will be held at Horticultural Hall, Boston, Mass., January 24 and 25, 1906. These dates have been reserved for us, and at this early date there are indications of an unusual interest being taken in this meeting and exhibition.

The preliminary premium list will be issued early in July and will be mailed to all members and any others who may apply. There will be some special features that will be of interest to all carnation growers.

Special premiums and inquiries should be addressed to the secretary.

ALBERT M. HERR, Lancaster, Pa.

NEW YORK FLORISTS' CLUB

The New York Florists' Club observed Ladies' Night on the evening of Monday, June 12. The attendance was not as numerous as it might have been had it not been a very stormy day, but the fair sex was well represented and the occasion was a most enjoyable one for all. The usual business of the club was first attended to, this being the last session until the September meeting. In the meantime the club's "outing" will take place, and from the report of chairman J. Austin Shaw of the outing committee, presented at this time, a big success is assured. The schedule of events and prizes makes an interesting book. Mr. Shaw reported that $200 worth of advertising had been secured for the schedule, and prizes to an equal amount had been contributed by the club's members and friends for the various games. Mr. Langjahr made a gratifying report to the effect that the committee which he represented had succeeded in securing through Commissioner M. S. Kennedy, the rescinding of the rule excluding children under fourteen years of age from the park conservatories in Brooklyn. Cottage Gardens made a splendid display of pæonies. Charles Lenker was also represented by two vases of pæonies and Alex. Guttman contributed a vase of remarkably handsome flowers of carnation Victory. After due recognition had been given these exhibits, President Traendly turned over the management to entertainer J. B. Nugent, and the remainder of the evening was devoted to the strawberry and ice-cream problem, with results highly gratifying, while filling in the gaps with piano solos and singing by various members, Mr. Nugent especially winning great applause in the latter pastime.

NEW YORK FLORISTS' CLUB OUTING

The list of games at the fifth annual outing of the New York Florists' Club is as follows:

Ladies' Bowling Match, fifteen prizes; Baseball Game, married vs. single; Press Bowling Contest; Bowling Match, 12 prizes; Baby Prize, handsomest baby under 2 years of age; Girls' Race, under 6 years; Boys' Race, under 6 years; Girls' Race, under 7 years; Boys' Race, under 7 years; Girls' Race, under 8 years; Boys' Race, under 8 years; Girls' Race, under 10 years; Boys' Race, under 10 years; Girls' Race, under 12 years; Boys' Race, under 12 years; Girls' Race, under 16 years; Boys' Race, under 16 years; Throwing 50lb. Weight; Young Ladies' Race; Married Ladies' Race; Sack Race; Members' Race; Quarter Mile Race; Fat Men's Race, 200 pounds or over; Married Men's Race, over 50 years of age; Potato Race, for ladies. Special Contest, to be announced on the grounds.

Generous premiums have been donated for all the above contests. The date is Wednesday, June 28, 1905. Steamer *Isabel* leaves foot of East Thirty-first street at 9.45 A.M. for Glenwood-on-the-Sound. The arrangements are in the hands of the right people and there will be lots of fun for everybody.

NEWPORT HORTICULTURAL SOCIETY

A regular meeting of the Newport Horticultural Society was held Wednesday evening, President Sullivan in the chair. The attendance was large and the proceedings unusually interesting. The outlook for the June exhibition was shown to be very promising. On account of some unexpected contributions for special premiums, the amounts for several classes were considerably added to, especially for second and third premiums. The consensus of opinion seemed to indicate that hybrid perpetual roses will be about at their best on June 27. Hitherto there appeared to be considerable doubt, but the recent rain and somewhat warmer weather in prospect, warrant the expectation of seeing good roses for the exhibition.

THE HURST AND SON MUSICAL SOCIETY

For a number of years, President M. N. Sherwood of the well-known English nursery firm of Hurst & Son, has maintained in connection with his employees, for the promotion of pleasant social relations, a musical society which has been a signal success from the start.

The seventh season was brought to a successful termination with the annual "House Concert" which took place at the Cripplegate Institute theater on May 2d, when a minstrel entertainment was given by members of the society before a large and appreciative audience. The troupe consisted of some seventeen darkies, the parts of corner-men being capably sustained by Messrs. E. Sherwood and F. Washington, (Tambos); A. Moorcock and W. H. Cross, (Bones); who continually convulsed the audience with their absurd jokes. Mr. W. Jerry's impersonation of "Mr. Johnson" was also a great success. Certain members of the troupe gave songs during the evening, amongst them may be mentioned Mr. A. Cox, whose rendering of "Like stars above" proved very soothing. Mr. A. Moorcock was well applauded after his pretty coon song, "My Starlight Queen," and Mr. W. H. Cross was excellent in his artistic song, "Aint ye comin' out my Juliet," receiving an encore. Mr. E. Sherwood was greeted with prolonged applause for the singing of a coon song of his own composition entitled, "Sally, my only own" (words by Mr. R. Main, a member of the society). Other songs were sung by Messrs T. A. Baldwin, P. Moll, Washington, Vine, Jerry, and G. David, and a tragic recitation by Mr. T. Forster, who not only succeeded in clearing all the niggers off the stage, but was also the recipient of a dead cat, which quickly dismissed him. During the interval refreshments were partaken of, through the generosity of one of the partners. The second half of the entertainment consisted of a scene à la "Cosey Corner Girl," song "The Whistling Coon" by Mr. Percy Moll, and an extremely clever stump speech by Mr. F. Washington. The evening concluded with a screamingly funny sketch entitled, "Wax-ination Gratis." The entire production was under the direction of Mr. F. A. Washington (Hon. Sec.), whose untiring efforts played an important part in making the evening the success it was.

CALIFORNIA STATE FLORAL SOCIETY

The California State Floral Society has decided on holding a fall exhibition in October — "a show of fall flowers that shall excell in variety and arrangement any that has heretofore been held by the society." Circular letters to this effect have been sent out this week to all growers and dealers in the State to govern themselves accordingly. Judging from what I have heard on the side about this, it is likely that a conference will be held within a few days between managing directors of the society and an authorized committee representative of the Pacific Coast Horticultural Association, and that the result will be unity of action between the two in making the show a brilliant success.

NOTES

The Worcester County Horticultural Society at its meeting on Thursday, June 15, gave a special exhibition of pæonies.

The exhibition of the Dutchess County Horticultural Society will be held this year at the new Columbus Institute, Poughkeepsie, N. Y., instead of the State armory as heretofore.

The annual rose show of the Holyoke (Mass.) Horticultural Society will be held at the Unitarian church lecture-rooms on the afternoon and evening of June 30.

NEWS NOTES

A plant storage house belonging to Mrs. E. H. Kingsley at West Gouldsboro, Me., was destroyed by fire on June 5.

The place of Jos. Labo, Joliet, Ill., was totally destroyed by hail, May 30. The storm was the severest that ever visited this section of the country. Chicago Carnation Co. and J. D. Thompson Carnation Co. escaped with a few lights broken. Hartshorne's pæony fields fortunately escaped the storm.

Frank Pelicano, head of the San Francisco plant and cut-flower store bearing his name, is proprietor of a seven-acre calla plantation six miles from the city. The now blooming sight well worth while going to this plantation to see, is the yellow calla, Mrs. Roosevelt, a variety Mr. Pelicano thinks is a stronger grower than either the Elliottiana, or Peutlandi.

It is announced that a donation of $25,000 has been donated to the Brooklyn Institute for the equipment of a botanic garden, for the purpose primarily of affording instruction in botany to the students of public and private schools.

The garden is to be adjacent to the museum building, on the lands reserved by the city for a botanic garden and arboretum. A special committee, headed by former Mayor Charles A. Schieren, has been appointed on plan and scope of the proposed garden.

OBITUARY

James Muldoon, for many years in the employ of Julius Lang, wholesale florist, New York, died on Wednesday, May 31, of locomotor ataxia.

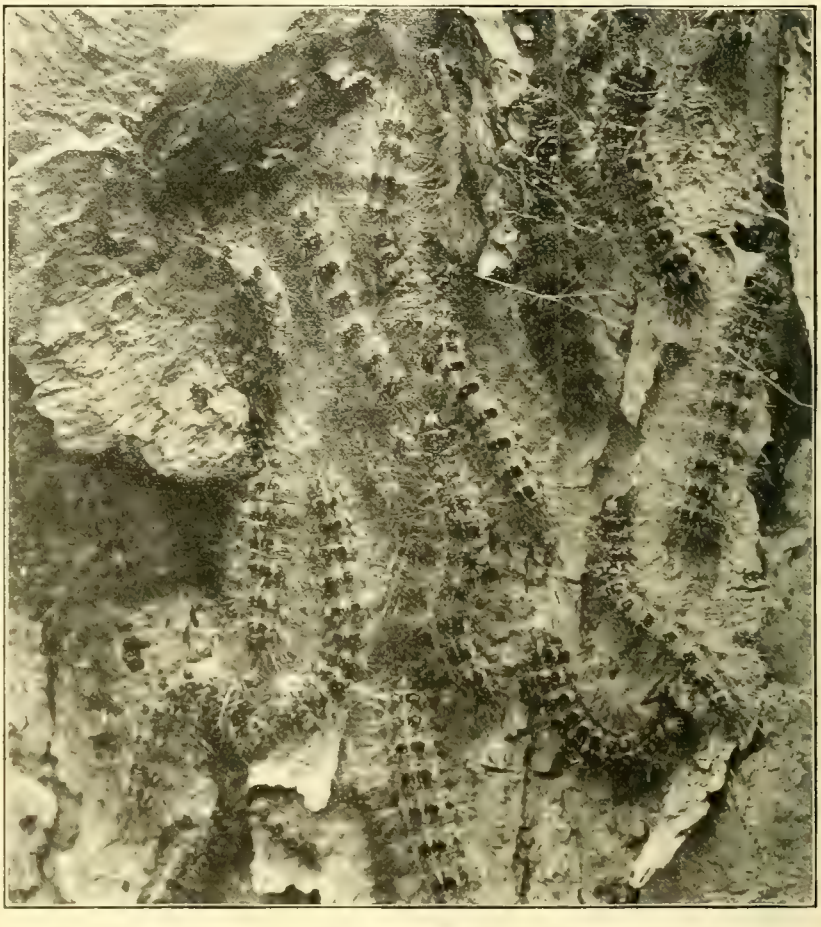
David Smeaton, a well-known florist of Des Moines, Ia., was killed by being thrown from a carriage in which he was riding with his wife in Alberta, Canada, on May 31. He was seventy-three years old.

On May 23d, 1905, at King Road, Walton-on-Thames, Surrey, Eng., Edith Annie, eldest daughter of John and Mary Glass, and widow of James W. Withers, of Jersey City, N. J., aged thirty-five years.

Mrs. R. B. Holmes of the Holmedale Greenhouses, Madison, N. J., died on Saturday, June 10. Mrs. Holmes has been in failing health for some months. The Holmedale Greenhouses have been established twelve or thirteen years and are among the best known of the Madison rose-growing establishments.

MOTH SUPPRESSION IN MASSACHUSETTS

Report of the Committee of the Mass. Society for Promoting Agriculture.



The possibility of killing these moths by poisoning the foliage of the plants on which they feed not having, it appeared, been fully recognized in this State, your Committee arranged in May for a public exhibition of this method of insect destruction on a scale large enough to be conclusive.

The trial was made on May 22 and continued through four days, and on May 31 and June 1 was supplemented by an additional application of poison to prevent invasion from unsprayed woods and trees in the neighborhood. The work was done under the direction of Mr. J. A. Pettigrew, Superintendent of the Boston Park System, whose report on the details of the work with its cost is appended.

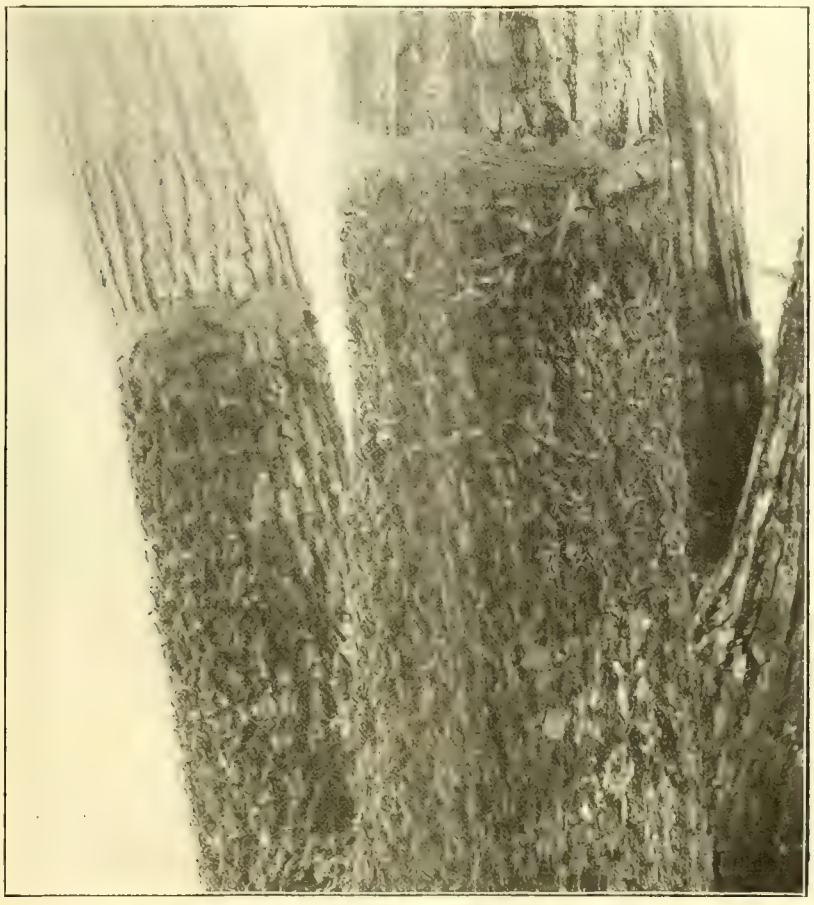
The piece of land in Melrose selected for the experiment, 11.4 acres in extent (the area as given by the engineers of the Metropolitan Park Commission), was covered with a growth of white pines, oaks, beeches, apple-trees, willows, and hop hornbeams, and with a dense undergrowth of alders, sumachs, barberries, witch hazel, and seedling trees of several species. All the trees were badly infested with the nests of the brown-tail moth and the egg-clusters of the gypsy moth, and old walls and piles of stone gave safe and convenient shelter for egg-clusters. No work of suppression of any sort had been attempted on this land, which appeared to your Committee to be as badly infested as any piece of land of similar size that could be found in the State.

The difficulty and expense of thoroughly poisoning the foliage on this particular piece of land was increased by the thick growth of trees and shrubs and by the unusual height of many of the trees. Several pines and elms exceed a height of seventy to eighty feet, and could be covered with poison only by the use of a forty to sixty foot ladder, the average size of all the trees being probably much above that of the forest growth in the infested region. Spraying operations were simplified by the fact that every part of the land could be reached by hose from the pump stationed on a highroad, and by the convenient access to water. Setting the height of the trees, their number, and the dense undergrowth against the exceptionable facilities for operating the pump and obtaining a supply of water, the cost of the first four days' work ($21.87 per acre), exclusive of the cost of the machine and hose, can perhaps be safely taken as a fair average cost per acre of thoroughly spraying woods in any part of the infested region. More powerful machinery, better adapted to spraying on a large scale, and some cheaper form of poison may, however, be expected to reduce the cost of the operation.

A careful inspection of the sprayed area made on June 7, showed that the foliage had not been destroyed. Only a few half-dead caterpillars too feeble to be dangerous, and soon to die, could be found on the leaves, while piles of dead caterpillars on the ground showed the effect of the poison. Trees in the neighborhood that had not been sprayed,

GYPSY MOTH CATERPILLARS ON TRUNK OF A WALNUT TREE

DEFOLIATION BY GYPSY MOTH IN JULY, 1904



and on which no work of suppression had been done, were on June 7 entirely denuded of leaves. So far, therefore, as killing the caterpillars on this piece of ground is concerned, the experiment has been entirely successful. It shows:

First, that it is practicable to apply poison to the foliage of trees crowded in woods in sufficient quantities to insure the death of all insects feeding on it; and that it is not necessary to try other means of destruction if the spraying is done effectively and at the right time.

Second, that this method of destruction of the gypsy and brown-tail moths is cheaper and more effective than any of the methods which have been in general use for the destruction of these insects.

Third, that this method makes possible the preservation of the young trees and shrubs necessary for the perpetuation and beauty of the forest, previous attempts to destroy the gypsy moth on trees growing in woods being dependent on the destruction of all small plants able to afford them shelter and retreat.

Of the possibility of the easy destruction of the caterpillars of the brown-tail moth by arsenical poison when they are fully grown in spring, or in September, when they are first hatched, there is no question. Our experiment has shown that it is practicable to kill by arsenical poison the caterpillars of the gypsy moth when they are first hatched, but it is still to be demonstrated that poisoning is effective against the full-grown caterpillar, and it is evident that the mature caterpillars entering a sprayed territory will not be killed by poison applied six weeks earlier to trees which have produced new leaves since the application was made. Spraying, to be really effective, must be general, or, if it is not general, sprayed ground must be protected from invasion by some mechanical device.

Caterpillars Checked in Climbing Tree by Sticky Band
Trunk 18–in. in Diameter

Of the value of spraying against these insects on isolated street or orchard trees there can be no question. For such trees no matter what their size may be, it is effective and cheap. A comparison now of some of the large elm trees on the sprayed territory on Wyoming avenue with the elm trees of similar size on many sterets of the infested district will show the value of arsenical poison. In many cases these street trees have been carefully and laboriously cleared of egg-clusters and nests, but the impossibility of getting the last cluster or the last nest is shown by the presence on these trees of enough caterpillars to defoliate them. The impossibility of destroying all the egg-clusters of the gypsy moth in any given locality is well shown, too, at this time in the Middlesex Fells, where thousands of the caterpillars can be seen on trees in regions from which all undergrowth has been removed and where it was believed every egg-cluster had been killed.

C. S. Sargent,
John Lowell,
H. S. Hunnewell,
Committee.

Using Petroleum Flame to Burn Gypsy Moth Eggs in Crevices of Rocks

REPORT OF J. A. PETTIGREW

Dear Sirs: Agreeably to your request that I take charge of an experiment proposed by your Society for the suppression of the gypsy and brown tail moths, by spraying the foliage attacked by them with an arsenical solution, I arranged for the mounting of a Worthington steam pump of 35 gallons per minute capacity, on the frame of a portable steam

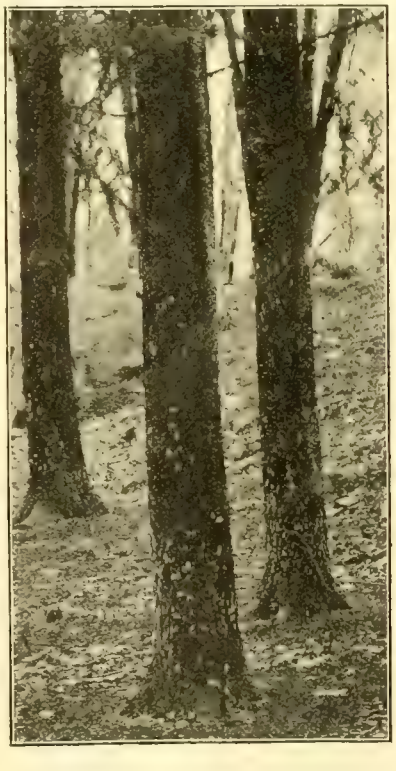
boiler of 8 horse-power, the whole costing $485, which attached to an ordinary 600-gallon street sprinkler, made an apparatus capable, under a pressure of 120 pounds per square inch in the pump chambers, of projecting two streams from $\frac{5}{16}$-inch diameter nozzles to a height of fifty to sixty feet. Another stream conducted through a perforated pipe into the sprinkling tub served as an agitator for the poisonous solution used. 200 feet of 1½-inch diameter hose was used as a main supply for the two distributing hose, which were each 200 feet in length, the first 100 feet being of one-inch diameter while the second 100 feet of each was ¾ of an inch in diameter, on the ends of which were the nozzles. An additional street sprinkler of 600 gallons capacity was used as an alternate to keep the pump in constant use. A single horse supply wagon, three sets of 40-foot extension ladders, and a corps of eight men, one foreman, two teamsters, and an engineer completed the equipment.

The piece of woodland selected by you was located at the junction of Ravine Road and Wyoming avenue, adjoining the Middlesex Fells Reservation, being entirely bounded by these roads and containing 11.4 acres. It is filled with a heavy and tall growth of pines and deciduous trees, which were badly infested with gypsy and brown-tail moths.

When the work of spraying commenced, on May 22, the gypsy larvæ were about ⅜ of an inch long, and the brown-tail larvæ about ⅝ to 1 inch long. The spraying was completed in four days. Subsequently, a lighter gasoline machine of three and one-half horse-power, and four men were employed for four days from May 31 in adding a second coat of the solution, at the edge of the woodland to a depth of fifty or seventy-five feet, to meet the present invasion of brown-tail larvæ from the woods across the boundary roads, and of the gypsy larvæ later.

Disparene, a composition of arsenate of soda and acetate of lead, was used in the proportion of ten pounds of the solution to one hundred gallons of water. At least two-thirds of the area had to be sprayed from ladders, on account of the height of the trees, about 160 of them being 60 feet high and upwards. When conditions were favorable, foliage seventy-five feet distant laterally could be covered with fine spray. To make the solution more adhesive to the foliage, flour, molasses, and glucose were each tried in turn, being mixed with the solution — the result in each case was satisfactory.

The net cost of first spraying was $240.09, or at the rate of $21.87 per acre. With the supplemental spraying of the borders included, the net cost was $338.04, or $29.65 per acre. The total cost of the work was $304.34. This includes cost of transport of equipment to and fro, and for time lost by men working so far from home, which is deducted as not being a legitimate charge in the cost of the work.



The poison was found to be effective against the gypsy larvæ on the second day, many being dead, others appearing sick and torpid. In a week the effect was much more noticeable, the larger and stronger brown-tail larvæ being also similarly affected, while nearly all of the larvæ of the gypsy moth were dead.

Very respectfully submitted,

J. A. Pettigrew

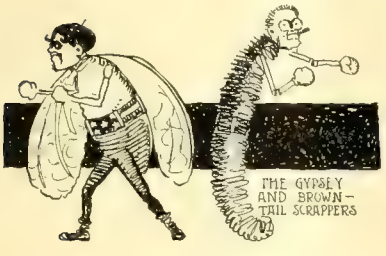
Boston Park Spraying Machine in Operation

Gypsy Moths Depositing Eggs, Prevented from Going Higher by Sticky Bands

EXTERMINATION IN ANDOVER

The trees belonging to the town of Andover, Mass., are in fine condition, attesting to the efficient work performed last winter by the tree warden J. H. Playdon, and had other property owners been as zealous in their endeavors as he, this section could be handled next winter so as to insure the practical annihilation of the pest. An interesting fact probably not noticed by every one is that the trees, especially elm and maple, in close proximity to an electric light are the ones most affected, as the moths during their flying state are attracted by the rays. The territory systematically covered was within a mile and a half from the center of the town, and represented from twenty to twenty-five miles of roadway. The amount expended was between five and six hundred dollars.

A delegation from Portland, Me., including the mayor and thirty other dignitaries, visited the Boston Park Department on Wednesday, June 14, and were escorted by Superintendent Pettigrew over the system. Park Commissioner A. W. Smith and Superintendent F. M. Floyd, of Portland Parks, called on Horticulture. They are deeply interested in the moth problem, which promises to become a live local topic in Portland very soon.



The Agricultural Experiment Station of the University of Illinois has issued Bulletin No. 98, devoted to the "Curculio and the Apple" by Chas S. Crandall. It records the investigations undertaken because of the serious and wide-spread injury to the apple crop by curculios, giving in full the life history and habits of the insect, characteristics by which it may be recognized, and the various means of control that have proved beneficial. There are three colored plates and a number of half-tone illustrations.

WHEN THE FOREIGN BUGS ARRIVE

By Lewis Allen

(Dr. L. O. Howard, chief of the Bureau of Entomology at Washington, has sailed for Europe where he will visit Italy, Austria, Germany, and England in search of varieties of bugs that will be physically superior to the gypsy and brown-tail moths, now infesting this State. These pugilistic calosomas he will bring home and turn loose on the moths here, in hopes they will be able to annihilate them.)

Behold the chief will sail away,
Will sail the briny froth,
And capture buglets, day by day,
To fight the gypsy moth.
He'll travel Europe 'round about
From Rome to England's strand
And capture, like a Western scout,
Some bugs from ev'ry land.

The gypsy and the brown-tail bugs
Are Jeffries of their kind,
And equal calosoma thugs
Are difficult to find.
So Howard goes like warrior King
To find the bug that fights
And homeward he expects to bring
Champion parasites.

The Poundathump Fitzsimmorine
From Italy's fair land,
Is somewhat of a peacherine
And fights to beat the band.
Mayhap he'll smite the Jeffries moth
Much quicker than a wink,
And yet the gypsy may get wroth
And put him on the blink.

The Whacker Plexacorbettjim
From Austria's hills and dales
Is full of lively fighting vim,
His jaw is hard as nails.
So when he takes a brown-tail bite
And keeps it up with zest,
He'll make a sorry looking sight
Of Massachusetts' pest.

Chabfurter Weinasharkey lives
Within the Kaiser's realm,
And just to hear the name he gives
Will almost overwhelm.
But when he meets the foreign foe
He won't have hard to strive
To get the Jeff bugs on the go
And eat 'em up alive.

Now Pokeishihout Hittinghart,
'E's quite a lusty chap;
'E comes from London's busy mart,
'E doesn't give a rap
For all the Jeffries bugs that bite,
'E knows wot 'e's about,
'E's ready to stand up and fight
And knock 'em down and out.

— *Boston Journal.*

BEVERLY, MASS., SCHOOL CHILDREN BRINGING IN THEIR COLLECTIONS OF BROWN TAIL NESTS FOR PRIZES

OUTDOOR ART AND CRAFT

The young of the San José scale will commence to travel within a few days. A good syringing with a solution of whale-oil soap at this period will kill them.

Now is the time to start to train the young conifers so that they will make symmetrical specimens by and by. It takes but a few moments time to run a little rod of bamboo down alongside the stem and secure a permanent "leader" by fastening a promising growth with a strand of raffia, cutting out any growths likely to interfere.

President Roosevelt has proclaimed a new forest reserve in California, to be known as the Lassen peak reserve, which covers part of the northern Sierra Nevada range, and contains 900,000 acres. Perhaps one hundred years from now this will be regarded as one of the most statesmanlike acts of his administration. — *Boston Globe.*

A number of those in the vicinity of Union street, who lost trees some time ago through the escaping of gas from the mains at Springfield, Mass., are to receive $75 for a perfect tree, and for others according to figures of comparative valuation furnished by the city forester. An effort was made to get $100 for a perfect tree, but the company would not agree to the terms.

New Hampshire has planted this season, 20,000 pine seedlings in Bedford where the land has been denuded by a lumber company. The activity shown by the State authorities together with the freedom with which young pines are voluntarily springing up on waste lands all over New Hampshire, promises well for the future pine forest resources of that State.

It is well worth the effort to make a visit to the F. R. Pierson Co. nurseries at Scarboro, N. Y. The planting of ornamental shrubs is exceedingly decorative in effect and shows their individual and massed beauty in a way that is impossible with the usual "nursery row" method of planting. Mr. Pierson believes it pays to "garden" nursery stock instead of "farming" it.

The question of a public park is being agitated in Schenectady, N. Y. A number of the prominent citizens it is said, are disposed to purchase the necessary land, while it is available, if the city will take it off their hands when it has the funds. The site regarded most favorably is between State and Union streets, above McClellan street, and the natural beauty of the place, combined with its easy access from the city, would seem to make it ideal for this purpose.

City Forester Horvath, who is now in charge of all arboricultural work in the city of Cleveland, has given much attention to the planting of trees on public streets this spring. There are five districts and in all of them 1,260 trees have been planted exclusive of over 300 American elms on St. Clair street, and the park frontage. Sycamore, lindens, and Norway maples were the only trees planted in streets not adjacent to park property. Further planting will be resumed in the fall.

Seed Trade Topics

Items, personal or otherwise, of interest to the seed trade are solicited and will be given a place in this column.

J. C. Vaughan of Chicago, has been visiting the trade in San Mateo and Santa Clara Counties, Cal., during the past week.

Henry Nungesser arrived in New York last week on the *Kaiser Wilhelm II*, this being his thirty-ninth trip across the Atlantic.

In connection with the Seedsmen's Convention at Alexandria Bay, June 20–22, a special excursion has been arranged by steamer down the St. Lawrence to Montreal, "shooting" the famous Lachine Rapids.

Particulars can be learned by those attending the convention.

It was stated in this column last week, that the condition of the pea crop was causing growers some uneasiness. Since then, Michigan, where 75 per cent of all the garden peas used in this country are grown, has been visited by one of the worst storms in its history, and immense damage has been done not alone to the pea crop, but to beans and all other crops. The loss is placed at hundreds of thousands of dollars. Grand River went on the rampage and in the lower parts of Grand Rapids it is reported, water flowed through the streets to the depth of four feet and with a current like a millrace. Hundreds of houses were flooded and the damage to property was very heavy. What was a fear a week ago, is now a sad fact, the only question being the extent of the damage. This cannot be positively known for several weeks, but already prices have hardened on future peas and beans, and growers are either refusing to quote or are asking ten to twenty-five per cent advance over prices ruling a few weeks ago.

AMERICAN SEED TRADE ASSOCIATION

The program for the twenty-third annual convention of the American Seed Trade Association at the Crossman House, Alexandria Bay, New York, is as follows

OPENING SESSION, TUESDAY, JUNE 20, 10 A. M.

Order of Business

Report of the secretary and treasurer; election of members; reports of committees; reading of communications; unfinished business; new business; general discussions; annual election and installation of officers.

Program

Points of interest at the Thousand Islands, Major J. H. Durham, Cape Vincent, N. Y.

Early History of the Seed Business, Charles H. Breck, (Joseph Breck & Sons, Boston, Mass.).

Increasing or Restricting Membership in the American Seed Trade Association. Albert McCullough, (J. M. McCullough's Sons Co., Cincinnati, O.).

Seed Growing in California, Lester L. Morse, (C. C. Morse & Co., Santa Clara, Cal.).

The Science of Business Building, R. U. Conger, (Mgr. Sheldon's School of Scientific Salesmanship, New York City).

Methods of Advertising, William Henry Maule, Philadelphia, Pa.

Growing and Keeping Onion Sets, C. F. Wood, (Wood, Stubbs Co., Louisville, Ky.).

Is the Vocation of Seed Dealing a Promising Field for Young Men? Mel. L. Webster, Independence, Ia.

Good Seeds which do not Grow, C. L. Allen, Floral Park, N. Y.

New and Desirable Forage Plants, Prof. C. V. Piper, (U. S. Department of Agriculture, Washington).

Trials and Pleasures of the Seed Trade, H. L. Holmes, (The Holmes Seed Co., Harrisburg, Pa.).

The Modern Seed Catalogue, M. B. Templin, (The Templin Co., Calla, O.).

Question box during Executive Sessions.

NEW VARIETY OF SWEET POTATOES

A new variety of sweet potato having great economic value has been acclimated in the experimental gardens of Bordeaux. It is a native of Dahomey and very prolific. The leaves of the plant can be used as a substitute for spinach, and the tubers, containing a higher percentage of sugar than beets, are fine flavored and make exceptionally good food for live stock. At present the authorities have only a limited quantity of tubers, and as these are to be used wholly for reproduction it will not be possible to obtain samples for American experimenters until next year. A few hundred "sprouts" have been distributed among French agriculturists. A box containing ten of these 'sprouts" has been placed at the disposition of the American consul, as the representative of the Smithsonian Institution, but as the young growths are extremely fragile and very susceptible to changes of temperature it is feared they may not survive transit to the United States, however well they may be packed.

ALBION W. TOURGEE, *Consul.*

BORDEAUX, FRANCE, *April* 21, 1905.

A GLASS WAR?

The Interstate Window Glass Manufacturers' Association was organized at Columbus, O., on June 13, by independent manufacturers from Ohio, Pennsylvania, Indiana, Illinois, Missouri, and Kansas, representing about one-half of the independent interests of the country. The principle purpose is to consolidate issues in the fight against the glass trust, whose machine glass is made with less expense.

It is probable that the independents will ask their employees to submit to a wage-reduction of from 20 to 25 per cent. This feature is still under consideration.— *Transcript.*

CATALOGUES RECEIVED

One of the most interesting catalogues which has come to our hands, interesting not alone in its contents, but in its typographical beauty, is that issued by the Mt. Hessarlik Nurseries of New Rochelle, N. Y. Hardy garden material is the feature and it is presented to the eye and intelligence of the reader in an irresistible manner.

LIST OF PATENTS

Issued June 6, 1905

791,508. Weeder. Titus Snyder, Louisville, Ohio.

791,650. Fruit-Pitting Machine. Kernel T. Rikert, San José, Cal., assignor of one-half to Ebenezer C. Stowe, San José, Cal.

791,623. Hoe. Albert E. Holmes, Milwaukee, Oregon.

791,704. Fruit-Picker. Charles Lardner, Buffalo, N. Y.

791,746. Power Fruit-Press. Harvey M. Barngrover, San José, Cal., assignor to Anderson-Barngrover Manf'g Co., San José, Cal.

791,815. Fruit Pitter and Parer. Robert L. Pollock, Sterling, Kan.

Copies of any of the above patents can be obtained by sending ten cents in stamps to E. G. Siggers, patent lawyer, Station G., Washington, D. C., by mentioning the HORTICULTURE.

A certificate of incorporation has been filed at Albany, incorporating the Burnham, Hitchings, Pierson Co., at $2,000,000 capital. The incorporators are as follows:

W. A. Burnham, Irvington, N. Y.; Lyman B. Craw, New York City; Henry F. Lord, Irvington, N. Y.; Andrew Elder, Irvington, N. Y.; E. W. Hitchings, Montclair, N. J.; Charles Armitage, Montclair, N. J.; Charles G. Hall, Montclair, N. J.; Lincoln Pierson, Madison, N. J.; Paul M. Pierson, Ossining, N. Y.; William Sefton, Jersey City, N. J.; Henry C. Griffin, Tarrytown, N. Y.

CUT-FLOWER MARKET REPORTS

BOSTON Compared with last year the cut-flower business is sluggish at this date. Pæonies which were about over at this time one year ago, are now only beginning to come in from local growers. Jacqueminot roses are also just commencing to make an impression, with the chances that they are likely to rule lower than heretofore, on account of the competition of Liberty which is now grown in fine condition for this market and is at present the leader in popular favor; lily of the valley from frames is still being received and it has a depressing effect on the value of the greenhouse crop which ordinarily reaches its equilibrium by this date. Carnations are not only abundant but of excellent quality, owing to the favoring cool weather thus far.

BUFFALO Up to Friday last business was not at the best, there being plenty of flowers and plenty of rain. Old Sol no doubt gave Buffalo its share as well as someone else's share; with a soggy atmosphere, thunderstorms, and rain (almost enough for the season) it was hard on stock, especially carnation; those shipped from any distance were half asleep upon arrival. Pæonies played an important part and a good many were handled and moved fairly well, there being a strong demand and good prices for white. The usual amount of roses is being received. Of medium quality the sales are normal, while selects are selling readily. A good supply of Beauties is being received and the demand has somewhat increased, the shorter grades being best sellers. Sweet peas and promiscuous flowers are in good supply.

CHICAGO There was not much business done the first half of the past week; a deterrent factor was the enormous supply occasioned by the bright and warm weather, but even had the supply been in moderate offerings it is doubtful if it would have resulted in injecting the needed activity into the trade. The shipping demand was light and speculative trading was almost eliminated. Commencing Wednesday, the market was characterized by a substantial contraction in supply, which had the effect of developing a firmness in almost the entire market. Encouraged by the better tone some sellers tried hard to secure higher prices, but in this they met with a small measure of success.

American Beauties are in shorter supply, many of the specialists cutting from a limited batch which is reserved for the end of the season crop; however it is sufficiently equal to the demand. Rose planting is now on in full force. Offerings of Brides and Bridesmaid are smaller but still more than the ample needs of the buyers. Kaiserin Augusta Victoria rose has made its appearance, Wietor Bros. and J. A. Budlong showing the best quality. Liberty is the strong feature of the rose market, and the quality produced by Geo. Reinberg has never been equaled in this market; his cut promises to hold out for six weeks longer. There is an improved demand for carnations, especially noticeable on Estelle. For Budlong's Stella, a grand white variegated, $3.00 per hundred is paid where something exclusive is wanted; quality of carnations is excellent for this season of the year. Lilies are in fair proportion to the demand. Lilium auratum is already coming in with several growers. Pæonies galore; colored sorts in great abundance, the supply of white falling far short and prices showing gains. Calla supply light. Adiantum selling slow. Asparagus Sprengerii and plumosus are given preference. Ferns from Massachusetts and Michigan are plentiful. Outdoor sweet peas are now offered; lavender is the best seller; supplied only moderately.

LOUISVILLE Business conditions the past week were very favorable, owing to the numerous commencements. Carnations still sell, with the quality and quantity shortened, and there is no lack of roses of good quality. The demand for sweet peas is exceptionally good, and there is an abundant supply. Pæonies are not so plentiful, as the season is about over. Lilies still sell well.

MONTREAL The week has been a busy one in the stores; bedding stock has cleared up well; much funeral and church decorative work has also been carried out on a large scale. Roses have been in great demand; fine long-stemmed Beauties especially going well. Carnations, too, are keeping up well in quality and price.

NEW YORK The present week sees a tremendous influx of pæonies and the advance guard of what will shortly be an avalanche of gladioli. The cut-flower market is not in a condition to bear up under this and the heavy receipts of regulation material such as roses, carnations, lily of the valley, etc., and wholesale circles have a rather glum aspect, which is reflected in the retail establishments where summer lassitude seems already to have taken control. The variety of flowers presented is especially noticeable. Asters, dahlias, and stevia jostle pæonies, irises, and philadelphuses and, undoubtedly, if one were to make a demand for a bunch of chrysanthemums they would be forthcoming from somewhere. Jacqs are pushing the ordinary market rose one side for the time being. Most of the latter are badly mildewed. Carnations are good and cattleyas are superb.

PHILADELPHIA A very fair week for time of year — quite as good as expected. Roses went very well, especially American Beauties, although these are not bringing any fancy prices. Liberties and, in fact, all good colored varieties went well — a good deal better than white for commencement trade. Carnations very slow. No life about the market whatever, although quality all right. Sweet peas were very popular, but prices were low on account of the immense quantities coming in. Pæonies were plentiful and in good demand. Lily of the valley trifle in excess of demand, but was in fine shape and prices kept close to normal. A few gardenias still coming in, but going only medium. Double white petunias have been on the market for a short time and bring 75 cents per 100. They are popular for funeral work. Adiantum, smilax, and asparagus, enough to meet all requirements and prices about normal.

SAN FRANCISCO Cut-flower merchants report superabundance of stock of all kinds, and prices from under normal down; that this first week of June, now closing, has been remarkable for quantity of "quality" weddings, and that these festive affairs have afforded the only business florists have had thus far this month.

THE PLANT TRADE IN NEWPORT

The rush of planting is nearly over in Newport and the growers are satisfied. In some lines local dealers were short; begonias, for instance, which a few years ago had been all the rage had quieted down considerably for a while, but this year there was a rather unexpected demand for them. Dahlias have just about held last year's position; the phenomenal increase in the demand for them has not materialized. Fuchias are slowly, but persistently gaining recognition. Where these attract most attention is outside stores and when displayed in windows by retailers. Pansies sold very well and in many instances at fancy prices. Hydrangeas are as popular as ever, with plants in tubs selling most readily while smaller plants for planting in the open were frequently called for. Hundreds of native cedars planted during the last year or two had to be replaced because suddenly they took to themselves a rather brilliant metalic color, which was not altogether to the liking of those on whose estates they were planted. The trees could not help it, and even if they could, why should they be blamed for getting bronzed after being forced to come here in their old age, while others of a different and higher intelligence come here for that same purpose? Trees twenty feet high with two-thirds of their roots chopped off in the digging cannot be expected to thrive luxuriantly, especially when planted as single specimens, as has been done here; but for all this, however, the dead have given place to the living, and it is hoped with considerable more promise of a longer lease of life to those just planted, by reason of younger trees with more roots being chosen for the second trial.

BUSINESS CHANGES

A. R. Johnson has started in business at Bellevue, Ky.

A. Peterson has sold his place at Paxton, Ill., to Addems & Morgan Company.

Lilly, Bogardus & Co., have opened a store on Market street, San Francisco.

Mrs. A. A. Wilson has opened a new store at 24 South B street, Virginia City, Nev.

W. Austin has sold out his greenhouses and business at Genesco, Ill., to the Hill Floral Co.

The Nevada Floral Parlor is the name of a new flower store opened by W. J. Thomas at Tonopah, Nev.

M. L. Tilton has purchased the business and greenhouses of the Mt. Carmel Floral Co., at Mt. Carmel, Ill.

Anthony Lawson has leased the greenhouses of John McDonald at Farmer City, Ill. Mr. McDonald will retire from business.

M. S. Donoghue of St. Johnsbury, Vt., has purchased the E. H. Howland estate in Springfield, Mass., for $23,000, and will take possession immediately.

BUSINESS CHANGES IN CHICAGO

There is a rumor afloat that Chicago is to have another wholesale store, with 50,000 feet of glass, now under construction.

Albert Lies of Tuohy and Western Aves. has bought the John Brod place at Niles Center, Ill., Zeck & Mann will handle the cut.

Frank Williams, proprietor of the Atlas Floral Co., has purchased of N. Mosconesotes and N. Alexandrias the Masonic Temple flower store. James Aldons will be in charge.

Charles Wolf, formerly with Gollan & Wolf, Downers Grove, Ill., is building a range of six houses, 28 x 100, to be devoted to Brides and Bridesmaids. Cut will be handled by E. H. Hunt.

The sensational law suit of millionaire George B. Wilson against the Philadelphia wholesaler Samuel S. Pennock, has been withdrawn. Wilson first sued his gardener, Alphonse Pericat, for misappropriation of funds received from the sale of orchid flowers, but failed to make his point. Then he sued Mr. Pennock for the sums paid to Pericat. After having put Mr. Pennock to a deal of trouble and expense in preparing to defend himself, the case has been withdrawn on the eve of going to trial — a virtual confession of the unjustness of the claim. The consensus of opinion seems to be that the whole business has been a piece of childish spitefulness all through.

ROSES

For immediate removal we offer a limited number of good clean healthy plants at extremely low prices as we are in need of the space they occupy.

		100	1000			100	1000

PÆONY GIGANTHEA

Devoted to the FLORIST, PLANTSMAN, LANDSCAPE GARDENER and Kindred Interests

Published EVERY SATURDAY At 11 Hamilton Place, BOSTON, MASS. Subscription, $1.00

Something New for Decorating

Now that the season for Wild Smilax is over and no more stock can be supplied, I wish to call your attention to the Branches of the Huckleberry Tree as a most elegant Decorative Green.

It is largely used by the Florists of the Pacific Coast, Washington, and Oregon, in Decorations. The Branches are FLAT, very thickly furnished with exceedingly lustrous green leaves, and it seems to adapt itself to almost any position in decoration that the Wild Smilax can be used in.

As the Introducer of Southern Wild Smilax, I think you can give me credit for knowing a good thing when I see it, and I am convinced that in Huckleberry Branches, you will have a very beautiful substitute for the Wild Smilax, of great value to you through the months of May and June.

I am anxious to get the Verdict of the Floral Trade on this introduction and offer to send you a Case on Suspicion, price $2.50 per case if it suits you, nothing if it does not. Will you try a case on these terms?

Yours very truly

CALDWELL THE WOODSMAN

The Man who gave you the Wild Smilax

CARNATIONS

STRONG ROOTED CUTTINGS

We offer first-class stock of the finest varieties

VARIEGATED LAWSON.—This variety which we are introducing this season we are sure will prove to be the very best variegated sort. Pure ivory white with delicate carmine pencilings. Mr. W. N. Craig, an authority on everything pertaining to horticulture, says that he knows that this variety will outbloom the favorite Mrs. M. A. Patten three to one. It has the Lawson habit and stem, and is bound to give satisfaction. **$12 per 100, $100 per 1000.**

RED LAWSON.—A bright red sport of Lawson that is bound to be popular, and will be grown where Lawson is popular. **$10 per 100, $75 per 1000.**

CARDINAL.—Bright cardinal, or crimson-scarlet. Won first prize for best 100 scarlet, first prize for best 50 carnations any color, first prize for best 50 scarlet seedlings, Chicago. **$12 per 100, $100 per 1000.**

FIANCEE.—The queen of pink carnations; in a class by itself. Magnificent flowers, strictly fancy in every respect. **$12 per 100, $100 per 1000.**

FRED BURKI.—Recommended as an extra free-blooming white variety and a claimant for popular favor. **$12 per 100, $100 per 1000.**

WHITE LAWSON.—We consider this variety, which we introduced last season, the most profitable white carnation ever sent out. We think it will outbloom any other white two to one. It has given great satisfaction. When the flowers are left on the plants until fully developed they are much larger than Mrs. Thos. W. Lawson. We believe this will occupy among white carnations the same place that Mrs. Thos. W. Lawson does among pink carnations. Remember that we are headquarters for it. Splendid stock ready for immediate delivery. **$7 per 100, $60 per 1000.**

LADY BOUNTIFUL.—A magnificent white of last season's introduction. **$6 per 100, $50 per 1000.**

MRS. M. A. PATTEN.—This grand variegated carnation has given splendid satisfaction. **$6 per 100, $50 per 1000.**

DAHEIM.—Dark crimson. Grand stiff stem. Calyx never bursts. Free and abundant bloomer, developing very quickly. We consider this the best all-round crimson carnation. **$6 per 100, $50 per 1000.**

ENCHANTRESS.—Freest blooming, bringing highest market prices. In great demand. **$4 per 100, $30 per 1000.**

MRS. THOS. W. LAWSON.—**$3 per 100, $20 per 1000.**

PROSPERITY.—A magnificent fancy carnation. **$3 per 100, $20 per 1000.**

We are now prepared to book orders for 1906, for

The Coming Scarlet Carnation

VICTORY

This is a real bread-and-butter variety. An early, free, and abundant bloomer, with good stem; a magnificent keeper and shipper; flowers of the largest size, commanding the very highest price. This is going to be a money-maker. Orders will be filled in rotation, as received, delivery beginning December next. **$12 per 100, $100 per 1000.**

Shower Bouquet of Sweet Peas

During the spring and early summer, we use a great many bouquets of sweet peas. A cibotium leaf suggests the shape of a shower bouquet. Adiantum Farleyense adds very much to the effect.

W. H. Battle.

Herbaceous calceolarias

Herbaceous calceolarias, when well grown, take a foremost position among decorative flowering plants during the months of April and May. The wonderful markings and vivid colors to be seen in a collection of these plants, at once attract attention, and there is no reason why they should not be much more generally grown, especially in private gardens, than is now the case. I propose in the following few lines to give a short outline of their cultivation that will be likely to lead to success.

First, a packet of seed must be obtained from a reliable source, and the latter end of July is a good time to sow it. Procure some pots or pans that are thoroughly clean, which must be well drained and filled with a light, sandy soil; also see that the surface is quite level. Water well before sowing. On account of the minute size of the seed it is best not to cover it all with soil; simply scatter it over the surface.

When sown, place the pans in a cool, shady place in the greenhouse and cover with a sheet of glass. The seed should not require watering until it is up, but if it should get anything like dry, of course it must be watered, and the best way to do this is to hold the pans in a pail of water and allow it to soak through from the bottom, rather than watering overhead at this stage. As soon as possible to handle the seedlings, with a piece of pointed stick they should be pricked off into five-inch pots, a couple of dozen or so in a pot, using the same kind of light, sandy mixture as before and watering with a very fine rose. It is always advisable to prick off about double the number it is intended to grow, as these young plants are very liable to damp off. This damping is, I consider, one of the greatest difficulties the cultivator has to contend with, and this is the reason I prefer to prick them off into a comparatively small pot rather than boxes. There are more chances, for if a box once starts to damp it takes a lot of stopping, and the entire box is likely to be lost. If the grower can keep the young seedlings just moving and healthy until the cooler nights of late September and October, he will have made a good start.

When the plants are large enough and nicely rooted, they should be transferred singly to the smallest size pots, still using a light, sandy soil. They must always be placed in a shady position on a moist bottom and have a fine syringing overhead several times a day in hot, bright weather. A mean temperature of from 45 to 50 degrees from now on through the winter will suit them admirably. As soon as the small pots are well filled with roots, shift to three-inch pots, and at this stage, some well-rotted cow manure in the proportion of one to five may be mixed with the soil to advantage. Later pottings in January and February may be to six-, eight-, and ten-inch pots for the more vigorous specimens. For the final potting, cow-manure, well-rotted, in the proportion of one to four, and a good dusting of bone meal with the soil may be used.

The worst pest to which these plants are subject is green-fly, and they must be given no quarter. It is well to fumigate once a week or ten days, when no difficulty should then be experienced in keeping them quite clean and healthy. The plants should never be crowded together after potting, but always allow a good space between the pots for a circulation of air, or the lower leaves will quickly damp. When the flower spikes appear they should be neatly staked out, and on commencing to flower, the collection will probably last in bloom from six weeks to two months, delighting all who see them and proving a rich reward for the patient, painstaking cultivator.

John Heeremans.

Indispensable Water-lilies

No garden, comprising an area of a city lot or the dimensions of a city park, is complete, without a lily-pond, but what is suitable for the latter might be entirely out of place in the former. What is necessary in both instances is a judicious selection, and this requires a familiarity with species and varieties. In a small pond it is often very desirable to accommodate as many varieties as possible, and a selection is made of both hardy and tender varieties. The result is failure or partial failure, as the tender or tropical nymphæas grow more rapidly than the hardy varieties, and at a time when the latter are inclined to be less active, that is, when warmer weather sets in, the hardy nymphæas suffer in consequence. In large ponds it is equally as necessary to make a proper selection, and instead of planting single plants, clumps of several plants of one variety should represent one nymphæa of the desired color; and where it is desirable to plant the native Nymphæa odorata, plant that by itself alone, and if in a large pond, its companion, N. o. rosea, may also be planted. The same will apply to Nymphæa tuberosa and its varieties. Do not plant these with the Marliacea varieties and it will save much annoyance and future trouble, as all forms of odorata and tuberosa seed freely, and in an incredibly short time they will monopolize the pond and all forms of Marliacea Laydekeri and other varieties will suffer in consequence.

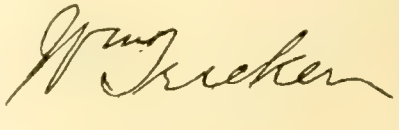
No hybrid nymphæas produce seed and they are propagated only by division, hence no seedhouse offers water-lily seed for sale, save such as odorata and tuberosa amongst hardy, and some species of tender nymphæas.

The hardy nymphæa seed loses its vitality at a very early date if dried, consequently a very small percentage germinate when sown in spring. Nymphæas ripen their seed in early fall, and naturally are deposited in the water, or rather in the pond, where they germinate at once. Late ripened seed remain in the natural deposit until warm days in spring. To preserve seeds of hardy water-lilies, keep them in water, but, better still, sow as soon as ripe. Seed of tender nymphæa may be kept dry for two or more years and may be sown at any convenient season.

Victoria seed requires to be kept in water. A temperature of 65 degrees is sufficient to keep the seed in a dormant condition, although V. Trickeri will germinate in this temperature. V. Regia requires a temperature of 90 to 95 degrees. For early use victoria seeds may be sown end of January or early in February; the seed will germinate in three weeks. When the plants can be handled, a temperature of 85 degrees is sufficient and suitable plants for transplanting into permanent quarters can be assured in three months. Victoria plants as usually grown are annuals, and require a tropical temperature to develop them, but a high temperature during the shortest days of the year is maintained only by extra firing, which is unnecessary and not conducive to strong, healthy plants.

Water-lilies cannot be grown with any degree of satisfaction in winter. Some of the tender varieties can be carried over, but hardy varieties must have their natural rest. They may be started early and can be had in flower in March, but it is useless, save for propagation purposes. Greenhouse space is too valuable in winter to devote to water-lily culture, especially for the commercial florist. True, there are two or three varieties that will flower during winter, and when a person wishes to indulge in such a pastime he can do so, but it is not commendable.

The following are some of the best nymphæas in cultivation and, although they may cost a trifle more, they are as easy to manage as the cheapest; besides they give a smack of progressiveness and up-to-dateness.



White, hardy, for large ponds. — N. odorata gigantea, N. Gladstoniana, and N. tuberosa Richardsoni. For moderate-sized ponds. — N. Marliacea albida. A beautiful white form of N. reniformis or tuberosa was put on the market a few years ago as N. blanda, but the latter is not white and I can find no record of it out of its native habitat, which is South America, save as herbarium specimen.

Pinks, for large ponds. — N. odorata rosea, N. Marliacea rosea. For moderate-sized ponds. — N. o. William Shaw, N. o. Caroliniana, when this variety can be obtained true to name, which is now very seldom, N. Marliacea rosea.

Other shades between pink and crimson, which include some of the best of the hybrids, are N. rubrapunctata, N. gloriosa, N. Robinsoni, N. Andreana, and N. James Brydon.

Yellow. — For large or medium-sized ponds, nothing can surpass N. Marliacea chromatella. N. o. sulphurea is a good yellow, but in some localities it has suffered from the attacks of a fungous disease. N. Mexicana is a rich yellow, but the flowers are small. It should be planted in a pond by itself, when it will make a grand showing. It is perfectly hardy in the vicinity of Philadelphia and doubtless will prove to be hardy anywhere, where N. odorata is hardy.

There is no yellow N. reniformis or tuberosa. N. chromatella was first named N. tuberosa flavescens, but was renamed N. Marliacea chromatella, by which name it has since been listed. There are no yellow tender nymphæas in cultivation. All nymphæas are vigorous and, under culture in artificial ponds, should be liberally treated All varieties enumerated above should be allowed 9 to 10 cubic feet of the best compost to each crown or single plant.

British Horticulture

A SWEET PEA SPECIALIST

THE new giant-flowered sweet pea, Gladys Unwin, which is being distributed by Messrs. Watkins and Simpson, is attaining increasing popularity. It was raised in 1901 by Mr. W. J. Unwin, of Histon, Cambridge, and is a sport from Prima Donna. The color is a delicate shade of pink, with a bold and crinkled standard, with long stems and vigorous foliage. It is very hardy, and a large percentage come with four blooms on the stem. Mr. Unwin has about an acre of this variety growing, and he cultivates some seventy different kinds. Nearly two acres are devoted to the culture of bloom for market purposes. It is found that pink is the best selling tint, as it shows up well under artificial light. White is also in demand, owing to its use for bouquets and wreaths. Mauve is not so popular now as was the case six years ago. Orange shades are in demand, but they have the drawback of taking the sun too much. Mr. Unwin finds that the darker shades are worthless. He had Mars, Navy Blue, and Black Knight on trial, but the salesmen stated that they could not sell them. The flowers are put in boxes of two or three dozen bunches, and sent to Covent Garden, Manchester, Sheffield, and other centers. In the packing, white paper is used for pink blooms, and blue for other tints.

METHODS OF CULTURE

It is sometimes said that sweet peas will not grow on the same ground year after year, but Mr. Unwin's experience does not coincide with this, for he has grown them to advantage on the same field for eight seasons. Mr. Unwin is a strong believer in autumn sowing. As regards manuring, he recommends horse dung for a clay soil, and cow manure for a gravelly soil, with the addition of a little soot and bone-meal. It is also found that superphosphate is a useful fertilizer for the crop, a good handful to the yard run each side of the row being very helpful. A good mulching of long stable manure is given before the hot weather sets in.

When the plants are up they are lightly dusted along the rows with soot to keep off slugs, and covered with a few strands of black cotton as a protection against birds. When the plants are three inches high hoeing around them is done, and the soil is made to form a mound on each side of the row. In the spring the plants are thinned out to six inches apart, the strongest being left, and sticks are put in. Mr. Unwin believes in rows in preference to clumps. He has not been able to find anything better than sticks for the rows. Sheep wire-netting has been suggested, but this is considered too expensive. The peas grow from six to eight feet in height, and in favorable seasons the cutting commences in the last week in May. It is found that the demand for bloom is somewhat uncertain, a great deal depending upon the weather.

GUERNSEY GLASS CULTURE

This country imports 53,596 tons of tomatoes, and of this quantity Guernsey supplies 13,000 tons. Some time ago I spent a pleasant holiday among the Channel Island growers. It was an interesting sight to see the large expanse of glass-houses filled with marketable crops. It is estimated that there are 4,500 of these structures, and the glass covers 632 acres, the length of the houses if put end to end being 153 miles. Besides this area there are about 300 and 400 acres planted in bulb and flower crops. In the greenhouses the standard crops are tomatoes, followed by beans, with grapes trained over the roofs. The Guernseyman grows three crops to the Englishman's two. The area of the land being restricted and its value high, the most is made of the small holdings available. Last year the island exported over two million packages. More than half the export revenue is derived from tomatoes, which are grown out-doors as well as under glass. One grower who produces tomatoes in the open, states that he makes a profit of £37 per acre. The success of the crop is always an uncertainty owing to the vagaries of the weather. The tomato-seed is sown in boxes in November, the young plants being pricked out and planted permanently early in January and commence to crop about the end of April. From that date to the end of September the crop is a source of activity and profit.

GREEN PEAS UNDER GLASS

For some years good supplies of early green peas have come to Covent Garden from the nursery of Mr. Norman Davis, of Framfield, in Sussex. Mr. Davis expects to have a crop of about 100 bushels this season, and as the prices are usually good, he finds this a profitable line. These are grown in unheated houses, and as soon as the Jersey crop is over, Mr. Davis is able to start picking. In describing his experience in this department Mr. Davis states: "My chief success and what has proved most interesting to me has been the growing of culinary peas under glass in May; these I have grown for several years in sucsession, and no crop has paid me better. Such crops, however, are uncertain unless unusual facilities are at hand, but they require no heat. Notwithstanding the discouragement market-gardeners meet with, such as unfair taxation of glass-houses, excessive railway rates, uncertain markets, and other drawbacks, I am of opinion that there is scope for extended cultivation of choice early vegetables. Englishmen need fear no foreign competition, but one must be quick to learn the requirements of markets." Besides this branch, Mr. Davis has secured fame as one of the leading raisers of chrysanthemums in the country. He has introduced several well-known varieties which have come to the front in recent years.

W. J. Adsett.

London, May 24, 1905.

HORTICULTURE

AN ILLUSTRATED JOURNAL

DEVOTED TO THE

FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY BY

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford, 292

WM. J. STEWART, Editor and Manager.

The Editor Has His Say

The abundant rains that have visited all sections of New England within the past two weeks have greatly improved crop conditions and allayed serious apprehensions due to the unprecedentedly light rainfall throughout the entire winter and spring. The season is regarded as nearly two weeks late, but now that copious showers have soaked the ground and revived all vegetation it will not take long to "catch up."

And still another, "The Olympia Florist," goes up in New York to the tune of $3,000 liabilities and no assets. A contemporary naïvely states that all these debts were contracted between April 15 and May 15, this year. Did the dealers who sold so freely to an irresponsible concern take any steps to ascertain its right to such a credit? The time will come when growers and wholesale florists will realize and act upon the necessity for some reasonable general understanding as to who are entitled to credit and how much. That the subject is being agitated is a promising sign.

The Association of Park Superintendents, no longer a local New England institution, honors Buffalo with a visit this year. We think that, when our Buffalo brethren see and realize the character of the gentlemen composing this useful organization and come under the influence of their cheerful and inspiring presence, they will understand the cause of our regret at seeing the society widen out into a national organization, thus depriving us of the pleasure and benefit of these annually recurring gatherings in New England territory, where the society had its inception, with their advantage of close personal contact and the consequent delights of tightly cemented friendships.

New England, with its rugged mountains and rock-bound coast, is destined to become the great vacation resort for the people of a large section of our country in the future. The visit last week of the Portland representatives, to inspect the park system of Boston, shows how strongly the park idea is taking hold of the public and calls to mind the suggested scheme for a State parkway along the coast of Massachusetts, New Hampshire, and Maine, extending from Boston to Portland and perhaps beyond. Already there are many public or semi-public reservations along this section in Massachusetts, and the idea of linking them together as proposed is by no means merely visionary.

There is some foundation, we think, for the opinion expressed in the report of the Hartford Florists' Club committee on window-boxes, that the florists, themselves, are largely to blame that window-box, porch, and veranda-gardening is not more advanced in American communities than it is to-day, and the suggestion that the commercial florist endeavor to stimulate business in this line by preparing and offering window-boxes of various grades for sale is in the right line. Then there is always the certainty of achieving results by the influence of good example. Florists in residential communities do not always give enough attention to the adornment of their own premises. "Shoemakers' wives and blacksmiths' horses may go barefoot" without injuriously affecting their respective industries, but a florist who fails to make the best use of his specialties, about his place of business and his home, robs himself for to-day and for to-morrow.

With this issue HORTICULTURE closes its first volume. Volume 11 will begin with the July 1 number, and in future new volumes will start January 1 and July 1, regularly. We announced our purpose at the outset to cover the field in a different manner from that of any other periodical. A look through the completed volume will show how closely we have adhered to our purpose. It makes a book of 978 pages of *good* reading, most of it as useful to-day and for a long time in the future as when it was written. Reading matter with a permanent value, as is the contents of HORTICULTURE, carries with it an added value for the advertisers, and we doubt not that advertisements in HORTICULTURE's pages will be doing good work long after the "gossip" journals of even date have gone to the waste-box. We feel that we are justified in our pride over our first volume. The second will be as much better as we can make it. If not a subscriber heretofore, begin now, and invite your friends to subscribe also. We offer tempting club rates.

"And what is writ, is writ, — Would it were worthier!"

PHILADELPHIA FACTS AND FANCIES

The building so long occupied by Fred Ehret at Broad and Fairmount avenue is to be torn down to make way for the new Temple College University. The consideration is said to have been $150,000. Mr. Ehret has not yet decided as to his new quarters, but these will doubtless be somewhere in same vicinity.

Augustus P. Dumont, well known in the wholesale cut-flower trade here from his association with his son Horace, died on the 18th inst. aged 73. He was a sufferer for the past year from that dire and painful malady, cancer.

Eighty thousand roses, and good ones at that, Beauties, Brides, Bridesmaids, etc., bought in the open market, were used by a big department store here as souvenirs to their customers for their June opening days. Time was when this would have given the market a boost, but it was hardly noticed in the present enlarged condition of supply and demand.

S. S. Pennock objects to this Ginger Jar paragraph:

"The florist who hasn't time to read the trade papers and keep up with the procession, has generally time enough to hold down a cracker box in the grocery store. I have seen a number of such men in my recent travels."

S. S. owns up to want of "time to read," but objects to "the cracker box" part of the proposition. I cheerfully grant him absolution. He is at the other extreme. The one I meant was the one who had too little to do — not he who had too much. But methinks Sam doth protest somewhat redundantly. I notice that mighty little escapes his attention — not even a Ginger Jar paragraph!

Commodore Westcott, when I last saw him, on the 16th inst. at Waretown, N. J., was having the time of his life entertaining some twenty-five or thirty guests at his seaside club house, the occasion being the annual opening. Among those we remember having seen there were — William Graham, Robert Kift, George Anderson, John Burton, William K. Harris, John W. Dunham, George Redford, Walter F. Ware, Alfred Hoegerle, David Rust, A. Y. Hanna, A. B. Cartledge, William B. Westcott, William F. Gude, Samuel S. Pennock, H. H. Battles, Robert Craig, Robert W. Clucas, George Craig, Henry F. Michell, Charles H. Eimerman, and D. C. Donoghue. Most of the guests stayed over until the 19th. If there be any fish left in Barnegat Bay after these mighty fishermen's visit, it will be queer, or, to quote the poet:

"Can such things be
And overcome us like a summer cloud
Without our special wonder."

An interesting feature of the opening day was the presentation of a handsome onyx clock to the Commodore by his guests. Robert Craig and John W. Dunham made the presentation speeches, and a feeling and eloquent response came from the recipient. Another incident of unique interest was the exhibition of mule-driving by the Commodore while the guests were being brought from the station. White duck pants, a blue and white seersucker coat, a flowing blue tie, and a sailor cap may not be the ideal Jehu costume, but that made no difference. The mules covered the ground with the best of them, and were neck and neck at the finish with the horse flesh.

Fred Muller, 67th and Greenway avenue, has been awarded by a road jury $6,000 damages against the city for change of grade. The appraisers made it $6,900 odd. Mr. Muller is satisfied with the $6,000, and hopes the award will stick.

Out of the Bean Pod

"And better had they ne'er been born,
Who read to doubt, or read to scorn."

John Barr, of South Natick, is erecting a dwelling of fourteen rooms, adjacent to his greenhouses.

Florists from Stoneham and Woburn are suffering from the rash occasioned by the brown-tails. Probably some of them will be a little more enthusiastic in the work of extermination hereafter.

I want to say a few words in favor of that much-abused bird, the English sparrow. A field of carnations set out in May, was badly infested with cutworms. As we were cultivating, I noticed several sparrows busily employed, and upon close inspection, we found them engaged in carrying away the cutworms. Frequent cultivations, with the assistance of the sparrows, have almost entirely exterminated the worms in the field. I'll take off my hat to the sparrow hereafter. He did his work well.

The season for native strawberries is once more here. At this time I always anticipate with pleasure a trip to Lincoln to call on my old friend, Charles Lunt, proprietor of Pine Grove Farm, and in my judgment one of the best authorities on small fruits in this part of New England. Brother Lunt is an enthusiastic strawberry cultivator and his berries are among the finest shipped to the Boston market, according to the report of his commission men, Hall & Cole, of Faneuil Hall Market.

THOS. F. MATTHEWS

BALTIMORE ITEMS

Under a graceful bower of stately palms at St. Mark's Catholic Church, Catonsville, on Thursday afternoon, the 15th inst., at 3 o'clock, Mr. Joseph W. Cook, one of our young florists and growers, was married to Miss Marie H. Scharff. Large palms of different varieties were conspicuously distributed about the chancel, while Harrisii lilies, marguerites, and crimson rambler roses, blended artistically with the background of green, the whole producing a beautiful effect. The chancel rail was also artistically arranged with cut flowers of various descriptions, the color scheme being red and white. Mr. Cook is the second eldest son of Mr. John Cook, one of the leading growers of the State, and is associated with his father in business at 318 N. Charles street. With his young bride he is now on a northern wedding tour and upon his return will take up his duties at their extensive nurseries on Edmondson avenue. We wish him success.

Owing to the lull in business, the beautifully arranged branch office of Messrs. Samuel Feast & Sons, in the main corridor of the Hotel Belvedere, was closed this week for the summer season. The establishment of floral stands in hotel corridors, while a very old custom in New York, Philadelphia, and other large cities, is a new experiment in the floral life of Baltimore. The demand for such convenience at leading hotels was so much in evidence at the opening of last winter's season, that Messrs. Feast & Sons, as an experiment, established a high-class branch office at the Belvedere. The project far exceeded the expectations of the experimenters, and the custom promises to become a very prominent feature in the floral life of Baltimore in the future.

T. E. DOYLE.

SAN FRANCISCO NOTES

This forenoon, June 14, a representative committee of the Pacific Coast Horticultural Society met with a representative committee of the California State Floral Society, the result being a coöperative association for the single purpose of making an "all together" pull for the success of the show of fall flowers, an event originally planned as an undertaking of the Floral Society alone, as announced in HORTICULTURE last week. The date for exhibit was fixed at to-day's meeting for November 9, 10, and 11.

Growers and florists hereabout seem to be unanimous in expression that the scientific world will be startled by an announcement made this week by Professor C. M. Woodworth, who is in charge of the entomological work of the University of California's college of agriculture. The announcement is the discovery of a new species of centipede in the Sacramento Valley, the great central district of California's asparagus-growing section, and that this new pest in the field of horticulture is preying upon asparagus plants, threatening the destruction of hundreds of acres of the crop. And the marvel of it all is, according to Professor Woodworth, that it has not been known hitherto that centipedes preyed upon vegetable life; that in all the literature dealing with the subject the centipede family is rated as carnivorous, yet, after personal inspection, says the professor, the fact is unquestionable that California has a new sort of the centipede family that is attacking asparagus beds in the Sacramento Valley, devastating the fields and striking despair to the hearts of the growers — a distinctly new contribution to the history of the centipede tribe.

Some one or another of the big down-town florists has been in the habit of getting about all the swell decorations as they have happened along, but last week these down-towners magnanimously agreed that a break in the custom had occurred, that the swellest of this month's decorations showed the artistic handiwork of "The Blocks," the trade title of a new flower-stand recently established by Miss Hulda Block and her brother Ben, far away from the down-town florists' district. It was a large church decoration, the occasion being annual confirmation services held in Temple Emanuel, the largest church in the city. The altar and choir balcony were a mass of La Marque roses. In front on either side of the altar stood a fifty-foot high tree, the branches being made up to represent trees of La Marque roses, and with long branches of these blooms the massive chandeliers were tastily draped. Immense vases of Bermuda lilies also appeared in the altar setting. From the ceiling, eighty feet high, were suspended by invisible wires seven huge South Sea Island fern balls, each ball having a diameter of from twelve to fifteen feet.

PERSONAL

Mr. A. Lange, wife and son, of Chicago, will sail on *S. S. Kronprinz*, June 27, for an extended trip to Europe to be gone for three months.

On a fishing expedition to Manitowisch and northern Wisconsin are Messrs. N. J. Wietor, Adam Zender, John Muno, and Henry Muno of Chicago, to be gone for ten days.

W. R. Smith of Washington is visiting Boston this week. He imparts the surprising information that he has been elected vice-president of the society of the oldest inhabitants of Washington. If this sprightly representative of the Capitol City is a sample of the "old" inhabitants, what are the young ones like? Mr. Smith expects to sail for Scotland on the *Parisian*, July 6.

AMERICAN PÆONY SOCIETY

THE EXHIBITION

A beautiful June day greeted the pæony enthusiasts, on the opening day of the Pæony Society's great show in Chicago's Auditorium Hall, famous for its flower shows and its beautiful mural decorations. Such array of colors was never before equaled. The plan of arranging each exhibit to produce an artistic effect, while it increased the judges' work, was, indeed, a great pleasure to the eye, and we can only congratulate the manager and exhibitors on their initiative and enterprise which eclipsed all the artistic splendor of previous shows.

The blooms of distant exhibitors, some of which had been in cold storage for some time, were of remarkably fine quality, and were a good test of lasting qualities and of how to cut pæonies for that purpose. Home-grown stock, the season being at its height at Peterson's Nursery, had an advantage; however, their stock was perfection in itself. Peterson's Nursery showed 210 varieties, named and numbered; E. A. Reeves, Cleveland, O., 2 varieties, named; Vaughan's Seed Store, 25 varieties, all named; J. F. Rosenfield, West Point, Neb., 38 varieties; C. W. Ward, Queens, N. Y., 180 varieties, all named; Jewell Nursery Co., Lake City, Minn., about 20 varieties; and Klehm's Nurseries, Arlington Heights, Ills., a collection. Dozens of visitors carried note books in hand, great interest being centered in Peterson's Nursery entry. The winner of the silver cup in class 10 in this well-grown collection were Marie Lemoine, Festiva Maxima, Madame Cabot, Potsii Alba, Golden Harvest, Delicattissima, Princess Beatrice, Modele de Perfection, Modeste Guerin, Marechal de MacMahon, Purpurea Delachei, and Livingstons. This last named variety also took first prize for best 100 blooms of pink.

The first prize for best 100 crimson was awarded to E. A. Reeves for Lee's Grandiflora Rubra, which shared first honors with C. W. Ward's Monsieur Jules Elie. C. W. Ward's Augustine d'Hour was greatly admired.

Among the visitors were C. W. Ward, Queens, N. Y.; Miss Hubbard, Queens, N. Y.; Mr. and Mrs. F. Lemon, Richmond, Ind.; E. G. Reeves, Cleveland, O.; C. S. Harrison, York, Neb.; A. H. Fewkes, Newton Highlands, Mass.; Robert George, representing Storrs & Harrison, Painesville, O.; W. C. Barry and Mr. Maloy, Rochester, N. Y.; Elmer D. Smith, Adrian, Mich.; H. E. Kidder and E. Slye, Ionia, Mich.; F. A. Baller, Bloomington, Ill.; Eli Cross, Grand Rapids, Mich.

AMERICAN PÆONY SOCIETY EXHIBITION AT THE AUDITORIUM, CHICAGO

JUDGES' REPORT

CLASS 1. C. W. Ward, 1st prize; Vaughan's Seed Store, 2d.

CLASS 2. Peterson's Nursery, 1st; Vaughan's Greenhouses, 2d. Rosenfield entry disqualified because of insufficient number of blooms.

CLASS 3. Peterson's Nursery.

CLASS 4. Peterson's Nursery.

CLASS 5. Peterson's Nursery.

CLASS 6. J. F. Rosenfield, 1st; Peterson's Nursery, 2d.

CLASS 7. Peterson's Nursery.

CLASS 8. Peterson's Nursery.

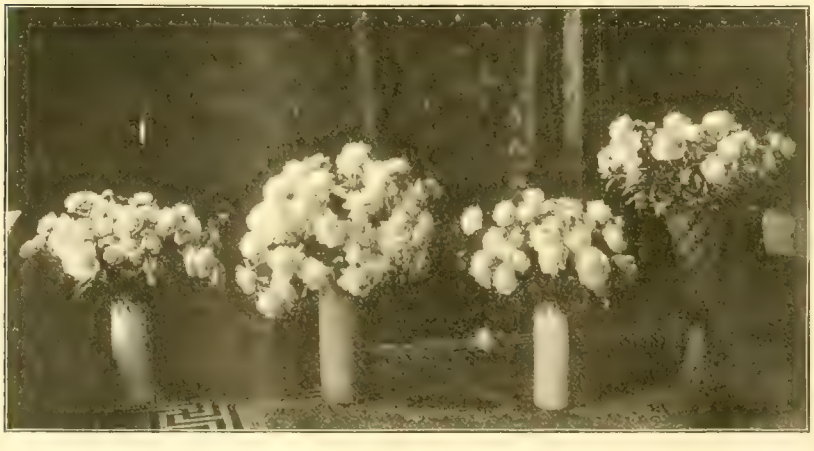
CLASS 9. Peterson's Nursery.

CLASS 10. Peterson's Nursery (silver cup).

CLASS 11. Vaughan's Seed Store, 1st; Peterson's Nursery disqualified on account of insufficient number of blooms.

CLASS 12. Peterson's Nursery, 1st, with Livingston; J. F. Rosenfield, 2d, with Floral Treasure.

CLASS 13. E. A. Reeves, 1st, with Lee's Grandiflora Rubra; J. F. Rosenfield, 2d, with seedling No. 206.



Honorable mention, C. W. Ward, for extensive collection of pæonies.

Honorable mention, Vaughan's Seed Store, for fine collection of herbaceous blooms and Baby Rambler rose.

Honorable mention, Klehm's Nursery, for collection of pæonies artistically arranged.

Honorable mention, Jewell Nursery Co., collection of pæonies.

Ionia Pottery Co. made a display of florist's pots and dishes.

MODELE DE PERFECTION, FLORAL TREASURE, LIVINGSTONE, MONS. JULES ELIE

THE MEETING

The session opened Saturday, 11 A. M., with fair attendance, President C. W. Ward in the chair.

Chas. Klehm, P. J. Hauswirth and E. A. Kanst were selected as judges.

President's address which follows herewith, was next presented.

PRESIDENT'S ADDRESS

Fellow-members: It has now been two years since the organization of the American Pæony Society, and to those who thought that there was no need of such a special society to care for the interests of the pæony, the success of the present magnificent exhibit should be ample proof that the society was not only needed, but really wanted, for it is by such exhibitions as these that we who are devoted to the interests of any special class of floriculture really learn the possibilities that exist when concentrated effort is made to develop all that there may be contained in any special subject.

This is practically the first exhibition of pæony flowers given under the management of our society and what has been done here to-day can be much improved upon in future efforts, for by experience we learn, and the experience leading up to the staging of the present show has already taught us many things that will redound to our benefit in the future and will enable us to stage increasingly interesting exhibits as the years roll by.

No doubt the officers of the society will be somewhat sharply criticised for not providing essays to be read before this meeting, and while not attempting to offer excuses for such lack, I wish in connection with an apology which we offer to members of the society, to say that unfortunately prior to the season at which the pæony show is possible, almost all of the members of our society are driven to exert their utmost energies in order to properly care for the year's business which must be done practically in the two or three months of spring.

One of the crying needs of such an association as ours is the surprisingly chaotic state into which the nomenclature of the pæony has been allowed to degenerate, and

if this association should do nothing else than straighten out in a passable manner the nomenclature of the pæony, striking from the list duplicate or nearly duplicate and worthless varieties, and render it possible for the trade to list fifty or sixty of the best sorts under names and descriptions that would render their identification certain and make possible extensive deals between different pæony growers, insuring the buyer of getting exactly what he wants whenever he places an order, and then should disband, it will have accomplished one of the greatest benefits to floriculture in general and amply repay for all the effort put forth and expense incurred in its organization and maintenance. Realizing the importance of this question of nomenclature, a competent nomenclature committee was appointed and has already accomplished a long step towards straightening out the tangle which has been the source of annoyance and a bane to us all who have attempted to purchase pæonies. I now refer to the extensive test plot at Cornell University which has been planted with upwards of a thousand varieties of pæonies, all of which have been contributed by its members without one cent of expense being incurred by the society. It is a foregone conclusion that this attempt to straighten out the pæony nomenclature, undertaken under the auspices of Prof. John Craig of Cornell University, whose careful and efficient work performed in other lines is ample guarantee for the thoroughness with which this work will be done, will be productive of great results and will place the entire fraternity under obligations not only to Prof. Craig but to Cornell University and lastly but not least, to the American Pæony Society itself.

Fourteen years ago, when I first began growing carnations, they were usually sold upon the market under the designation of red, pink, white, pinks. So far as I know, very few varieties had at that period produced a sufficient impression upon the buyers to be asked for under distinctive names. However, soon after the formation of the American Carnation Society they began to be designated by special names, and at present time retail buyers generally ask for the President, Enchantress, Ethel Ward, or any other variety they wish to purchase, because thereby they identify those blooms which best satisfy their tastes and purposes, and it will not be long before this will be the case with the pæony. At present Festiva Maxima is known upon the New York market as the big white pæony, and all other white varieties are simply designated as white pæonies; but within a comparatively short period buyers will begin to call for Mont Blanc, Festiva Maxima, Mons. Dupont, Marie Lemoine, and other named varieties, because they will want to secure just the effect produced by those sorts and will be able to identify them under their proper titles.

For some years past, the value of the

C. W. Ward, President American Pæony Society

A Field of Pæonies at the Cottage Gardens
Mont Blanc in the Foreground

PÆONY WHITLEYI OR QUEEN VICTORIA

pæony for cut-flower purposes has been recognized in the larger markets, such as Chicago, New York, Boston, and other large cities, but up to the present time there seems to have been no organized effort made to place the most suitable varieties on sale, and a large proportion of the blooms offered seem to have been of the more common kinds composed largely of undesirable shades of color, the result being that the color-value of the pæony has suffered somewhat in popular estimation. In a few years all this should be changed, and a sufficient quantity of the most attractive sorts that are best suited for cut-flower purposes should be grown to supply the needs of the market, and when this occurs the demand for pæonies for cut-flower purposes will be largely increased.

The difficulties of accumulating a large stock of the better varieties that shall prove true to name are great indeed, because owing to the chaotic state of pæony nomenclature at the present time, no one is sure of getting what he orders, unless he is able to visit the pæony fields in blooming time and identify and mark the plants he desires. A somewhat extensive experience in purchasing pæonies during the past ten years has developed some curious results. For instance, in one case a grower sent two absolutely different colors under the same name. This occurred with the pæony Henry Murger. The true Henry Murger is described as an immense bloom of the form and color of the Paul Neyron rose. The first year that the firm in question sent us Henry Murger we got a tall growing, deep purplish crimson, which as yet we have been unable to identify. The following year they sent us a very double creamy white sort, which bore no resemblance either in habit, form, or color to the one sent before. Neither of them resembled in any respect either in habit, form, color, or time of blooming the true Henry Murger. In another case a totally different pæony in point of habit, form, and date of blooming was sent, but of the same shade of color as the genuine variety ordered. The second year from the same firm came, under the same name, another lot which again did not resemble the true variety either in form, habit, or date of blooming, but still of the same shade of color and neither of these varieties resembled in any respect the true variety either in form, habit, or date of blooming with the exception that the shades of color were very close to the true variety. After an extensive experience in attempting to accumulate considerable stock of the specially desirable varieties, I have come to the conclusion that the only practical way to work up a true stock is to purchase a moderate quantity of the sorts from some source where you are able to identify them as true, and then after blooming the plants three years cut out all rogues which may develop and look after the propagating and division of the stock yourself, for I have found where you leave it to employees, they, not having the same interest in keeping the stock clean that you have, will allow errors to slip in. A rogue once introduced in a stock frequently multiplies twice as rapidly as the true variety, the result being a large proportion of rogues when the stock has been considerably augmented. In Holland the custom is to take up pæonies and divide them every year or two, consequently the plants are never seen in bloom and this mode of forcing the propagation is probably the reason why so many rogues are found in the general run of Holland pæonies imported to this country.

The pæony in landscape work. Undoubtedly our favorite flower is one of the most effective of all early flowering herbaceous plants for use in extensive landscape plantings. It not only can be used in masses, producing grand color results, effectively lighting up dark nooks and corners, but they can also be interspersed among shrubbery, lending additional color to such groups. The plants when out of bloom are not very unsightly as is the case with many other herbaceous flowers, but the deep fresh greens and bronzy greens of the pæony foliage are maintained in general good condition throughout the greater portion of the season. The range of pæony colors is unexcelled, comprising almost all the shades of pink, from the most delicate flesh tints to the deepest shades. The same may be said of white, crimson, purple, and amaranth. It is weak, however, in yellow as we have comparatively few sorts that might be termed yellow and these are generally light in color, the guard petals being almost invariably white, and it cannot be said that there is as yet any true solid yellow pæony.

Landscape-architects should learn to know the pæony better, and should become acquainted with the finer and more desirable sorts and should use them more extensively hereafter than they have in the past. I am quite certain that the pæony often suffers in reputation by the use of common undesirable colors in classes of work where good, clean, complementary colors are needed and should be used, and the pæony will never take its proper place in landscape work until landscapers in general become better acquainted with the more desirable sorts and learn to know them as well as to use them.

It is to be regretted that an unfortunate controversy arose over the formation of the American Pæony Society, resulting in forming within the ranks of the Society of American Florists the S. A. F. Pæony Society, or Pæony Committee, as it has more recently been called, giving color to the idea that the Society of American Florists was opposed to, and endeavoring to kill off our association. I have been led to believe that it has been asserted by certain elements in the Society of American Florists that the formation of the Carnation Society, the Chrysanthemum Society, the Pæony Society and other special associations would in the end destroy the Society of American Florists. This I do not believe to be true, and I cannot see any other result from the organization of such special societies than an increased general distribution of flower and plant knowledge among the general public, which in the end will result in increased accession to the ranks of the Society of American Florists. It may be asserted with truth that the Pæony Society has not now, nor will it have in the future, any conflict with any other horticultural body, but it has been formed for the purpose of accomplishing certain special

work that can be done only by and with the hearty coöperation of all of those most vitally interested in the pæony. Personally, I am well satisfied that our association will gladly contribute to the archives of the Society of American Florists, or to any other horticultural body that makes for the good of the florist craft in general, the results which it may accomplish in the way of straightening out pæony nomenclature or any other results which may be considered generally beneficial to the craft. Neither the Pæony Society nor the S. A. F. Pæony Committee has had as yet any great measureable effect upon the increase in the demand for pæonies, for the reason that neither have up to the present time, accomplished any definite advancement either in the improvement of the pæony, or the methods of its culture, or its commercial handling. Aside from a few articles and cultural notes appearing in the press, nothing tangible has gone forth to the general public and these articles have not as a rule eminated either from the Society of American Florists or from the American Pæony Society. Whatever results have been accomplished up to the present time have been largely through the work done by the pæony specialists who are giving their time to the culture of, and investing their capital in pæonies.

The experimental pæony plantation at Cornell University has been made possible only by the voluntary contributions of the principal pæony specialists in America and Europe, who are members of the American Pæony Society.

Reverting again to the unpleasant things which have been said and done in connection with the formation of our society, it may well be said that all opposition and controversy should now cease. The work of the Pæony Society has been so definitely cut out and clearly defined that the few doubting and misguided spirits within the ranks of the Society of American Florists, who have heretofore frowned upon our organization, should now cease their antagonism and bend their efforts towards forwarding a work that will in the end redound to the general welfare and benefit of the entire florist craft as well as the nursery fraternity.

Report of secretary was as follows:

The present membership of the society is thirty-six, not including two honorary members. Since the last meeting, the president has appointed two European representatives of the nomenclature committee, Mr. Dessert, Chenonceaux, France, to represent that country, and Mr. August Koenemann of Neiderwald, Germany, to represent the latter.

During the past year I have had considerable correspondence in regard to pæony lists with the object of completing our preliminary list, but there are some which are still to be received before it can be published. The publishing of the report of 1903-1904 has also been delayed for unavoidable reasons. In the matter of the incorporation paper Mr. Lown, the attorney, reported to me that the certificate of incorporation was filed in Albany, N. Y., July 2, 1904, and a certified copy was deposited at N. Y. County clerk's office, thereby completing the legal incorporation of the society.

The exhibition held during the meeting at New York was a fairly good show, there being about seven exhibitors, staging many fine flowers, but there was a great lack of names, thereby reducing the value of the show. C. W. Ward showed about two hundred sorts, all unnamed but under numbers. Frank Gould, with John J. Morris, Chestnut Hill, Phila., Pa., sixty-three varieties all named. Andorra Nurseries, Chestnut Hill, Pa., twenty varieties, all named. Siebrecht & Son, a large display of unnamed flowers, including about thirty-two varieties. C. Betscher, Canal Dover, forty varieties, all named. C. M. Wild, Sarcoxie, Mo., ten varieties, and F. S. Rosenberg, Walden, N. Y., about eighteen vases unnamed.

Report of treasurer was as follows:

TREASURER'S REPORT

Balance on hand June 4, 1904 . .	$175.50
Receipts advance admittance fees .	15.00
Yearly dues	39.00
Interest	3.55
	$233.05

Expenditures as per Secretary's Order

Account of F. B. Lown .	$21.40	
Account of Arthur Bryant	2.52	
		$ 23.98
Balance		$209.07

Report of committee on nomenclature (already published) was next presented.

Boston, Mass., was selected as the next meeting place.

A motion to send all flowers to the Cook County Hospital at the close of the show was adopted.

Officers were elected for next year as follows: President, C. W. Ward; Vice-President, W. A. Peterson; Secretary, A. H. Fewkes; Treasurer, J. H. Humphreys.

E. A. Reeves succeeded himself as director.

A vote of thanks was tendered to J. B. Deamud, manager of the show.

MASS. HORTICULTURAL SOCIETY PÆONY SHOW

The pæony show of the Massachusetts Horticultural Society, postponed from June 10 on account of the backward season, was held on Saturday, June 17, and was a worthy attraction for a large number of lovers of this indispensable old garden favorite. The best products of Kelway, Dessert, Lemoine, Crousse, Richardson, Hollis and the horticulturists of the Flowery Kingdom were seen in great profusion. The best display — one that has probably never been equaled in any previous shows here — was that of E. J. Shaylor. T. C. Thurlow was also in evidence as usual, with a superb collection in which the singles were especially notable. H. A. Stevens Co. also staged a gorgeous group winning the Kelway silver gilt medal; the bronze medal went to Miss A. M. Means. For a collection of thirty varieties the prizes were won in order as listed, by T. C. Thurlow, H. A. Stevens Co., George Hollis, and Dr. C. S. Minot. For collection of twelve varieties double; O. B. Hadwen, George Hollis. Twelve single; T. C. Thurlow, George Hollis. Twelve Japanese single; George Hollis. Specimen double; T. C. Thurlow with Mme. Boulanger, and the same exhibitor with Lady Alex. Duff. Large vases of blooms were shown by Mrs. J. L. Gardner, Blue Hill Nurseries, and E. L. Lewis. E. J. Shaylor received certificates of merit for Germain Bigot and Mme. Theyeran, both Dessert productions, and T. C. Thurlow for White Lady. Mr. Shaylor received honorable mention for M. Martin Cahuzac, a dark claret of Dessert's. Beautiful indeed were the varieties thus singled out, and there were others well worthy of high honor, such as Lady Alex. Duff, Lady Bramwell, Mme. de Vernville, a lovely white with the fragrance of a June rose, Festiva Maxima which holds its own everywhere, Pottsii alba, the "Decoration Day variety," Claire Dubois, Livingston, Mme. Lebon and Mons. Dupont which is almost a facsimile of Festiva Maxima. Besides the above named exhibitors, E. A. Clark, Wm. Riggs, gardener, Mrs. E. M. Gill, Wm. Nicholson, E. A. Wood, and R. & J. Farquhar & Co., contributed pæonies in quantity, the Blue Hill Nurseries showed hardy perennials, and Warren Heustis & Son boughs of trees and hardy shrubs.

MONMOUTH COUNTY, N. J., HORTICULTURAL SOCIETY

The annual rose and strawberry show of this society was held in Red Men's hall, Oceanic, on June 16th. The following prizes were awarded — Collection hybrid teas, 1st prize, George Hale, 2d, N. Butterbach; collection hardy garden roses, George Hale, 1st, H. Kettel, 2d; twenty-five varieties H. P. roses, George Hale, 1st; twelve varieties H. P. roses, W. Dowlen, 1st, George Hale, 2d; six tea roses, N. Butterbach, 1st; two vases sweet peas, two varieties, George Hale, 1st, W. W. Kennedy, 2d; one vase sweet peas, two varieties, James Kennedy, 1st, H. Kettel, 2d; collection and display of strawberries, George Hale, 1st, William Dowlen, 2d; one plate, one variety, George Hale, 1st, F. Brunton, 2d.

The society's certificates were awarded to Messrs. Butterbach and Hale for foxgloves; George Hale for collection of pæonies; H. Kettel for mignonette; William Turner for carnations and herbaceous flowers; William Dowlen for poppies; James Kennedy for roses; Mr. Longstreet for lettuce; A. Strothmeyer for advance vegetables; F. Brunton for general display; James Dowlen, for cauliflower and one for the Dowlen's new roses. Late in the evening many of the vegetables were sold at auction and brought good prices.

PENNSYLVANIA HORTICULTURAL SOCIETY

Sweet peas and Japanese iris were the features of the monthly meeting of the above society on the 20th inst. Competition was keen in the former, and a grand display of the latest and most improved varieties was staged. For the Dreer Prizes, Wm. Robertson, gardener to John W. Pepper, Jenkintown, Pa., took first, and John McCleary, gardener to Mrs. R. J. C. Walker, Germantown, Pa., second — best bunch each of twenty-one varieties. For the Michell Prizes, William Robertson took first, and John McCleary, second, for fifty sprays each, twelve varieties. For best vase of mixed, James Coleman, gardener to Walter Lippincott, Bryn Mawr, Pa., took first, and Samuel Hammond, gardener to Rudolph Ellis, Haverford, Pa., second. For best vase of Gladys Unwin, 25 sprays, the prize went to Ernest Schreiber, gardener to Mrs. W. L. Elkins, La Mott, Pa. Certificates of merit were awarded to Joseph Hurley for poppies, lilies, and campanulas; to W. Fowler, gardener to Mrs. Charles Wheeler, Bryn Mawr, Pa., for delphiniums and lettuce; and to Samuel Batchelor, gardener to C. B. Newbold, Jenkintown, for Nicotiana Sanderæ. The prizes offered by Dreer for Iris Kæmpferi brought out some fine exhibits, first going to William Robertson, second to Joseph Hurley.

NEW HAVEN HORTICULTURAL SOCIETY

A meeting of this society was held on June 20th. The night was known as rose-night. Mr. Ernest Carroi, gardener to N. W. Kendall, read a very interesting and instructive paper on the hardy varieties, which was followed by a general discussion.

The society has about 125 members, and is constantly increasing. The Board is now preparing for the exhibition, which will be held November 7, 8, 9.

WORCESTER COUNTY, MASS., HORTICULTURAL SOCIETY

The Worcester County (Mass.) Horticultural Society's exhibition on Thursday, June 15, was made memorable by a remarkable display of pæonies staged by E. J. Shaylor. The collection included nearly one hundred varieties, many of them rare.

George McWilliam showed Lilium Philippense. There was an attractive general display by several other exhibitors.

GARDENERS' AND FLORISTS' CLUB OF BOSTON

The closing meeting of this flourishing club until after the summer vacation, was held at Horticultural Hall, Boston, on Tuesday evening, June 20, with between eighty and one hundred members present. It was a fitting climax for a season of popularity and useful prosperity, on which President Wheeler may well be congratulated. The membership is still on the increase, nine new names having been proposed and accepted on this occasion.

M. H. Walsh, of Wood's Hole, was the speaker of the evening, and he presented one of those practical papers, the product of his ripe experience in rose culture, which he is so well qualified to prepare. The paper was just such a one as might be expected from this intelligent and observant expert, touching every essential cultural point and emphasizing throughout the value of painstaking care on the part of the rose-grower if he would have plants and blossoms of which he might be proud. After the reading of the paper, Mr. Walsh was plied with many questions, which he answered. Among them was an inquiry as to the comparative value of budded and own-root stock for the production of exhibition blooms in the garden, and he unhesitatingly replied that he had never seen roses on their own roots produce flowers of a size to rival those got from budded stock. He spoke also of the value of root pruning, every six or seven years, which, he insisted, was of equal importance with wood pruning, if good flowers are to be produced. He received a very enthusiastic vote of thanks. We hope to present his valuable paper in one of our early issues.

On the exhibition tables were some very interesting displays, and Messrs. Elliott, Walsh, Pettigrew, and Finlayson made a special report on them as judging committee. The new method of judging and manner of making awards proposed by Mr. Farquhar, having been finally approved at this meeting and intrusted to the executive committee to be put in operation next fall, no distinctive awards were made on this occasion. The exhibits included a table of 50 superb H. P. rose blooms and a plant of Mr. Walsh's beautiful double pink climber, Lady Gay; a phenomenal plant of Begonia Gloire de Lorraine, that had been blooming continuously in one pot for 2½ years; a display of seedling polyantha roses, and Clematis erecta from the Boston park department; some fine examples of Richardson seedling pæony and hybrid aquilegias from R. and J. Farquhar & Co.; fine H. P. roses from W. J. Clemson; a group of seedling rugosas from Rea Bros.; big vases of Spanish iris and hybrid aquilegias from W. N. Craig.

It having been announced that news had been received of the award of a gold medal in England to Mr. Walsh's Lady Gay, hearty congratulations were extended to that gentleman, who jocularly informed the club that if hereafter his seedlings were not adequately recognized in this country he would promptly send them to England.

Secretary W. J. Stewart and W. H. Elliott addressed the meeting on behalf of the coming convention of the S. A. F. at Washington, and urged that the club send a good representation. It was announced by the president that on July 1 the club would, on invitation, visit the greenhouse of William Sim at Cliftondale, and that on July 25 there would be a picnic of which fuller details would soon be communicated. After the close of business, a bountiful collation of strawberries, cake, and coffee was enjoyed, and Frank B. Cannell again entertained the meeting with two bass sea songs, superbly rendered.

MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY

The June meeting of this society was held in their rooms in Madison on the 14th inst., and was well attended. The monthly exhibit of flowers, fruits, and vegetables, was of a high order. A. Herrington showed three vases of roses, two of sweet William, two of sweet peas, and a magnificent collection of digitalis, securing a certificate of merit. J. Heeremans, gardener to A. R. Whitney, showed a fine dish of Gradus peas and a dish of strawberries of the Sharpless type, but more rounded, and thoroughly colored. They were uniformly of the largest size; cultural certificate was awarded. Robert McMullen, gardener to Mrs. J. F. Stone, staged a fine collection of hybrid roses and a vase each of the three rambler roses, crimson, white, and yellow, getting cultural certificate. The judges were Messrs. Duckham, Vince, and Totty.

President Heeremans by request then read a paper on the culture of the herbaceous calceolaria, which was accorded a hearty vote of thanks.

The new schedule for the Fall Show was in evidence. Nearly $500 are slated in the prize list, which is considerably in advance of last year. There will be no meetings in July and August, which will give time to grow the stuff and get the money.

E. REAGAN, *Sec'y.*

TARRYTOWN ROSE SHOW

The sixth annual June exhibition of the Tarrytown Horticultural Society was held in the Lyceum Building on June 13. In spite of the excessively dry season, the exhibits were quite up to the high standard of former years, which showed that the hose had been kept going pretty freely. The show was under the able management of David McFarlane and was very tastefully arranged. The attendance, always good, was even better than in former years, the hall being well filled in the afternoon and crowded in the evening.

Following is a list of the principal prize winners — In the rose classes Mrs. George Lewis, James Ballantyne, gardener, won out for the best vase of 25 blooms and for the best display of climbing roses. Mrs. J. B. Trevor, Howard Nichols, gardener, for the best collection and the best six varieties, 6 of each. For three varieties, 6 of each, the first prize was won by the Misses Masters, Henry Kastberg, gardener, and for 12 blooms, any one variety, Mrs. Ogden Codman, Frank Luckenbacher, gardener, was first. In hardy perennials William Rockefeller, George Middleton, gardener, was first and Mrs. O. Codman second. In strawberries, Mrs. Trevor was first for the best three quarts and the best quart, while Howard Willets, A. Weisenberger, gardener, was first for the best two quarts. Samuel Untermeyer, John Featherstone, gardener, won out with a splendid collection of hardy shrubs. Mrs. George Lewis was first for a collection of sweet peas and first for collection of antirrhinums. In vegetables Mrs. J. B. Trevor and Mrs. Codman were the principal prize winners.

Samuel Untermeyer exhibited a beautiful table of fancy leaved caladiums, also a nice collection of greenhouse fruit. A fine vase of Spanish iris and a splendid vase of sweet peas were exhibited by Mrs. John H. Hall, Francis Gibson, gardener, to which special prizes were awarded.

The F. R. Pierson Co's exhibit, which added greatly to the beauty of the show, included shrubs and herbaceous plants, Marguerite, Queen Alexandra, New Rambler Rose, Leubstern, and their beautiful Tarrytown fern.

WM. SCOTT, *Cor. Sec'y.*

THE NEW JERSEY FLORICULTURAL SOCIETY

The annual rose show of the New Jersey Floricultural Society took place on Wednesday, June 14, in the society's rooms in Orange. The staging provided was entirely filled with roses interspersed with herbaceous blooms, which lent a pleasing variety to the exhibits tastefully arranged under the direction of president D. Kindsgrab. Two classes were provided: Class No. 1, Best 24 roses, in six varieties; Class No. 2, Best 12 roses in three varieties. The first prize in each instance was won by D. Kindsgrab, gardener to William Runkle, with Countess of Oxford, Alfred Colomb, Margaret Dickson, Fisher Holmes, John Hopper, and General Jacqueminot, and Ulrich Brunner, Mrs. John Laing, and Mme. Luizet. The second by Peter Duff, gardener to John Crosby Brown, with Countess of Oxford, Mrs. R. G. Sharman Crawford, P. Camille de Rohan, Capt. Hayward, Baroness Rothschild, and Ulrich Brunner, and Mme. Testout, A. Colomb, and Mrs. John Laing.

Among those entered "not for competition," and rewarded with certificates were, Treadwell Cleveland, Roland Ruddock gardener, for nine vases of roses, eleven varieties, also delphinium and sweet william, first-class certificate. O. D. Munn, John Hayes, gardener, three vases of moss roses, certificate highly commended. A. C. Van Gaasbeck, William Bennett, gardener, vase of rose Caroline Testout and vase of carnations, certificate highly commended. Sidney and Austin Colgate, William Read, gardener, vase of mixed carnations and two vases of roses, certificate of merit. Stewart Hartshorne, Arthur T. Caparn, gardener, vase of white iris, a first-class certificate, vase of delphinium, certificate of merit, also cherries and strawberries. The judges were Malcohn MacRorie, Arthur T. Caparn, and John Rolley, superintendent of Prospect Park, Brooklyn. The show was open free to the public who patronized it well through the evening.

J. B. DAVIS.

SOUTHERN CALIFORNIA HORTICULTURAL ASSOCIATION

As the result of a trade caucus meeting called early this month by J. C. Vaughan, president of the Society of American Florists, a permanent organization resulted last week in Los Angeles, entitled Southern California Horticultural Association, officially equipped as follows:

President, Captain F. Edward Gray, Los Angeles; first vice-president, John Bodgers, Gardena; general secretary and botanist, Ernest Braunton, Los Angeles; recording secretary, W. J. Bodgers, Los Angeles; treasurer, Jacob Dieterich, Los Angeles; horticultural chemist and entomologist, Dr. A. Davidson, Los Angeles; executive committee, F. H. Howard, Los Angeles, chairman, Walter Raymond, Pasadena; D. R. Woods, Wilmington; Miss Etheline Lord and Miss Waite, Los Angeles. Also these county vice-presidents: For Los Angeles County, Edward H. Rust, South Pasadena; San Diego County, Miss K. O. Sessions, San Diego; San Bernardino County, Sidney Hockridge, Redlands; Orange County, Fred Rafferty, Santa Ana; Riverside County, Charles Howard, Riverside; Santa Barbara County, Robert Armstrong, Santa Barbara, and for Ventura County, Samuel Cole, Ventura.

KENTUCKY SOCIETY OF FLORISTS

The regular meeting of this club was held on Tuesday evening, June 13, at the store of William Walker, Louisville, with a fairly good attendance. The sweet pea show has been declared off for various reasons.

A VISIT TO HARTFORD'S FAMOUS ROSE GARDEN

Have you noticed in the garden
Whom the flowers bend to greet?
Have you seen the gallant tulips
Spread their cloaks before her feet?
Have you seen the modest lilies
Turn — still paler as they pass?
They're preparing for her coming,
Sprinkling perfume through the grass
See, the butterflies are poising
Daintily above her throne,
With their fairy wings to fan her
When she comes to rule her own.
Hear! The joyous bees are humming,
"She is coming! She is coming!"
She is crowned with sunshine golden
And her heart is golden too,
To her garden kingdom coming,
Is the royal queen and true.
Ring out, harebells! Ring out, bluebells!
Set the garden all a-tune,
For Queen Rose is crowned in sunshine
In the royal month of June.

— *Boston Herald.*

The executive committee of the American Rose Society in acceptance of the invitation of Superintendent Theodore Wirth and the Hartford Florists' Club, met in Hartford, Conn., on Monday, June 19, and, it may truly be said, had the time of their lives. There were in the party President Alex. Montgomery and Robert Montgomery, Natick, Mass.; Secretary, W. J. Stewart, Boston; Robert Simpson, Clifton, N. J.; A. Farenwald, Roslyn, Pa.; H. A. Siebrecht, New York; F. R. Pierson, Tarrytown, N. Y., and A. Hans, Stamford, Conn., from a distance, and a goodly delegation of the local members of the Florists' Club. Previous to the executive meeting an inspection of the rose garden at Elizabeth Park was made, and, to those who have not seen it before, the scene was one of delighted astonishment. The rose garden proper contains about one-and-one-quarter acres. On a central rustic pagoda, on the boundary trellises, and on the arches over the turf walks, the climbing roses are seen; on the declivity from the pagoda to the garden proper, the trailing varieties luxuriate, and then, in successive circles, are the hybrid teas, hybrid perpetuals, noisettes, and other special classes, one variety to the bed, and comprising about two hundred named sorts. The plants, as a rule, have wintered well, and the display at the present time is one of great beauty. The number of visitors with note-book in hand was especially noticeable, and it is stated that since this rose garden was started, the demand for roses for garden planting has increased 500 per cent with the local nuserymen.

After the executive committee of the rose society had finished its labors, automobiles were brought into requisition and the visitors were treated to a delightful tour through Hartford's spacious, well-kept public parks, calling on the way to see the grounds at Goodwin Castle, where J. F. Huss was pleased to show them what all agreed was the most perfect flower garden, Alpine garden, and hardy fern collection on this continent. The roses here were a revelation of the possibilities of garden roses in America. In the evening a banquet was given by the Hartford Florists' Club in the banquet hall of the leading social organization of the city — the Hartford Club. The decorations of the hall were in splendid taste and profusion. At either end, on the wall, were the initials A. R. S. and H. F. C. in flowers. Two immense banks of roses adorned the table and through the center was a broad plaque of flowers, among which were tiny electric lights. Overhead were festoons and garlands of smilax. Messrs. Coombs, Zuger, and Ruedlinger, the decorating committee, were lavishly complimented, and they deserved it. The menu, too, was a work of art.

President J. F. Huss presided, and, after words of hearty welcome, introduced President Sternberg of the Connecticut Horticultural Society as toastmaster. President Montgomery of the American Rose Society was the first speaker. He said that he had never seen a sight so encouraging to the rose lover as what he had seen to-day and wished that thousands more could see Secretary W. J. Stewart was next called upon, and said that it had now been so conclusively proven what could be done with ability and wise culture, that no one could henceforth dare to say that rose growing in American gardens was an impossibility. The garden at Hartford was an object lesson which would mark a new epoch in rose culture. F. R. Pierson, introduced as the "millionaire florist," pleaded not guilty, and waxed eloquent regarding the educational effect of the display he had been privileged to see. He declared the park system, its finish, care, and beauty to be away out of proportion to what might be looked for in a city of but 80,000 population, and said that Mr. Wirth had produced incredible results from the amount of money at his disposal.

Robert Simpson, who was the next speaker, spoke amiably for New Jersey and characterized the Goodwin gardens as a veritable Garden of Eden, a delight which he would not have missed for the world. A. Farenwald made an impassioned but practicable appeal to the Connecticut rose lovers present to come to the support of the rose society. He said that the roses he had seen were an inspiration. The carnation men's talk of $20,000 and $30,000 deals was all in the air; the rose is at the bottom of all the wealth in the floral profession to-day, and it is a marvel that the rose society is not stronger.

Theodore Wirth received an ovation as he responded to the introduction as a man of growing national reputation, Hartford's popular favorite. He gave in a modest way his story of how the rose garden was conceived and carried out, giving credit to the park commissioners who had never refused support or money when he had made a call on them, and to his assistants in the work, for whatever measure of success had been achieved. He was now convinced by the great public interest displayed that there should be no park of any pretensions without a rose garden.

Robert Montgomery, Robert Scrivener, D. A. Dean, J. F. Coombs, Hugh Chesney, Mr. Weltborn, Carl Fohn, and others were all called upon and responded appreciatively, after which President Montgomery eloquently voiced the thanks of the visitors for their generous reception and the party then adjourned to view the electric fountain in Bushnell Park.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURALISTS

The Western Passenger Association, which controls the territory westward from Chicago and St. Louis to Cheyenne, Wyo., and including all points in Colorado, has authorized a rate of one and one-third fare on certificate plan, in cooperation with rate announced by the other Passenger Associations for persons attending the S. A. F. convention at Washington, D. C., August 15-18, 1905. This extends the concession to the whole territory from which members are likely to travel, with the exception of the Pacific Coast which is not under the jurisdiction of any Passenger Association.

Full instructions as to how to purchase tickets and secure certificates entitling the passenger to reduced rates will be published in the prospectus in July, and in all the horticultural trade papers.

WM. J. STEWART, *Secretary.*

THIRTIETH ANNUAL CONVENTION OF AMERICAN ASSOCIATION OF NURSERYMEN

West Baden, Ind., June 14–16, 1905

This meeting may be recorded as one of the greatest convention successes in the history of the association. The attendance was larger than ever before. About three hundred and fifty were present, not including a large number of ladies.

West Baden Springs Hotel proved a convenient and desirable place. The hall, hotel appointments, and service were excellent. The weather was warm, but so it was everywhere. This simply enlarged the attendance in the natatorium between sessions, and caused a heavier draft upon the various brands of mineral water.

THE PROGRAM

This was in the hands of an efficient committee, composed of Harlan P. Kelsey, of Massachusetts; H. C. Chase, Huntsville, Ala.; and John S. Kerr, of Sherman, Texas. It moved along with clock-like regularity under the guidance of Pres. E. W. Kirkpatrick, of McKinney, Texas.

Among the important papers, were "Soil Inoculation," by Dr. Moon, of Washington. Mr. Moon explained the work of the department in making pure cultures of beneficial nitrogen collecting bacteria, and showed the considerable increase of crop resulting from the introduction of these germs on leguminous plants not previously inoculated. There were two ways of securing inoculation: by seed and soil. Both were effective, but in using soil, care should be taken to avoid the transportation of parasites or noxious weeds, as nematodes or dodder, which latter often infests alfalfa fields.

The root knot of fruit trees was lengthily discussed by Mr. Hedgecock, special pathologist of the Bureau of Plant Industry. Mr. Hedgecock's studies appear to warrant the statement that the hard root knot of apple and peach is not infectious. He has nothing as yet to offer in the way of remedies.

The illustrated addresses of Assistant Secretary of Agriculture, Willett M. Hays on "Plant Breeding," and that by J. Horace McFarland on the Arnold Arboretum, were altogether delightfully instructive and suggestive. Mr. Hays drew especial attention to the important wheat breeding experiments under way in Minnesota, and Mr. McFarland showed the great æsthetic and economic value, presently and potentially, of the extensive collection of woody plants gathered at the Arnold Arboretum. Nurserymen and florists were urged to do their utmost to work for the perpetual preservation of this tree garden, which should last for a thousand years and increase in value each decade, but which was greatly in need of financial aid to render its future entirely assured.

REPORTS OF COMMITTEE

Among the important actions taken was the appointing of a committee to act with a similar committee of the American Seed Trade Association and the S. A. F. & O. H., for the purpose of securing parcels post and more equitable express rates.

TRANSPORTATION

This committee rendered a valuable report, and was given additional authority and urged to continue its efforts to secure a more favorable classification of nursery stock.

LEGISLATION

An effort is being made by this committee to draft a measure which shall cover the principal requirements of the fruit-shipping States, including the inspection, fumigation, and interstate shipping of nursery stock. If a federal bill of this comprehensive character is constitutional, a strong effort will be made to formulate the measure, with a view of securing its passage.

PLACE OF NEXT MEETING

Dallas, Texas — was chosen as the meeting-place for 1906. An enthusiastic band of Texans came up, and fairly captured the convention.

SPECIAL FEATURES

Among the side attractions were an instructive visit to the historic town of Vincennes, Ind., and the nurseries of Simpson and Reed in that locality; a trip to Mammoth Cave, Kentucky, was greatly enjoyed by forty or fifty, under the guidance of Mr. E. Albertson, of Bridgeport, Ind.; but the *pièce de résistance* was the closing banquet of Friday night at the West Baden Springs Hotel. This was as pretty an event as one could wish to see; the ladies, flowers, music, speeches, to say nothing of a splendid variety of native wines, were most inspiring and vastly enjoyed. This feature has come to stay, say the nurserymen.

OFFICERS ELECTED

Pres., E. Albertson, Bridgeport, Ind.; vice-pres., Orlando Harrison, Berlin, Mo.; sec'y, George C. Seager, Rochester, N. Y.; treas., C. L. Yates, Rochester, N. Y.

EXECUTIVE COMMITTEE

Thomas B. Meehan, Dreshertown, Pa.; Theodore J. Smith, Geneva, N. Y.; J. H. Dayton, Painesville, O. J. C.

HARTFORD FLORIST CLUB

Report of Committee on Window-box, Porch, and Veranda Gardening

Window-box, porch, and veranda gardening, it would seem at present, is within the threshold of a successful era in this country, and it seems strange that this effective and comparatively inexpensive method of beautifying houses, especially in cities, has not been long ago more universally adopted and advanced, considering the long standing of this art of gardening in European cities, which are annually visited by thousands of American tourists. True, our climate here is not as favorable to such gardening as it is in London, for instance, where window-boxes are in evidence the year around, receiving from three to four different fillings as the seasons call for the different varieties of plants; but cutting out the winter season, which with us is too severe to admit the use of such plants as aucubas, euonymuses and choice conifers as they are so effectively used in England, there is no reason why our windows should not be adorned with beautiful foliage and flowers in almost inexhaustible varieties, from the time when the crocuses and tulips break the ground, when pansies, forget-me-nots and daisies respond to the warmth of the welcome spring sun, to the time when Jack Frost, the unmerciful, bereaves our fields, parks, and gardens of the endless combinations of bright colors produced by plant life.

It may truly be said of most of our attractive cities that the creation and development of park systems all over the country, has had a very far-reaching, beneficial influence upon the beautifying of home grounds through the residential districts of these cities, and it is quite natural that it should be so. Indeed, it would be a strange, unresponsive, cold people that would not take its lesson so easily learned and within the reach of all; and the very fact that those lessons given have been so fruitful, bringing additional happiness and attractiveness to so many homes, should lead us on to further efforts to extend the cultivation of flowers at all seasons of the year at the homes of all.

The fact that the wind will blow the seeds of grass, of a shrub, or even of a tree into the smallest crevice of a stone pavement, a stone wall, or any almost inconceivable space, often too small to be noticed by the superficial eye, and that said seed will germinate and produce a plant which will live its term, should teach us that there is hardly a space or location which will refuse all conditions necessary to plant-life, but that on the contrary with the help of paintsaking care, adverse conditions can be overcome and plant life can be introduced and maintained everywhere where bareness otherwise rules supreme.

We see now here and there well filled window-boxes, and vases on porches and verandas along residential streets, on houses the front yards and often the back yards of which are already in themselves beautiful and attractive, and they are certainly becoming to the houses which they adorn, as tasteful and handsome as the architectural appearance and the surroundings of those residences may already be. Now if those floral ornamentations are well placed here and help to still more enhance the beauty of the already beautiful, how much more valuable must the same methods of beautifying and making more homelike the homes of all be, in those parts of a city where there are no attractive front yards, lawns, flowerbeds, shrubbery, and trees, where there are the barren, formal brick walls, or where even the elaborate creations of modern architecture are unable to overcome the monotonous and tiresome impression which prevails on every one in all the business and tenement streets of our cities. In other words, there is a way open and it should be taken advantage of to bring the gardening which we admire so much in the outer districts of our city, to all parts of the city, through our business streets to the homes of our less fortunate fellow-citizens, and the homes of those of our fellow-beings that have to live in the crowded tenement districts.

(Continued in next week's issue)

FUTURE EVENTS

The Massachusetts Horticultural Society hold a rose and strawberry exhibition in Horticultural Hall, June 24 and 25.

Newport Horticultural Society's great show takes place on June 27–29.

The American Association of Park Superintendents meet at Buffalo, N. Y., for their eighth annual convention, June 28–30.

The North Shore Horticultural Society have a rose exhibition at Manchester, Mass., on June 29.

OBITUARY

Leo Villner, brother of Louis Villner, the Walnut Hill florist, Cincinnati, has recently passed away.

Robert Wilkinson Furnas died at Lincoln, Neb., June 5, in the 82d year of his age. Mr. Furnas was for a long time identified with the Nebraska State Horticultural Society as its president; was vice-president of the American Pomological Society; was at one time brigadier-general of the Nebraska militia, and afterward governor of the state, and achieved success in every line of work that he undertook.

We are very sorry indeed to learn of the sudden death by accident on Saturday afternoon last of Mr. Harry T. Pearce, a young agriculturist of My Lady's Manor, Baltimore County, Md., while riding in an amateur race at Shrewsbury. Mr. Pearce was in the prime of life, being but 35 years of age. He was a son of Col. Jacob M. Pearce, who is one of the most prominent agriculturists in the State, and who was one of the Maryland Commissioners to the St. Louis Exposition. The horse which Mr. Pearce was riding fell, throwing the young man, fracturing his skull, after which he survived but a short while. We extend our sympathies.

Cut-Flower Market Reports

BALTIMORE The briskness of the early June market, due to the numerous weddings and commencements, has disappeared, and there is now no demand for any specialty. Local-grown roses are not up to the standard, and with the exception of a few Golden Gates and Meteors the stock is poor. The best stock of American Beauty comes from the North, as is the case with lily of the valley. Carnations are on the decline and sweet peas, which have been the leaders, are approaching the end. Harrisii and callas are very abundant, but there are few calls for them.

BUFFALO The past week has shown little change, but the ending was satisfactory, considering the amount of stock on hand. Home-grown pæonies are at their best, and a good supply is being received daily. The hot weather opens them too fast for shipping purposes, therefore many are carried over and disposed of at low prices. The demand for roses is causing a scarcity of select stock, and Beauties are selling brisk. In carnations low prices rule on ordinary stock, but fancy moves well. Sweet peas are in good demand, but quality poor, owing to damp weather prevailing.

On Monday graduation is in order, and a good week's business is looked for.

CHICAGO The summer weather brought on an immense supply and prices took a tumble. Demand lagged, independence was apparent in buyers' actions. They felt that there was no necessity for haste and consequently the trading was extended over the entire day; and they hammered prices, greatly to the distress of the growers, who saw their commission men forced to accept big declines. Quality on Brides and Bridesmaids is very common. Kaiserin Augusta Victoria is still in limited supply, however, and fills the call where something choice is wanted. A healthy demand exists for Liberty. American Beauties this week reached the $4 mark, and the number of receipts at this figure were few. The quality was not good, this fact being a contributing factor toward advancing values on the choice grades. Rose Richmond is promised in five weeks. The weak spot of the market was carnations, ordinary grades being again in numbers beyond the trade requirements and some sellers were forced to the mercy of the Greeks. The happy faculty of adjusting their desires to the supplies is something in which the Greeks show a masterly art, and, while in other branches the law of supply and demand is assumed to be a natural one, it seems to lose its force and become partially inoperative when it comes in contact with the immobile street venders. This apparent paradox was exemplified this week. The Greeks are the final arbitrators of prices, and sellers were forced to submit to the Greeks' terms with what grace they could. Pæonies have shortened up. White has advanced. The bulk of supply comes from storage, which promises to hold out until July 15. Sweet peas are in heavy supply. Gladiolus is offered by several houses. Demand on lily of the valley fell far below that of the past week. Lilies and auratums are equal to demand. Ferns are excellent in quality. The best white carnation in this market at present is Boston Market. Dahlias, centaureas, coreopsis, gladiolus, and water lilies can be had of HORTICULTURE's advertisers.

CINCINNATI Most of the retail stores have been kept busy of late with wedding and commencement orders, which, in turn, used up all available good stock. Roses and carnations sold well, the former being a little scarce, and commanded a good price, considering the quality, as the greater part were badly mildewed. Some good Kaiserins have been coming in, and were eagerly sought after. Green goods plentiful, but sell readily.

LOUISVILLE Business conditions the previous week were a little slow. Carnations are satisfactorily demanded, but the quality is not very good and the supply is limited. Roses sell well, but are of inferior grade. Sweet peas of fine quality are abundant enough to meet all demands.

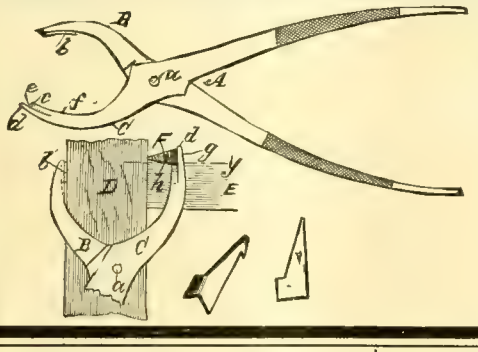
J. D. Carmody, of Evansville, Ind., and J. A. Peterson, of Cincinnati, O., were recent visitors.

MONTREAL The cut-flower trade in all lines has been well maintained. The late quarters of bedding stock in frames are being used to pot off small ferns. They do much better here than in the house, if kept well ventilated and densely shaded.

In Mrs. Moulson's garden the new Anthericum liliastrum major is showing fine spikes of flowers. It is a capital thing either for vase or bouquet work. Incarvillea Delavayii is also in flower. It may be of interest to note that this fine plant appears to stand Canadian winters safely when planted in a dry position. It makes an excellent pot plant, too, for early spring display.

NEW YORK Nearly all grades and kinds show the effect of the weather, which has been hot and cool by turns. There are some Beauties grown for summer trade, also Killarney, Carnot, Kaiserin, and Liberty, that are of excellent quality. Trade in general is very quiet and the greater share of the flowers coming into this market have been disposed of in bulk at anything but remunerative figures. Carnations are extremely plentiful and cheap, a very small proportion bringing a price. Outdoor stock is less abundant.

PHILADELPHIA The best that can be said for the market the past week is that it was fair for the season. Stock of all kinds was plentiful; but the most of it was away below high water as to quality. In American Beauties, for instance, there was any amount of poor stock around, but really first-class grades were few and far between, and the same may be said of Brides and Bridesmaids, only more so, as much of the latter was badly mildewed. An exception was noted in some lots from New England, which showed good clean foliage and excellent size and form. Liberties, better quality than much of the other local receipts, and Kaiserins, very good at present. Carnations, very plentiful, no reasonable offer refused. Pæonies are about over here, although we still see some good ones at Pennock's; these are probably from New England points. The lily of the valley market is rather overstocked at present; but quality is all that can be desired. Sweet peas badly overstocked and almost impossible to move them at any price. Lilium candidum is in and finds favor among the critical buyers. Delphinium formosum and Japanese iris are in demand as attractive and inexpensive window decorators, and are useful in other ways. Achillea and matricaria are plentiful now, and find favor for funeral work. Very few orchids — mostly cattleyas.



BUSINESS CHANGES

Crittenden & Daniels succeed Williams & Crittenden at Waterloo, Ia.

Howe & Taylor's wire-work factory at the Growers' Market, Chicago, was sold to Joseph Kubita, of New York, on June 12.

After the misfortune of two fires, the New London florist firm of Pratt & Giger has gone out of business. — *Norwich* (Conn.) *Bulletin.*

A. H. Hews & Co's flower pot manufactory has again started up after a shut-down for repairs to the building and will now run over-time in getting ready for the demands of fall trade. W. A. Hastings, who has been salesman for H. Rogers, South Sudbury, has been secured as traveling salesman for A. H. Hews & Co., in western territory.
